COST OF LIVING - ROME

June 1944. July 1945

UING - ROME

July 1945

Translator LA PORRAC'

GENERAL LABOR CHAMBERECONOMIC INFORMATION

Nº 1 (25/6/44)

Cost of Living the following statistics refer to the present period and to a worker's family made up of a husband, wife and three children of minor age.

WEEKLY AVERAGE EXPENSE

|                                |            |         |
|--------------------------------|------------|---------|
| <u>FOOD</u>                    | L. 1 109,- | 76,10 % |
| <u>CLOTHING</u>                | " 141,-    | 9,70 %  |
| <u>RENT</u>                    | " 49,50    | 3,40 %  |
| <u>HEAT AND ELECTRIC LIGHT</u> | " 4,50     | 0,30 %  |
| <u>MISCELLANEOUS</u>           | " 154,-    | 10,50 % |
|                                | L. 1.458   | 100 %   |

Illegal Market These statistics make it clear that the 86 % of the total expense is due to the black market (the 44,72% of food stuffs are bought at the black market).

Firm Messes The Labor Chamber's interest for the firm messes are bringing good results. From 5 June to 30 June 23 requests for setting up new messes have been submitted from the Labor Chamber to the S.E.P.R.A.L.

For the setting up of new messes the firms must send their requests in duplicate copy to this Labor Chamber specifying :

- 1) The seat of the firm
- 2) The location of the mess
- 3) The firm activities
- 4) Type of mess (workers or employees)
- 5) Number of workers or employees lunching.

In every mess a food stock record must be kept and the names of the workers or employees eating at the mess must also be registered.

The firm commissions will check and sign the above registers

.//.

5813

2)

monthly and will also see that the cooking, preparation, distribution and payment of food is properly made.

Every firm commission is begged to nominate a member who is to act as liaison with this Labor Chamber for all matters concerning the firm mess.

#### FOOD SUPPLEMENTS FOR WORKERS

1) Normal Supplements - In these days the Food Card Office had asked some workers who were after bread supplements the estimate seen by this Labor Chamber.

It is stated that the misunderstanding has now been cleared:

Workers that are entitled to the normal work supplements must address themselves to the Food Card Office (Via dell'Ara Massima) from which they will receive the supplement cards.

The worker must always carry with him a declaration of the firm proving that he is actually working.

#### 2) HEAVY AND VERY HEAVY SUPPLEMENTS

To obtain heavy and very heavy supplements the procedure is the same as above only the address in S.E.P.R.A.L. Via delle Grazie n° 3.

The Confederal Labor Chamber

ECONOMIC INFORMATION

Nº 2 (19/7/1944)

COST OF LIVING AND SALARIES

The statistics of Economic Information Nº 1 of last June referring to the cost of living must be compared with the cost of living of the past.

|                   | <u>Nov.</u><br>1940 | <u>Nov.</u><br>1943 | <u>April - May - June</u><br>1944 | Average of |
|-------------------|---------------------|---------------------|-----------------------------------|------------|
| Worker's family   |                     |                     |                                   |            |
| weekly expense L. | 194,-               | 805,-               | 1.458,-                           |            |
| index number "    | 100,-               | 420,-               | 751,-                             |            |

This shows that from Nov. 1940 to this day the cost of living has increased 751 %.

A look at the quantities used makes it clear that the firm messer and popular messer have been of great help to the workers food problem.

In relation with these results the Labor Chamber has discussed the question of salary increases.

The workers' organizations had to consider only one fact; with the actual salaries it is not possible to keep up with the cost of living. Therefore, only salary increases can help to better this situation.

If the authorities and the Government make it possible to reduce the cost of living the workers organizations will surely adapt themselves to the new situation.

A number of discussions have been carried on about the salary increases. However the fact is that to meet the high cost living a worker ought to receive 1400 - 1450 lire weekly.

Unemployment disoccupation is still high.

Although no statistics can now be furnished, the most important and largest firms of the city are closed or are working on a small scale.

(2)

The large and medium size firms are in crisis while the small ones are starting to work again .

