FROM : ROME Commissariat Directorate

TO : Pro-memoria for Capt. HART DYKE 7 Dec 45

SUBJECT:- Accounting arrangement for 2.20 qls of flour.

On 14 Dec 44 at the Rome Military Bakery, via dei Sardi 44, 2.20 qls of flour were stacked accumulated during previous months and obtained:

a) by daily sweeping of the floors of the dough-mixing shop, which takes place after work is finished;
b) by shaking of sacks;
c) by dusting and scraping of leavening tables, of kneading troughs and of mixing-machine.

This flour being mixed with dough clots and having been collected on floors was not fit for consumption but it could be utilised for glue.

We therefore pointed out thid matter to the Ministry of War who in letter 14229/S/1 of 19 Dec 44 authorised the issue of the whole quantity to the Military District of Rome 2.

Being an Allied provided item the accounting in respect of, which due to its condition had been disposed of in a different way than usual, it is necessary to arrange the matter formally, according to the procedure laid down recently and which did not take place as it had not yet had a practical application.

Therefore, in accordance with verbal agreements with Commissariat Officer member of the Analysis Commission we ask to arrange the matter including the 2.20 qls of flour in one of future Analysis reports for damaged commodities.

1. A Report is submitted on certain facts that have arisen as a result of analysis Commissions held recently in the Italian Botany and Supply Depots in Rome. This report is forwarded for information and such action as you may consider necessary.

2. On or about 23 Oct last 22,270 lbs of flour were submitted to the Commission for condemnation. The flour, received as part of a large consignment ex U.S. Q.M. depot Naples, had been dranged by rain water. I was not satisfied that the whole of the quantity submitted for condemnation was unfit for human consumption so requested that a sample be analysed and that an additional test should be made by baking a small quantity of the flour. Subsequently a further commission attended by the director of the Italian laboratory was held and he undertook to arrange for an officer of his laboratory to supervise the extraction of such flour as was fit for human consumption.

3. On 24 Nov this had been completed and it was then found that of the original quantity of 22,270 lbs, 17,331 lbs had been passed as fit for human consumption leaving only 4,939 lbs to be condemned.

4. On 24 Nov sixty sacks containing 12,007 lbs peas were submitted for condemnation. A detailed examination showed that 3,635 lbs, the contents of 19 of these sacks were in fact fit for human consumption.

5. The inference to be drawn from these two cases would appear to be that insufficient interest is displayed in these depots with a view to preserving for human consumption the maximum possible quantities of food commodities which, as is generally known, are in exceedingly short supply.

SUBJECT:- Damaged Pasta.

(Pro-memoria to Allied LO)

Damaged commodities examined by Allied MMIA LO on 9 Nov 45.

Pasta . . 445,200 kgs
equal to 983 lbs

The Commission has stated that said flour is unfit for human consumption.
It is however fit for animals (swines, poultry, etc).

Said amount of pasta is the result of an accurate selection of about 500 qls of pasta, which was received wet from MMD and immediately issued for consumption (the wagons which contained it did not guarantee the impenetrability of rain during the journey).

Derrate avariate esaminate il giorno 9 corr. m. dall'Ufficiale Alleato di collegamento M.M.I.A.:

Pasta s/c 10 per kg. 445,200
pari a lbs. 983

La Commissione ha riconosciuto che detta pasta non é idonea per l'alimentazione umana. E' però alibile per determinate specie di animali (suini, animali da cortile, ecc.).

Detto quantitativo di pasta proviene da una accurata ed attenta selezione di circa 500 qli. di pasta giunta bagnata da Bari e subito immessa al consumo (i vagoni che la contenevano non garantirono l'impenetrabilità della pioggia caduta durante il percorso).

1. On or about 12 Jan 45 you informed me that you had many cases of P.Meat which you suspected as being bad.

2. It was then arranged that 1 tin per case be taken by your analyst for examination, and a report made by him.

3. I was yesterday handed a report from your analyst in which only ten tins have been reported as having been opened, whereas in the same report there is mention of 392 cases.

4. It therefore follows that 392 tins should have been examined, and do not propose to hold a Commission until they have been so examined and reported on.

5. I return your Analyst's report which I notice is stated to be in the form of a "Commission". I have to point out that Commissions for examining suspected food are held in accordance with my HQ's ST/77 dated 20 Oct 44, to War Ministry, the contents of which have no doubt been communicated to you.

Le dieci scatole, prelevate da una partita di carne scatolata di provenienza alleata ritenuta avariata perchè bagnata, sono state anzitutto private delle etichette di carta da cui sono avvolte ed accuratamente esaminate nelle condizioni del guscio.

Si è notato che tutte le scatole presentano chiazze più o meno estese di ruggine e che nelle dette scatole, restituite a codesto Magazzino questa era penetrata in profondità al punto di bucare la latta.

Osservando infatti, meglio con l'aiuto di una lente di ingrandimento la superficie delle scatole si notano, in corrispondenza delle zone arrugginite, dei piccoli fori dai quali si può notare la fuori uscita dell'aria facendo pressione con le dita sulle pareti delle scatole stesse.

Si è osservato inoltre che, su dette scatole perforate, una sola risulta perforata in un fondello, mentre le altre risultano perforate nel corpo il che fa presumere che l'etichetta di carta abbia favorito, forse col mantenere l'umidità, la formazione della ruggine e la ulteriore perforazione.

Il contenuto di queste scatole, pure non essendo in stato di putrefazione, indubbiamente ostacolata dall'attuale rigida temperatura, si presenta però in evidente stato di avaria.

Le tre rimanenti scatole e le quattro successivamente prelevate tra le scatole non bagnate, sono state tenute in termostato a 40° per tre giorni: Una scatola si è rigonfiata. Le rimanenti hanno conservato la loro forma originale ed, all'apertura, non si è notata fuoriuscita di gas.

Le prove biologiche eseguite sul loro contenuto non hanno dato inconvenienti di sorta.
