ITALIAN RAILWAY SINDACATE
SALERNO SECTION

Salerno 17 January 1946
File 16/PI

SUBJECT: Discharge of steamers at Salerno

TO: W.T.KELLY
Lt. Col. TC
Deputy Director MRS-I

The workers of the Porto of Salerno left for sometime without a continuous work are asking in analogy of what was done before the war that coal for railways and industries of Salerno and hereby areas be discharged at Salerno Port where excavation works and repairs still going on already consent the approach of steamers with a cargo of 5.000 tons.

At the present the discharge of this coal is carried out at Sagnoli and other ports in the Gulf of Naples, thus requiring more railway cars which are badly needed for transport of other goods.

We allow ourselves to bring this request to the attention of your benevolent sense of justice for the decisions that you will consider advisable to take in order to attain that sound economy that must concur in the re-habilitation of this poor Italy as desired also by United Nations.

THE COMPARTIMENTAL COUNSELLOR
/s/.....

SINDACATO FERROVIARI ITALIANI
SEZIONE DI SALERNO

SALERNO 17 gennaio 1946

N. 16/PI

OGGETTO: Scarico vapori a Salerno

Risposta al N. det.

L.I.L° W.T. Kelly Tit.Sol.T.C.
Ass., deputato Director Equipment

R O M A

Le masse lavoratrici del porto di Salerno, privo da molto tempo di lavoro continuativo, chiedono che, analogamente a quanto veniva fatto prima della guerra, il carbone occorrente all'esercizio delle Ferrovie ed alle industrie di Salerno e del suo retroterra, venga scaricato a Salerno ove i lavori in corso di scavo dei fondali e di riassetto delle banchine, consentono già l'approdo di navi con carico di 5000 + più tonnellate.

Attualmente lo scarico di tale carbone avviene a Bagnoli o ad altri porti del Golfo di Napoli, con evidente aggravio di spese di trasporto e con maggiore impiego di vagoni ferroviari, di cui il commercio lamenta penuria.

Ci permettiamo di sottoporre la richiesta al benevolo senso di giustizia della S.V.Illma per la decisione che riterrà di prendere, per il conseguimento di quelle sane economie che dovranno concorrere alla rinascita, auspicata anche dalle Nazioni Unite, di questa povera Italia.

Con riconoscente devozione.

SUBJECT: Report on Salerno
TO : MR. R. M. Bazzanella, Chief
Ports & Warehouse Division

1. I arrived at Salerno on the morning of 6 September 1945 and contacted Signore Autuori and the Captain of the Port. Then I went down to inspect the dredging which had been done. The channel has been dredged to a depth of 24' and will eventually be dredged to 28'. The east quay at present is about 19' deep and will eventually be dredged to 24'. The depth of the west quay is 28'.

2. While there, I saw the dredger idle and was told that the suction mechanism had broken down and work was suspended until repairs could be carried out. I was informed that the dredger had not been in operation since 29 August 1945 and that the necessary repairs would not be completed before 16 September 1945.

3. According to a diver's report, there are large pieces of stone, which were blowing into the sea during the bombing, on the bed (see drawing of Port of Salerno). Some of these stones are too large for the dredger to cope with. Under the circumstances, it might be better to dispatch a bucket type dredger to Salerno to complete the job. The estimated time to reach the required depth with the suction dredger is 150 to 160 days; that is without any machinery breakdowns. With a bucket type dredger, the work could be done in 50 to 60 days. Lt. Col. Renaldi, the Port Commandant, also suggested that the work of the dredger be given out on a contract basis, as at present the crew get paid so much per day whether they work or not. The average dredging rate is 400 cubic meters per day, whereas the output should be 700 cubic meters per day.

4. I mentioned to Col. Sarte at Naples about the repairs to the dredger and he said that he would see that repairs were done as quickly as possible.

