To: His Excellency Facchinetti - M.of A.

Date: 21/11/46

I, the undersigned Maria ESPINOSA, beg Your Excellency to hear my plea and assist me.

My son, Lt. ESPINOSA Ipparco, 1918 class, joined the Army on the 4/9/40. - On the 1st January 1941 he was transferred to n° 75 P.O.W. Camp at Torre Fresca (Bari) as an officer interpreter of the English language, where he remained until the 8th Sept. 43. After said date, he joined the 7th Army until the liberation of Rome. He was demobilised at the beginning of 1945. - He then remained at home in order to complete his studies of "Economic Science at the University of Bologna" until the 14th February 1946. On said day he was arrested by the British Police in order to testify to several incidents which took place in n° 75 P.O.W. Camp during his stay there. After 8 months in the POW Camp of Afragola he was considered a war criminal and during a period of 11 days he was tried and sentenced to 3 years imprisonment for an incident which never took place.

I have at everybody's disposal - documents, copies of the trial, testimony of Senior officers, which confirm my son's innocence.

I ask Your Excellency's intervention in order that my son's case be brought to light, as he cannot, and must not, serve an unjust sentence. He is a youth that has sacrificed everything for the Motherland, and for Britain who is now killing his soul and also his parents who are aged and have suffered much during the war.

Have pity for this unhappy family and if you think it advisable I am prepared to forward all the documents in order that you may be fully informed of the case in question. -

General Information

DATE: 12/13/2015

Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included a combination of aerobic and resistance exercises. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during the training sessions. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR increased significantly during the training sessions, and the EE increased significantly during the training sessions. The control group showed no significant change in HR or EE. The results suggest that a 12-week training program can improve the HR and EE of sedentary, middle-aged women.
