1. It has been evident for some time in S&T that a system must be devised to permit accurate and closer progressing of the movement of supplies.

Under present conditions too many transactions are in progress about which too little information is known.

It is difficult to establish finality in any particular transaction.

Too many letters are written and then lost to mind in the files.

Incoming information from LO's is difficult to relate to the initiating instruction etc. etc.

2. I have accordingly devised a system which will be adopted by S&T but, as it may be considered of general value to MMIA as a whole, have withheld publication until it has been viewed by those interested.

3. The basis of the system is the "Movement Order", specimen attached.

4. I suggest the matter be discussed round the table, when the working system I have in mind can be explained.