The want of products and the large amount of available money in circulation raise the demand which only the small industries and artisan shops manage to satisfy. On the other hand a legal and illegal transport business is going on with all the products which can be brought to Rome from the freed regions. These are good times for the commercial people, for the small industries and for the artisans.

These three categories seem to be in a very good position, because salaries are low, the large industries are in crisis, workers are available, and market prices are high.

This particular economic situation is however the most unfavourable for the working classes which has to meet the continuous raising of prices by selling silverware, by making debts or by dealing with black market operations.

Salary increases and disoccupation are the very most important problems of the day. Nevertheless we cannot speak of salary increases if the number of employees and workers is not raised.

However the Labor Chamber thinks that the salary increases do not harm the employment problem. Therefore the action undertaken to increase salaries is completely independent from the actual disoccupation.

Herewith attached are some statistics on the cost of living.

Translater LATOP CA

NOTATIONS OF THE TABLES ON THE COST OF LIVING IN ROME

Attachment A) Situation of the cost of living in Nov. 1940 of a medium worker's family (5 people i.e., parents and three children of minor age). Such an investigation was carried out starting from pre-scheduled consumer needs considered as medium for a worker's family. On these consumer needs of fixed quantities the well known market prices of November 1940 were applied.

Situation of the cost of living in Nov. 1943 (always considering a medium sized worker's family). Even these statistics were drawn up applying to the fixed quantities prices of November 1943.

In this second table there is no distinction between black market and rationed food stuffs and therefore the quantities and the values are total.

Situation of the cost of living in April, May, June 1944.

The new food situation did not permit to start from a fixed quantity that the worker could not buy anymore because of its price, and that many times was not found in the black market.

It seemed advisable instead to consider the worker's family situation as it really was and to establish -without referring to statistics - the quantities bought and the prices paid.

It was then decided that the investigation should be carried out on two normal worker's families. The two families at the end of the week put down on a specific form the list of the quantities and expenses made during the week.

Contemporarily the forms are given to the housewife of the family on which the investigation is carried out; the housewife speaks to the statistician personally to furnish him all the explanation necessary to give the finishing touches indispensable for every single expence.

The elaboration of the statistics gathered in this manner gives a truer picture of the actual expenses of the two families.

The objection that a more careful and extensive investigation could bring about better results seems to be correct for the present period in which the market situation the quality of goods, the quantity of consumer needs and prices fluctuate so frequently;

(2)

hence there is no possibility for the statistician to check every single family expense at the moment the form is turned in.

The Labor Chamber believes that the method may be considered adequate to the situation and sufficiently nearer to reality. Naturally as soon as possible the investigation will be carried out more extensively i.e. on five workers families.

#### NOTATIONS FOR ALL THE TABLES

No indications have been given to "quantities" relative to clothing - rent - light - etc. The quantities concerning food stuffs have instead been strictly detailed.

Every column has two sub sections distinguished by letters "q" and "p" which respectively stand for "quantity" and "price".

As a unit of measure the kilogram will be used for all solid stuffs (and for oil), the liter for liquids, number for eggs, for messer (the number of plates).

The mess soup is considered rationed food.

#### TABLES RESUMING QUANTITIES AND VALUES

It was believed to make tables resuming quantities and values in order to make a comparison between the various periods of time.

## SUMMARY OF A WORKERS FAMILY EXPENSE

SUMMARY OF THE QUANTITIES USED IN NOV. 1940

Nov. 1940 - April - May - June 1944

|                                       | Nov. 1940<br>and<br>Nov. 1943<br>(1) | April 1944 | May 1944 | June 1944 |
|---------------------------------------|--------------------------------------|------------|----------|-----------|
| Black Market and<br>Free Market       | Kg.                                  | 15,741     | 20,476   | 17,300    |
| Rationed Food                         | "                                    | 36,930     | 13,031   | 8,566     |
| (2) Weight of the<br>quantities used  | "                                    | 36,930     | 28,772   | 28,757    |
| Popular Messes and<br>Firm Messes (2) | nº                                   |            | 6,-      | 25,245    |
| Total weight of<br>quantities used    | Kg.                                  | 36,930     | 30,572   | 36,615    |
|                                       |                                      |            |          | 32,994    |

- (1) The quantities between Nov. 1940 and Nov. 1943 do not result in variance because the rivation method is based on fixed quantities and on varying prices.
- (2) The Firm Messes and Popular messes have given great help in diminishing the consumers needs of 1944 in respect to the past years. The soups have been counted considering them of 300 gr. each.

