HEADQUARTERS, ALLIED COMMISSION  
Navy Sub Commission APO 394.

NSC/2101.  
21st April, 1945.

FILE

From : Navy Sub Commissioner, Hq., Allied Commission.  
To : Flag Officer, Northern Area, Mediterranean.  
(Copies to : - Flag Officer Taranto, Adriatic and  
Liaison, Italy.  
British Naval Liaison Officer,  
Maddalena.)  
Subject : Rat Control.

With reference to your minute No. 546-1 of the 6th April, 1945, the responsibility of conducting a campaign against rat infestation rests with the Public Health Division of the Italian Ministry of the Interior and requirements of stores poisons etc., should be obtained by the Public Health Authorities at Maddalena by arrangement with the Ministry of the Interior.

2. It is desired to mention that, with the turnover of administrative functions to the Italian Government, it is the policy to encourage the Italians to undertake the solution of their own problems through the appropriate departments of state. If, as may be the case in this instance, the problem of combating rat infestation is essentially one for the Italian Naval Authorities as opposed to the civil administration, their requirements should be communicated to the Ministry of Marine who will, if necessary, seek allied assistance.

SEARCH AND KILLING - STORMS.

The Italian authorities at Maudalena are anxious  
to have a campaign against rats but have no local resources,  
either in rat poison or traps.

2. While the rats are not a direct menace to the Allies,  
they are an indirect one and it is requested that consideration  
may be given to retaining poison and traps from Allied sources  
for use here.
3. If a quantity of D.D.T. powder, or solution, is also  
available, a supply of this would be of great assistance.
4. The population involved is about 10,000.

AG 726.1/352 R-0

SUBJECT: Control of Venereal Disease.

TO : All Concerned.

1. Responsibility for Control and Prevention of Venereal Disease: The control and prevention of venereal disease is the responsibility of the commander of each echelon as well as the responsibility of the individual who has exposed himself to the risk of infection. In discharging this responsibility each commander must take full advantage of every facility at his disposal, whether military or civilian, and must coordinate the activities of the appropriate staff officers of his command to effect accomplishment of the desired result. The following suggestions for appropriate officers are furnished for guidance and vigorous accomplishment by all echelons.

2. Special Service Officer: a. Clean, active, sound minds and bodies of the members of a command are of primary importance in the endeavor to control venereal disease. Outdoor exercise should be encouraged at all times and facilities and equipment provided therefor. Particular stress should be placed on competitive intramural athletics such as boxing, baseball, softball, volleyball, track and swimming to engender a spirit of friendly competition and team play.

b. Stress should be placed on providing interests or facilities to fill leisure or "off duty" hours. Day rooms should be designed as places of relaxation. Size and location must of necessity vary with the strength and location of the unit but every effort must be made to make them pleasant, habitable, well lighted and ventilated. They should be stocked with chairs, tables, writing materials, books, radios, and games. Day rooms can be established and dismantled quickly and require a minimum of supervision. They should be established and maintained by all units down to the lowest echelon.

c. Full advantage should be taken of entertainment and recreational facilities furnished within the theater. Sports, entertainment, motion pictures, sightseeing and the facilities and opportunities offered by the American Red Cross should be publicized and made available to as large a proportion of the command as is consistent with available facilities and performance of military duties.

4840  
3. Morale Services Officer: The planning of orientation programs and the dissemination of guidance and materials toward their realization is the responsibility of the Morale Services Officer. The proper maintenance of morale is a responsibility of command. Commanding officers should make full use of the facilities provided by the Morale Services Officer for programs which will enable military personnel to acquire and maintain greater understanding and appreciation of their part in the war effort. Group discussions, lectures, use of orientation

## R E S T R I C T E D

Ltr, Hq NATUSA, AG 726.1/352 A-0  
Dated 12 September 1944 (Cont'd)

Films and other orientation activities may well be scheduled in off duty time, as well as in the duty time allotted, to gain full benefit from hours which might otherwise be lost to a majority of the command or might be devoted to undesirable activity. The wide educational opportunities, available to all military personnel through the United States Armed Forces Institute, should be stressed for maximum participation.