SUBJECT: Dredging at Salerno

TO : Direzione Generale Marina Mercantile
Ispettorato Funzionamento Porti
Rome
(Att: Col. M. Lauricella)

1. Your attention is drawn to the unsatisfactory progress of dredging at Salerno.
2. From our own investigation, we find that damage to suction mechanism of dredger has occurred and that no dredging has been done since 29 August to date.
3. We pointed out to you at time of assignment of dredger "Roma" to operations at Salerno that your Captain of the Port there should furnish frequent reports to you of progress of dredging operations and that you should advise us of same but such advices have not been forthcoming.
4. It is understood that the damaged mechanism has been sent to Naples for repair and you are particularly requested to expedite this repair and impress upon all concerned the necessity for speeding up dredging operations.
5. Please instruct your Captain of the Port at Salerno to furnish immediately a rough plan of the port, showing the areas so far dredged and the depths attained and let us have a copy of same.
6. Dredging, when in progress, was at the rate, we are informed, of only some 400 cubic meters per day. This is, in our view, a ridiculously low rate and as we understand that the Dredging Master and crew receive their full pay whether working or not, this must obviously militate against reasonable and proper prosecution of the work.
7. Please let us have your immediate observations and advice of action taken.

R. CAPITANERIA DI PORTO DI SALERNO

DATI E NOTIZIE CIRCA IL PORTO DI SALENRO

1°) - BANCHINE PER ACCOSTO DI PIROSCAFI E MOTONAVI

a) - BANCHINA DI LEVANTE(Molo Manfredi)

Lunghezza - La banchina ha una lunghezza utile di m. 170.-

Fondali - I fondali attuali si aggirano intorno a m. 7 al centro, mentre alla testata e alla radice scendono a circa m. 5.-
A dragaggio eseguito, i fondali lungo tutta la banchina saranno portati a m. 7,50.-

Binari ferroviari - Lungo la banchina corre un doppio binario ferroviario; il primo binario dista m. 3,84 dal ciglio delle banchine, mentre il secondo dista m. 11,80.-

Magazzini - Alla testata della banchina esiste un grande magazzino per deposito di merci, gravemente danneggiato in seguito agli eventi bellici ed attualmente in corso di ricostruzione.-

Tale magazzino, il quale dista m. 20 dal ciglio della banchina, a lavori ultimati avrà la capacità di mc. 18.000.- Attualmente nel magazzino possono essere depositate circa 2000 tonn. di cereali.-

Spazi per deposito di merci - Sulle banchine possono essere depositate, allo scoperto, circa tonn. 10.000 di merci.-

Lavori in corso - Sono in corso i lavori per il ripristino dei binari ferroviari e per la ripavimentazione della banchina.- Si prevede che i lavori potranno essere ultimati fra due mesi.-

b) - BANCHINA DI PONENTE

Lunghezza - La banchina ha una lunghezza utile di m. 170.-

Fondali - I fondali attuali sono di m. 9 alla testata e di m. 8 alla radice.-
A dragaggio eseguito, i fondali saranno portati a m. 8,50 lungo tutta la banchina.-

Binari ferroviari - Lungo la banchina corre un doppio binario ferroviario; il primo binario dista m. 4,40 dal ciglio della banchina, mentre il secondo dista m. 8,33.-

Magazzini - Attualmente non esistono magazzini per deposito di merci sulla banchina di ponente.- E' in progetto la costruzione di un grande magazzino portuale, il quale avrà la capacità di circa mc. 16.000.-

Lunghezza - La banchina ha una lunghezza utile di m. 170.-

Fondali - I fondali attuali si aggirano intorno a m. 7 al centro, mentre alla testata e alla radice scendono a circa m. 5.-

A dragaggio eseguito, i fondali lungo tutta la banchina saranno portati a m. 7,50.-

Binari ferroviari - Lungo la banchina corre un doppio binario ferroviario; il primo binario dista m. 3,84 dal ciglio della banchina, mentre il secondo dista m. 11,80.-

Magazzini - Alla testata della banchina esiste un grande magazzino per deposito di merci, gravemente danneggiato in seguito agli eventi bellici ed attualmente in corso di ricostruzione.-

Tale magazzino, il quale dista m. 20 dal ciglio della banchina, a lavori ultimati avrà la capacità di mc. 18.000.- Attualmente nel pagazzino possono essere depositate circa 2000 tonn. di cereali.-

Spazi per deposito di merci - Sulle banchine possono essere depositate, allo scoperto, circa tonn. 10.000 di merci.-

