60/1

SUBJECT: Private Line from MOBNANO. Works to Italian State
Railway at MORGNANO S.ANGELO.

The above line was inspected and found to be completely restored from the works to the connection with the I.S. Railway at Morgnano S. Angelo with the exception of the crossing over one steel bridge which is completely severed in two places.

The bridge is of a swallow continuous plate girder construction over 3 spans. Repair work is in hand and all necessary materials are in the possession of the companies.

It is estimated that the work will be completed by 7th September.

The P and C work on the I.S.R. is in a bad shape and sidings are littered with damaged stock.

British Tn. have been approached and will clear and repair P and C work.