4. Chaplain: Information concerning religious services and programs should be widely disseminated and personnel encouraged to attend. The unit commander should make full use of the Chaplain's advice and aid in handling individual cases which do not respond to "group treatment". The Chaplain's civilian contacts should be utilized freely as a means of introduction into the homes of the local inhabitants to provide wholesome contacts for military personnel.

5. Provost Marshal: Close cooperation with the civilian authorities is necessary in any effort to control venereal disease. The Military Police should be informed of the existence of houses of prostitution by reports on sources of infection made to them through Medical channels. Establishments determined to be houses of prostitution may be placed "off limits" at the discretion of the local commander concerned. Roving patrols should be used wherever necessary to keep prostitutes away from camp sites.

6. Surgeon: a. Prophylactic Stations should be established both in unit and metropolitan areas in locations permitting the maximum accessibility. These stations will be under the control and supervision of the Surgeon of the command, operated by enlisted men specially trained for those duties and available at all times to all military personnel desiring prophylactic treatment. These stations will be clearly marked, well lighted and special attention will be given to cleanliness and the availability at all times of hot running water. Reference letter, this headquarters, AG 726.1 SURG-0, subject: "Venereal Disease Control", dated 12 July 1944.

b. Schools under the supervision of the Surgeon should be established to insure that adequately trained attendants are available for operating prophylactic stations. The course should consist of lectures on anatomy and physiology of the genitalia, talks on Gonorrhea, Syphilis and Chancroid (means of transmission, identification and effects), preparation of the chemicals used in prophylaxis, technique of administering prophylaxis, and a seminar in which frank and open discussions take place between the students and the Venereal Disease Control Officer. Reference paragraph 4 b(8), Circular letter Number 33, Office of the Surgeon, this headquarters, cs.

c. Individual prophylactic supplies will be distributed freely to all individuals desiring them. The attention of all commanders is directed to Section IV, Circular 12, this headquarters, cs, as amended by Section III, Circular 31, this headquarters, cs. All individuals of the command should be instructed in the advantage of the use of the mechanical prophylaxis or condom when followed by a properly administered prophylaxis.

R E S T R I C T E D

Ltr, Hq NATOUS, AG 726.1/352 A-O  
dated 12 September 1944 (Cont'd)

7. The Individual: a. The responsibility for the control of venereal disease is also that of the individual. Once he has exposed himself to the risk of infection he must employ as a measure of protection such prophylactic materials and facilities as are available. If he has reason to believe that he has contracted a venereal disease he must report that fact to his commanding officer immediately so that he may obtain proper medical attention.

b. Venereal disease will be controlled only when both the individual and the unit commander assume and implement their full responsibilities in this respect.

Allied Control Commission,

Room 32, SALARIO,

16th March 1944.

Dear Comander,

With reference to medical supplies to Italian forces including the Navy, the medical authorities of the A.C.C. state: "permissions should be sent in on a form to be supplied, addressed to A.C.C. the pertinent sub-commission will scrutinize them, and pass to the Medical section, who will professionally vet them, and arrange supply. Recipients should state the ship or unit required for, and the place or port where they should be sent."

This information was given by the Major who you saw during your visit here, but perhaps you arranged bulk supplies to the Italian Naval authorities when you visited Lecce.

Note you had a more comfortable journey on your return through southern Italy. Things are still a bit confused here, and now that Russia and Italy are to exchange diplomats, except they will eventually have a council of diplomats, representing all the allied nations! That might eliminate the A.C.C.!

Yours sincerely,

Major Gen. G. E. R. D. FOULKE  
A.C.C. Medical Officer.  
Algiers.

APO No. 794, US ArmySUBJECT: Defensive and Offensive Methods of Mosquito and  
Malaria Control.

TO : All Units, R. A. A. C.