Lavori in corso - Sono in corso i lavori per il ripristino dei binari ferrovieri e per la ripavimentazione della banchina.- Si prevede che i lavori potranno essere ultimati fra due mesi.-

b) - BANCHINA DI PONENTE

Lunghezza - La banchina ha una lunghezza utile di m. 170.-

Fondali - I fondali attuali sono di m. 9 alla testata e di m. 8 alla radice.- A dragaggio eseguito, i fondali saranno portati a m. 8,50 lungo tutta la banchina.-

Binari ferroviari - Lungo la banchina corre un doppio binario ferroviario; il primo binario dista m. 4,40 dal ciglio della banchina, mentre il secondo dista m. 8,33.-

Magazzini - Attualmente non esistono magazzini per deposito di merci sulla banchina di ponente.- E' in progetto la costruzione di un grande magazzino portuale, il quale avrà la capacità di circa mc. 16.000.-

Spazi per deposito di merci - Sulle banchine possono essere depositate, allo scoperto, circa 15.000 tonn. di merci.-

. / ..

Lavori in corso - La banchina di ponente non ha sofferto danni.-

2°) - FONDALI DEL CANALE DI ACCESSO E DEL BACINO INTERNO

I fondali del canale di accesso al porto sono ora ridotti, nel punto più basso, a m. 7,30 circa, e consentono pertanto l'ingresso di navi con peraggio non superiore a piedi 23½.-

Nell'interno del bacino i fondali si aggirano intorno a m. 8.- A Salerno si trova attualmente una draga per l'escavazione del fondo del canale di accesso e del bacino interno.-

I lavori avranno inizio fra pochi giorni, non appena saranno ultimata le operazioni preparatorie.-

E' prevista l'escavazione di circa 200.000 mc. di materiale.-

I fondali del canale di accesso e del bacino interno saranno portati a m. 8,50.-

3°) - ILLUMINAZIONE NOTTURNA

L'impianto elettrico è andato completamente distrutto.- E' già stata fatta richiesta all'Ispettorato Funzionamento Porti dei materiali occorrenti per il ripristino.-

Anche il faro e i fanali del porto sono andati distrutti o gravemente danneggiati.- Sono in corso i lavori di ricostruzione e di riparazione.-

4°) - MEZZI MECCANICI PER L'IMBARCO E SBARCO DELLE MERCI

Non esistono mezzi meccanici per il compimento delle operazioni commerciali.-

Il lavoro, pertanto, viene compiuto esclusivamente a braccia.- La ressa per lo sbarco di grano ed altri cereali pesanti è di circa tonnellate 200 al giorno per ogni boccaporto, per otto ore di lavoro.-

Salerno, li 8 agosto 1945

IL TENENTE COLONNELLO DI PORTO COMANDANTE
(Giusto Rinaldi)

TRANSLATION of letter, dated 3 Aug. 1945, addressed by the Capitainerie
di Porto, SALENTO, to Capt. Allman, Rome, (Porto & W.tee Div.).

Dear Mr. Allman,

I sent herewith a short report which you asked me for regarding present conditions in the port of Salerno, and about work being carried out.

It is understood, of course, that you can ask me for any other news, and I will send it to you forthwith.
Yours etc.

Transcription of enclosure to above letter:

DATA AND NETS REGARDING THE PORT OF SALERNO

1) WHARFS WHERE STEAMERS & MOTORSHIPS VOOR ALONGSIDE.

a) EAST WHARF (Vanfreidi Wharf):

Length: The wharf has a usable length of 170 metres

Depth of water: The depth of water is about 7 metres at the middle, while at both ends it lowers down to about 5 metres. When dredging is carried out, the depth of water along-
side the whole wharf will be brought to 7.5 metres. ~~24.5%~~

Railway sidings: Along the wharf there is a double railway track; the first line 1° metres 3.84 from the edge of the wharf, and the second line 1° metres 11.80 from the edge.

Warehouses: At the end of the wharf there is a large warehouse for goods, seriously damaged through war action, and now is being rebuilt. This warehouse, which is 20 metres from the edge of the wharf will have, when finished, a capacity of 18,000 cubic metres. At the present moment there can be stored in this warehouse about 2000 tons of cereals.

Space for back-stilling of goods: On the wharf there can be stored in the open about 10,000 tons of goods.

