File No. 6130

Palermo, 2 May 46

Subject: Rat-traps.

To : Col. MacDonald - U.N.E.R.A. Palermo

The Provincial Medical of Messina has given me the following information which I pass to you:

"Following the information given with letter No. 305 dated 16.Jan.46 this office cared to put into the warehouses of the Allies for the Marine defence, 15 rat-traps.

The result is that, by order of an English sergeant and the marine medical guards knowing nothing about it, eleven of these traps were put up-on some rafts placed on the defence pier.

When the rafts went the personnel did not think of returning the traps. It is therefore retained that they cannot be recovered again, even because the local Allied Authority, leaving Messina, turned over the Naval Base to the Italian Marine.

We are informing you about it even to add the traps to the lost material list.

The Provincial Medical
s/Dr.Cotta Ramusino Ferruccio.

MALARIA - PRECAUTIONS

Reference your letter on this subject dated 23rd April, 1946 the following is the position regarding malaria incidence and precautions in Sicily.

The incidence of malaria varies widely in the different districts of the island according to the nature of the country. Benign tertian malaria exists in many places between the months of May and September and occasional cases of malignant tertian occur in highly malarial zones during the months of July and August.

Highly malarious zones occur in the plains of Trapani, Catania and Fiumefreddo, near Taormina, together with other small coastal areas near Syracuse, Pachino and on the west coast. Most coastal areas are mildly malarious including the Palermo area.

It is advised that all British personnel shall take suppressive mepacrine in accordance with GRO 249/266 para.252 sub. para.3(g). Mepacrine tablets will be issued in future direct from medical sources and a monthly demand of expected requirements will be rendered to this unit. It is requested that accurate estimate be calculated to avoid wastage of this drug.

All British personnel shall also take other personal precautions such as mosquito nets and long slacks and sleeves one hour before sunset and one hour after sunrise.

23 April 46.

To : Officer Commanding,
British Troops Sicily.

1. There is evidently some doubt as to whether or not PALERMO is a Malarial area. Italian Army doctors state that it is not.
2. In order that efficient anti-malarial precautions may be taken by this unit could authoritative confirmation please be given on this matter with regard to PALERMO and the remainder of the Island.
3. Information is also required as to whether personnel of the unit are authorised to take suppressive zepacrine in accordance with G.R.O. 249-266 para 252 sub para 3 (g).