1. All unit commanders will enforce the following regulations within their respective commands, in order to destroy adult mosquitoes which are now present throughout the Rome Area, and offer a serious menace to the health of our troops in the area, by the dissemination of malaria.

- a. The use of the mosquito net.
- b. The wearing of long trousers and shirt sleeves rolled down after sunset.
- c. The use of mosquito repellent beginning at dusk.
- d. The continued use of atabrine (mepacrine).
- e. The destruction of adult mosquitoes.
  - (1) By the spraying of all billets nightly.
  - (2) By the spraying of culverts, pig styes, cowsheds, stables and any such place that presents a cool darkened hiding place for the mosquito, in daytime.

2. These offensive methods must include all areas within two kilometres of bivouacs outside towns.

3 May 1944

SUBJECT: Malaria

TO: All Personnel.

The following is extracted and republished from 94th Sub Area Routine Orders, dated 28 April 1944 for the information and guidance of all personnel of this headquarters.

1. Malaria is one of the most important health problems in the Mediterranean theater of war. During the 1943 malaria season the disease seriously reduced the efficiency of all units that failed to take adequate anti-malaria precautions. Owing to the slackness on the part of officers and men alike, the Sicilian campaign was greatly handicapped by a high rate of malaria casualties. It is estimated that this rate rose to ten times the figure that would have occurred had orders been obeyed.

2. The whole of the mainland of Italy may be regarded as malarious in some degree. This Sub Area is divided at present into malarious and one highly malarious area. The extent of the highly malarious area is set out below:

3. Boundaries of Highly Malarious Area in 94 Sub Area:

NORTH, Road S. LEMO, ERGIL (N) COMMUNI (N)

EAST, Easting grid line 6,00

SOUTH, Northing grid line 11,00

West, Easting grid line N,70

4. Commanding Officers are reminded that they are responsible for the health of their men and that they will incur a grave responsibility should they neglect to enforce orders on the subject of malaria.

5. Basic Personal Anti-Malaria Precautions:

The following precautions will be taken by all ranks throughout the Sub Area w.e.f. 7 May 44:

- (a) All ranks will sleep under mosquito, or sand fly nets.
- (b) All ranks will wear, between sunset and sunrise, long trousers and shirt, fastened at the wrists and neck.
- (c) Guards, and others on night duty, will apply anti-mosquito repellent to exposed portions of the body every four hours between sunset and sunrise.

6. Extra Personal Anti-Malaria Precautions:

The following additional precautions in Highly Malarious areas in the Sub Area will be taken by all ranks w.e.f. 7 May 44:

- (a) All ranks will take one tablet of meprazine daily.
- (b) All ranks will wear, between sunset and sunrise, boots and anklets or puttees.
- (c) All local habitations will be out of bounds between sunset and sunrise.

~~RESTRICTED~~7. Anti-Malarial Precautions in tents and Buildings

- (a) All tents and occupied buildings will be sprayed with anti-mosquito spray once daily.
- (b) In highly malarious area, spraying of sleeping accommodation will take place twice daily, once in the morning and once in the evening, an hour before sunset.

8. Unit Orders:

Osc of all units will issue orders for carrying out the above precautions and will particularly ensure that the following items are properly covered in them:

- (a) Notes. That regular and frequent inspections are carried out to see that notes are properly used and kept in good repair.
- (b) Dress after dark. That the orders given are carried out without fail and no relaxation is permitted for any reason.
- (c) Repellent lotion or ointment. That application of repellents is carried out under the supervision of an officer or NCO.
- (d) Mepacrine. That a parade under an officer, a CO, is held for taking mepacrine.
- (e) Spraying of buildings and tents. That regular and frequent inspections are made to see that this is carried out.
- (f) Officers. That anti-malaria orders are quite clearly made applicable to all officers, as well as other ranks.

9. Punishment:

Osc will treat disobedience of anti-malarial orders as a serious offence and will not hesitate to take disciplinary action against officers and other ranks in respect of any such disobedience."