Work in hand: There are in hand works for the ~~rail~~ of the railway lines and for repaving the wharf. ~~1/3~~ is expected that these works will be finished in two months.

b) WEST WHARF:

Length: The wharf has a usable length of 170 metres.

DATA AND NEWS REGARDING THE PORT OF SALTUNG

1) TRADES WITH STEAMERS & MOTORSHIPS NOCP ALONGSIDE.

a) EAST WHarf (Konradt Wharf):

Length: The wharf has a usable length of 170 metres

Depth of water: The depth of water is about 7 metres at the middle, while at both ends it lowers down to about 5 metres. When dredging is carried out, the depth of water along-side the whole wharf will be brought to 7.5 metres. = 24'-3"

Railway sidings: Along the wharf there is a double railway track; the first line is 7.64 from the edge of the wharf, and the second line is 11.80 from the edge.

Warehouses: At the end of the wharf there is a large warehouse for goods, seriously damaged through war action, and now is being rebuilt. This warehouse, which is 20 metres from the edge of the wharf will have, when finished, a capacity of 18,000 cubic metres. At the present moment there can be stored in this warehouse about 2000 tons of coal.

Space for back-rolling of goods: On the wharf there can be stored in the open about 10,000 tons of goods.

Work in hand: There are in hand works for the ~~removal~~ of the railway lines and for repairing the wharf. This is expected that these works will be finished in two months.

b) WEST WHarf:

Length: The wharf has a usable length of 170 metres.

Depth of water: The present depth of water is about 7 metres at the end and of 8 metres at the beginning of this wharf. After dredging, the depth of water will be metre 8.5 along the whole side of the wharf. = 27'-6"

Railway sidings: Along the wharf there is a double line, the first is metre 4.4 from the edge of the wharf, the second is metre 8.33.

Warehouses: At present there are no goods warehouses on the west wharf. There is planned the building of a large point warehouse, which would have a capacity of 16,000 metres.

Space for back-rolling of goods: On the wharf there can be stored, in the open, about 15,000 tons of goods.

Work 1.1.1.1: The west wharf has not suffered any damage.

2) DEPTH OF WATER IN CHANNEL OF ACCESS TO PORT AND OF INNER BASIN.

The depth of water in the channel of access to the port is now reduced, in the lowest points, to about 7.3 metres, and therefore allows the entrance of ships drawing not more than 23.1/2 feet.

In this basin the depth of water is about 8 metres.

At Salerno there is at present a dredger for dredging the channel and the inner basin.

Work will start in a few days, as soon as preparatory work is completed.

There is foreseen the dredging of about 200,000 cubic metres of material.

The depth of water in the channel and in the inner basin will be increased to 8.5 metres. = 27' 6".

3) NIGHT ILLUMINATION.

The electric plant was completely destroyed. Request has been put in to the Istituto Funzionamento Porti for the material needed to renew the lighting.

The lighthouse and navigation lights of the port were destroyed of seriously damaged. Reconstruction and repair work is in hand.

4) MECHANICAL MEANS FOR LOADING AND DISCHARGING GOODS:

There are no mechanical means for the carrying out of loading or discharging. Work, therefore, is done exclusively by hand.

The output per day per batch per 8-hour shift is of about 200 tons for wheat and other heavy cereals.

Salerno, 3 August 1945.

THE LT. COLONEL COMMANDING THE PORT

(sd) Claudio Minoli.

SUBJECT: Dredging at Port of Salerno - Visit by Mr. A.C. Allman
TO : Mr. R. M. Bazzanella, Chief
Ports & Warehouse Division

1. As directed, I visited the port of Salerno, arriving there in the morning of 3 August. Signor Autuori of the Firm of Michele Autuori & Figlio, General Shipping Agents, proffered his services and introduced me to Lt. Commander J. Rinaldi, Capitano di Porto, who accompanied me to the harbor.

2. I found that the suction dredger "Roma" had arrived on 23 July but had not been able to commence dredging operations owing to the non-arrival of the self-propelled hopper barge "P.B.24" which was still under repairs at Navy Yard, Naples.

3. Upon enquiry of the Master of the Dredger as to why pipe-lines for discharge of dredged material to shore or elsewhere had not been shipped with the dredger (I understood this had been provided for in the sailing orders to enable her to commence dredging while awaiting arrival of the hopper barge), I was informed that this could not be done due to lack of space on deck and also because the weight would have endangered the stability of the dredger.

