Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28°C. The cell concentration was adjusted to 10⁸ cells/ml. The cells were then mixed with the plant tissue and incubated for 24 h at 28°C. The plant tissue was then cultured on the selective medium for 2 weeks. The transformation efficiency was calculated as the number of transformants per 10⁸ cells/ml of *Agrobacterium* suspension. The data are the mean ± SD of three independent experiments.

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 101. The concentration of the *Agrobacterium* strain 101 was varied from 10 to 1000 cells/ml. The transformation efficiency was determined by the number of transformants per 100 cells. The data are the mean $\pm$ SD of three independent experiments.

Ref your CRE/RDS/270 of 23 Jan 45.

1. It is noted that repairs to rds referred to in para 1 are being carried out by contract.

It would be appreciated if the work on the rds could be started from :-

- (a) Rd - The junc of Route 2 map ref E.6679 and work toward BRACCIANO.
- (b) Rd - The junc of BRACCIANO Rd map ref 6183 and work toward CESANO.

2. Ref your para 2. Your suggestion for having this br adjusted by trainee engr is being examined by the Trg Staff. It is pointed out however that it is not expected that there will be suitable personnel available for this work for at least six weeks.
