Figure 1: The ΔV_{eff} as a function of ΔV_{eff} for $\Delta V_{\text{eff}} = 0.5, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10$.

1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.