4. The Master reported the dredger in good order and ready to commence operations immediately upon arrival of the hopper and/or pipe-lines.

5. The following particulars of the "Roma" and the "P.B.24" were supplied by the dredge-master:

a. Dredger "Roma": Length 23 meters. Beam 8 meters. Draft 1.75 meters. Maximum dredging depth 13 meters. Capacity (in sand) 12,000 cubic meters in 24 hours.

b. Hopper-barge "P.B.24": Capacity 400 cubic meters. Self-propelled.

c. Both dredger and hopper are steam driven.

733

- 2 -

6. I was also informed that crew, fuel and stores for working the dredging plant are supplied by the owners - Empreza Cidonia.

7. Upon my return journey to Rome, I called at the office of the Fleet Civil Engineer, Captain Robinson, R.N.V.R., at AFHQ, Caserta, where I saw his assistant, Commander Croxford, R.N.V.R. and reported the delay to him. While with him, he received a telephone message from Naples to the effect that the hopper-barge "P.B.24" had sailed for Salerno.

8. Since my return to Rome, I have arranged, through the mediation of Lt. Morena, Italian Liaison Officer with this Division, for a diver to be sent immediately by Empreza Cidonia to Salerno with a view to ensuring that any possible sunken obstructions may be located and avoided by the dredger.

19 July 1945

SUBJECT: Report on Visit by Mr. A. C. Allman to the Port of Salerno on the 13 July 1945

TO : Mr. R. M. Bazzanella, Chief
Ports & Warehouse Division

1. Owing to a heavy itinerary, I did not reach Salerno until 5:45 P.M. but was fortunate in quickly contacting Signor Autoori of the Firm of Michele Autoori & Figlio, General Shipping, Forwarding & Insurance Agents, whom I was recommended to see by Mr. Fleury, MWT representative at Castellammare.

2. Signor Autoori has received very fine testimonials from British Naval and American Military Authorities for services rendered to the Allies following the landing at Salerno and I received a very favorable impression of his character and ability.

3. Signor Autoori informed me as follows:

a. The Harbor is well protected with the exception that southeasterly gales cause a ground swell which affects vessels at the berths.

b. The Entrance Channel is at present obstructed by siltation over two small areas, which is restricting the draft of vessels to 22 feet. Normal dredged depth is 27 feet.

c. There are two berths for Liberty size ships, one at the West Quay, length 250 metres with present depth of 27 feet shoaling shorewards to 26 feet. This berth is rail served and has back-piling space for some 5000 tons. The other berth - East Quay - length 130 metres with present depth of only 18 feet, ~~is also rail served. Adt.~~

d. Dredging of the bar in Entrance Channel, some dredging inside the basin and dredging of the berth at East Quay to a depth of 26 feet has been requested and the dredger "Roma" from Naples was due to arrive Salerno in two days time, as Sig. Autoori was informed.

- 2 -

e. When dredging is effected, it will be practicable to discharge two Liberties simultaneously at the two alongside berths where discharging by ship's gear can be directly on to rail cars.

f. Working 3 shifts, 5 gangs have discharged 1200-1300 tons grain in bags and bulk (bagging grain in hold) 800 tons per day. Adequate labor is available.

g. A good warehouse (cap. 2000 tons) is available at East Quay.

4. Recommendations:

a. That every effort be made to expedite the dredging program with view to providing a handy alternative port, particularly for Liberty ships discharging grain.

b. That the port be equipped with some fifteen Mincas and requisite towing facilities for lightering vessels of over 26 feet draft.

c. That greater use of this port be then made consonant with road and rail facilities and over-all movement requirements.

A.C. Allman

A. C. ALLMAN
Ports Branch

129

APRIL 20th 1945

SALERNO Gollo di Napoli

Salerno is a well sheltered small port, with a long stone breakwater.

The basin consists of discharging berths, most of which are presently out of use owing to war damage, on the East and West sides, whilst at the North side are boat building Yards and at the South the breakwater.

BERTHS The berths & the East side of the basin have been damaged, and the stonework of the quays would need replacing before use.