PRESENT COST OF LIVING IN ROME AND NAPLESLIVE/DUCTS

1. The cost of living figures that have been obtained to date are insufficient to make any final decisions on the subject but they do provide evidence of two very important facts  
a) The comparative cost of food in Rome and Naples  
b) That many working class families in Rome must be suffering from malnutrition.

ROME

2. The information from Rome is divided into two parts  
a) A study made by the Central Institute of Statistics to determine the minimum daily cost of food for a Roman family of four  
b) The weekly budgets of twelve working class families.

THEORETICAL BUDGET

3. The study mentioned in para 2 a was prepared during the first week of July 44 and was based on an arbitrary figure of 7065 calories for the whole family. This figure is much below that necessary to maintain health but was taken as a reasonable average of what such a family might in fact at this present time consume. The total was based on approximately 1100 calories for the men and 1600 each for the wife and two children.

4. The number of calories indicated above are getting very near the "starvation" level for physiologists in general lay down that a daily average in the region of 2400 calories daily are required as a preservation ration for a man in a state of rest while a light worker will require additional calories estimated by different authors to range between 140 and 900.

5. The cost of the daily food for the hypothetical family described above was prepared in three ways.

- a) If all the food had been bought at legal prices
- b) If all the food had been bought in the black market
- c) if food was bought at legal prices up to the possible limit of rations etc and the surplus in the black market.

6462

The resulting figures were as follows:-

|                        |                        |                        |
|------------------------|------------------------|------------------------|
| a.                     | b.                     | c.                     |
| 127.21                 | 407.20                 | 205.58                 |

ACTUAL BUDGETS

6. An enquiry was made into the weekly expenses of twelve working class families in Rome for the week ending 2 July 14 of which the following table is a summary.

| Family        | No in family | Daily Income | Average for family |              |
|---------------|--------------|--------------|--------------------|--------------|
|               |              |              | Total expense      | Cost of food |
| 1             | 3            | 199          | 177                | 79           |
| 1             | 3            | 110          | 98                 | 74           |
| 2             | 4            | 95           | 367                | 205          |
| 3             | 4            | 42           | 426                | 295          |
| 4             | 6            | —            | 411                | 312          |
| 5             | 7            | 115          | 168                | 105          |
| 6             | 6            | 150          | 400                | 322          |
| 7             | 5            | 56           | 442                | 448          |
| 8             | 9            | —            | 264                | 186          |
| 9             | 3            | 46           | 235                | 217          |
| 10            | 7            | 84           | 398                | 519          |
| 11            | 5            | 82           | 142                | 94           |
| 12            | 7            | —            | 264                | 12           |
| Total Average |              | 72           |                    |              |

7. These are remarkable discrepancies between the figures given by different families and it is difficult to understand that family No's 1, 2 and 12 could contrive to spend no much less than the other nine families.

The answer, is that these three families have thought it advisable to declare what they buy on the black market.

8. It will be obvious from these figures when compared with the minimum daily cost of food para 5 col C, that if those twelve families and those expenses are typical then the working class of Rome are dangerously below a reasonable level of nutrition.

9. It is unfortunate that time and resources did not permit a longer and larger inquiry ref 5803 which would obviously bear more weight but there is no reasons to suppose that th-

averages shown above are not approximately correct.

RESULTS

10. An enquiry is being conducted in Naples into actual working family budgets but sofar no result have been received. Information is available however showing an interesting comparison in cost of living for the period since the beginning of this year.

COMPARISON COST OF LIVING

11. The following table is divided into two considerations

- a) actual expenses and index numbers
- b) Expenses and Index numbers that would exist if the quantity of calories available in Jan 44 had remained the same to date.

