AGR/701.3

20 June 1945

SUBJECT: Application for authority to move copper sulphate
ROME to MONFALCONE

TO : Transportation Sub-Commission

1. Reference your AC/18/2/Tn 3 of 15 June 1945 on the
above mentioned subject.

2. Copper sulphate is a controlled commodity in AMG
territory, and all copper sulphate in AMG territory is being
worked out under an allocation program which takes into con-
sideration all imported materials as well as any domestic su-
pplies of copper sulphate found in Northern Italy.

3. The application for authority to move the material
in the above mentioned letter, does not fall in this category,
and must be considered black market material which should have
been distributed in Liberated Italy. Therefore, we cannot
give our approval to this application. Copper sulphate is in
very short supply in the Rome area, and the only incentive for
moving it out of Rome would be one of price. It is very ques-
tionable that this copper sulphate could be moved from Rome to
Monfalcone by truck and be sold at the price established in
the North.

J. M. Merritt
JAMES M. MERRITT
Director

*Spoke to Mr. Kerbol
of Agric Sub Com. 21 June.
He is writing to applicant
saying movement is not
permitted. JMM
1430/21 June.*

SUBJECT : Application for Authority to
move Copper Sulphate
ROME to MONTALCONE

TO : Agriculture Sub-Commission

1. Enclosed find original of application from FABIANO PERAZZA, Via Filippo Civinini, 15, ROME dated 13 June 45 for authority to move 4 tons Copper Sulphate from ROME to MONTALCONE.
2. Please will you give the matter your attention. If you approve of the movement application must be made through channels to 15 Army Group.
3. Doubtless you have already planned movement of this commodity by more reasonable route than from ROME by road, in which event please notify the applicant accordingly.

For the Director:

G.N. CHRISTENSEN
Lt. Colonel

Report No. 2 - 19 February 1945

1697

SCHEDULE OF ITALIAN COPPER SULFATE PRODUCTION FROM DOMESTIC SUPPLIES OF COPPER.

A - ITALIAN GOVERNMENT TERRITORY

		Copper sulfate procurement program (metric tons) based on domestic supplies of scrap metal.							
		From actual stocks in the plant		From supplies actually available, offered, or purchased		Potential		By April 1945	
						Probable	Perhaps realizable		
<u>Montecatini Bagnoli (Naples)</u>	120	From worked materials	1,380	From civilian salvaged scrap (RADIROT) in Lazio Region.	160	Blister copper in Sardinia	1,900	(b)	
	560	From Allied Forces scrap.	566	From Italian Ministry of War in Naples area.	1,000	70/75% copper matte at AMMI-Cagliari (a)	1,400	(c)	
							700	Copper ores at Cogne Co. Fontana-Sardinia (d)	
			87	From Ital. Ministry of War in Sardinia			100	50% copper matte at AMMI Cagliari	
Total	680		2,633		1,160		3,200		520
<u>Brindisi (Starting 15 March 1945)</u>			453	From Allied Forces Bari Area					
			244	From Ital. Ministry of War - Taranto area					
Total			697						100
<u>Other Producers</u>	Insignificant. No other normal commercial scale plants are known in Italian Government territory. Small emergency scale is being considered at Monteponi Coy near Iglesias and at Monreale - S. Gavino.								
Grand Total	680		2,730		1,160		3,200		620

SCHEDULE OF ITALIAN COPPER SULFATE PRODUCTION FROM DOMESTIC SUPPLIES OF COPPER.

ary 1945

TERRITORY

Copper sulfate procurement program (metric tons) based on domestic supplies of scrap metal.				Estimated Production					
				Potential		By April 1st 1945	April 1st to Dec. 31, 1945	January - June 1946	
From supplies actually available, offered, or purchased		Probable	Perhaps realizable						
380	From civilian salvaged scrap (RADIROT) in Lazio Region.	160	Blister copper in 1,000 Sardinia 700 70/75% copper matte at ANMI-Gagliari (a)	1,400 700 100	(b) (c) Copper ores at Cogne Co. Fontana-Sardinia (d) 50% copper matte at ANMI Cagliari.				
566	From Italian Ministry of War in Naples area.	1,000							
87	From Ital. Ministry of War in Sardinia								
433		1,160		3,200		520	6,553		
453	From Allied Forces Bari Area								
244	From Ital. Ministry of War - Taranto area								
697						100	597		
Other normal commercial scale plants are known in Italian Government territory. Sardinian production on a small being considered at Monteponi Coy near Iglesias and at Monreale - S. Gavino.									
730		1,160		3,200		620	7,150 (e)	(f)	

- NOTES :
- a) - Owing to smelting difficulties that might arise, only 50% of this is counted
 - b) - From concentrates at San Gavino (9-34%) - Easily workable.
 - c) - From ores and concentrates which can only be worked up by joint plant operations.
 - d) - Subject to smelting facilities.
 - e) - This figure depends entirely on how much metal can be found - Potential production during this period for the two plants shown would be 10,000 tons of copper sulfate.
 - f) - Production capacity for Bagnoli is 1,350 tons/month
" " " Brindisi " 650 " "

B - AMG TERRITORY

1. Mario Puccioni - Castellina in Chianti - Plant virtually intact - Has an ample supply of pyrite production, but no copper.
2. Parri & Montepagani - Empoli - Producer of copper sulfate and copper oxychloride - Plant needs might be ready by March/April 1945.
3. Etruria S.A. - Compiobbi (Florence) - Has sufficient pyrites for one year's production of sulfur copper. Expect to get plant ready to work on a 50% capacity basis within a month.
4. Ausonia S.A. - San Donnino (12 Km. West of Florence) - Plant largely intact - Buildings badly damaged - months repairs.
5. Carlo Marchi - Pescia - Copper sulfate plant 50% destroyed - Requires several months, minimum, repairs.
6. Montecatini Coy - Rifredi (Florence) - Copper sulfate plant completely destroyed.

NOTE - RR service has not yet been reestablished for this region, and this is a prime requisite for any considerable tonnage of pyrites would have to be brought in before the sulfuric acid plants could operate. All of the above plants are designed for commercial operation, and as matters stand, could not operate. If plants were to operate, many times the amount of scrap metal that appears will prove available.

189

Accioni - Castellina in Chianti - Plant virtually intact - Has an ample supply of pyrites for sulfuric acid production, but no copper.

Montepagani - Empoli - Producer of copper sulfate and copper oxychloride - Plant needs minor repairs and might be ready by March/April 1945.

S.A. - Compiobbi (Florence) - Has sufficient pyrites for one year's production of sulfuric acid, but no copper. Expect to get plant ready to work on a 50% capacity basis within a month.

S.A. - San Donnino (12 Km. West of Florence) - Plant largely intact - Buildings badly damaged - Needs 3 months repairs.

Archi - Pescia - Copper sulfate plant 50% destroyed - Requires several months, minimum, before could be repaired.

Archi Coy - Riffredi (Florence) - Copper sulfate plant completely destroyed.

R service has not yet been reestablished for this region, and this is a prime requisite, since a considerable tonnage of pyrites would have to be brought in before the sulfuric acid plants could be started up. All of the above plants are designed for commercial operation, and as matters stand, could consume, if all plants were to operate, many times the amount of scrap metal that appears will prove available.