In normal times these repairs would not take long to complete. On the West side of the basin is a good rail served berth, capable of taking a vessel up to about 8000 but with a draft not exceeding about 19 ft. Although there is a draft of 24ft alongside this quay, the depth at the bar is only 20ft. This could be dredged to a depth of 26ft if a dredger were available.

SCHOONER BERTHS There is accommodation for several schooners.

Q71

In normal times there are no berths available.
On the West side of the basin as a good rail served berth,
capable of taking a vessel up to about 6000 but with a draft
not exceeding about 19 ft. Although there is a draft of 24ft
alongside this quay, the depth at the bar is only 20ft.
This could be dredged to a depth of 26ft if a dredger were
available.

SCHOONER BERTHS There is accommodation for several schooners.

178

APRIL 20th 1945

MINIMUM REQUIREMENTS at the ports of
SALINAS, CASTILLANATE and TORRE AREUZIAH.

SALINAS There is a depth of 24ft alongside berths, but at the entrance a depth of only 18ft. (Twenty feet)

The entrance should be dredged to a depth of 26ft.
It is suggested this is priority ONE.

CASTILLANATE There is one berth for coasters with a draft of 17ft outside of 15ft breasting barge. This berth could be improved but is not urgent.
At the Salio are two berths with a depth of 26ft 6ins.
These could be dredged.

TORRE AREUZIAH.

The depth at the entrance is 24ft. This could be dredged to its original depth of 27ft.
The estimated time required for carrying out this work is 10 days.

Berths 3 and 4 could be dredged to a depth of 25ft. At present the depth is 19ft outside of 15ft breasting barges.
Berth nos 3 and 4 berths was originally a stone pier. This has been removed except for the base, below water. It prevents a ship of more than about 3000 tons lying alongside except out side a double breasting barges. The stone base would have to be blasted.

The 1st 2 berths No 1 and 2 could be improved by dredging.
At present there is a depth of 22ft 6 ins outside 15ft barges.

DREDGING SALERNO -- USE OF "ROMA".

With reference to your G-4 (MOV & TN) 5/117/GIM dated 25th February 1945, the dredger in question can not at present dredge to the depth required at Salerno. An extension to the suction pipe is being prepared however, and it should be possible to undertake the work at Salerno after the completion of work for which the dredger is at present allocated at Fiumicino.

2. It will be necessary for the Allied Commission to arrange supervision of dredging at Salerno in due course.

To : C-in-C Med.

25 Feb 45

Tel: FREEDOM 302

1. Application has been made by HQ Allied Commission for a dredging operation at SALERNO, which if carried out will increase the port capacity.
2. There is a bar with 22' draft which could be dredged to 25'. A passage 8 metres wide could be cleared in 15 days, which would be sufficient to admit a Liberty. It is estimated that it would take six weeks to give an overall depth of 24'.
3. It is estimated that 2160 cu feet will require to be dredged to clear a passage over the Bar.
4. The West Quay has a draft of 24', and such a dredging operation would obviate lightening to 22' at CASTELFIORE.
5. It is suggested that the dredger "Rosa" be sent to SALERNO to carry out this work.

SUBJECT : Dredging Salerno

TO : G-4 (AGO & M) ~~12/23~~

20 Feb. 1945

In order to increase the port capacity of Salerno,
a dredging operation is necessary.

There is a bar with 2' draft which could be dredged
to 20'. A passage 8 metres wide could be cleared in 10 days,
which would be sufficient to admit a Liberty. It is estimated
that it would take six weeks to give an overall depth of 24'.

The West Quay has a draft of 24', and such a dredging
operation would obviate lightening to 20' at Castellammare.

It is therefore requested that the dredger "Roma",
now in Naples be sent to Salerno to carry out this work.

19 February.

INTER-OFFICE MEMORANDUM

SUBJECT : Trip 15-17 February 1945.

TO : Major McClure.

Salerno:

Governing factor bar 22' - could be dredged to 25'.

E Quay - 16' deepening to 18' at north end.

W Quay - 24'

Dredger could clear passage 8m width in 15 days.

" give overall depth of 24' in 6 weeks.

South end of E Quay is slightly damaged. Italian Public Works have been informed, but work not yet in hand. The matter is being pursued.