Index no of l.m for Jan 44 is used for comparison  
The expenses are entirely cost of food.

|                | a        |       | b        |       |
|----------------|----------|-------|----------|-------|
|                | Expenses | Index | Expenses | Index |
| Jan            | 5158     | 100   | 3498     | 100   |
| Feb            | -----    | ----- | -----    | ----- |
| Mar            | 2379     | 105   | 2908     | 115   |
| Apr            | 3371     | 97    | 3982     | 115   |
| May            | 3483     | 100   | 4123     | 119   |
| Jun            | 2453     | 99    | 4120     | 119   |
| Jul (1st week) | 2275     | 65    | 2674     | 100   |

12. The figures of L. 2275 a week for a hypothetical family is based upon a diet that provides 2614 calories daily for each person. This is higher than the estimated pre war figure of 2500 (see "Italian Basic Handbook") and considerably higher than the diet ration of 2100.

Therefore it is quite certain that in fact the average working class family in Naples is existing on a smaller weekly diet expense than the figures in para 11.

COMPARISON FOOD EXPENSES

13. The weekly food cost for a typical <sup>2275</sup> 5802 in Naples is, as shown above for the first week in July:-

At the same period, an equal quantity of food purchased in Rome would have cost:-

|                  |     |
|------------------|-----|
| Index for Naples | 100 |
| Index for Rome   | 111 |

DISCUSSION

14. The information contained above suggests that there is sufficient difference in cost of food and therefore cost of living, for the average proportion spent on food in the budgets of para 6 is 30%, in various provinces to suggest the possibility of a "sliding scale" for Armed Force wages which scale will be the subject of an early investigation.

AND TRADE REVIEW.

卷之三

sistence" below which one cannot go (see table n° 1)

In September 1942, it is found that the portioned share of products, measured to the roman population the minimum of subsistence above mentioned, since it furnished a daily energy ration of 2,200 calories for a consuming unit.

- 1) Examining the quantity of foodstuff distributed in Rome in September 1942, it is found that the portioned share of products, measured to the roman population the minimum of subsistence above mentioned, since it furnished a daily energy ration of 2,200 calories for a consuming unit.
- 2) The quantity of foodstuff distributed in Rome in September 1944 has furnished instead only 60% of the requirements for this minimum of subsistence, in as much as it corresponds to a daily energy ration of 1319 calories for a consuming unit.
- 3) Supposing that in Rome in September 1944 were distributed the quantity of foodstuff sufficient to fill the requirements shown by the standard-budget, and that it could be bought entirely at official prices, it would result in comparison to September 1942 that the total cost of the expense for foodstuff, valued in both cases to the respective official prices-has risen 5 times its value (500%) (see table No. 2).
- 4) Since in reality the quantity of foodstuff distributed in September 1944 is far below that of the standard-budget, it results that a considerable quantity of foodstuff must be bought at Black market prices. The relative expense for the purchase of this foodstuff results to be almost double (.. 110%) of that relative to the purchase of foodstuff distributed at official prices (L. 698,90)
- 5) Summing up these two figures it results an average effective expenses for food supplies equal to L. 1302,93 (see table No. 3).
- 6) Since in September 1942 the same quantity of foodstuff incurred an expense of .. 192,65, it implies that the cost for food supplies for the standard family has, on the whole, risen to 9 times in comparison to September 1942 (93%) (see table No. 3)

1 - Essendo questa la prima settimana di rilevazione, spesso gli incassi risultano inferiori alle spese. On NOTE:  
che le famiglie vivono col ricavato da vendite effettuate in periodi precedenti.

As this is the first week that these data are given in certain cases the amount of the income appears to  
is due to the fact that some families live on the proceeds of sales effected in previous periods of time.

2 - I dati di cui alle colonne 10, 11, 12, ultima riga (totale libretti) sono stati ottenuti dividendo rispe  
colonne 7, 8, 9 (ultima riga) per 5, che e' il numero medio dei componenti la famiglia (62 : 12)

The data given in the columns N.10, 11, 12 last line (Total books) have been obtained by dividing the fi  
(last line) respectively by 5, which is the average number of the family members (62 : 12).
