SUBJECT : Private Railway Rome-Viterbo
Società Romana per le Ferrovie del Nord

IN REPLY QUOTE: R4/ENG/716.2

1. A representative of the above railway called on 18th September and reported that through trains were now running crossing the "TRESA" temporary Bridge ~~which he hopes will stand Winter floods~~.

2. He represented that with Energy available for longer hours he could transport more food from Viterbo Province.

It seems important and is being investigated from the Electric view point.

Lt.Col.R.E.

SUBJECT: Availability of Electricity at Aquila.

TO: Regional Engineer, A.C.C. Region V.

1. Reference is made to the recent conversation between yourself and Major Vinal S. Renton of this office relating to the requirements of Aquila for 200 kilowatts to be furnished from the Terni system.

2. At the time of your conversation, there was some question as to how electricity would be allocated in the future, since the area involved is no longer under the jurisdiction of A.A.I., but comes instead, under AF Hq. The Electric Power Committee, which formely allocated electricity, was an agency of A.A.I.

3. Yesterday, however, it was learned that there will be a new committee, similar to the old Electric Power Committee, but established under the sponsorship of AF Hq. The first meeting of that Committee will be held on 28 September. It is understood that this committee will be charged with allotting the available electricity in all of Italy, and that it will include representatives of each district.-

4. In view of this, it is suggested that the application for electricity at Aquila be made to No. 2 C.E. Works. (No. 1 District).

SUBJECT: Electricity for Flour Mills in Ancona Area.

TO : A.M.G. Eighth Army
Attention Wing Commander Benson.

1. Reference is made to your teletype message Number F/1539. received at Allied Control Commission Headquarters on 16 September relating to electricity requirements for the flour mills in the Ancona area. It will be recalled that Major V.S. Fenton of this Headquarters discussed this message with Wing Commander Benson on 17 September, and promised that the matter would be referred to A.A.I. Headquarters. This was done immediatly, and in turn to Major William Rivett No.1 District, who is understood to be allocating available power in the area, who is supervising the rehabilitation of some electric facilities, and who is furnishing available assistance to the civilian electric companies.

2. In connection with each plant, Major Rivett reported as follows:

FILOTTRANO		Some electricity possible soon. Supply here is dependant upon the starting of a small plant at Fiorano, in turn contingent upon the completion of a bridge over which a transformer must be carried.
SENIGALLIA	-	No electricity expected for at least two months.
CASTELFERRETTI	-	Similar to Filottrano.
ANCONA	-	All available power needed by military.
SASSOFERRATO	-	Two small nearby plants are expected to be started here soon, and some power may be available. Exact starting date not known.
FABRIANO	-	Similar to Filottrano.
CAMPOCAVALLO	-	Similar to Filottrano.
OSIMO	-	Similar to Filottrano.

ACC/060/PWU 5 Sept. 1944

SUBJECT: Electrification of Railways

TO : V.P. Economic Sec.

1. Attached hereto is a copy of a letter from the Transportation Sub-Commission regarding electrification of the Naples - Rome line, with copy to us.

2. This, in connection with discussion held at this H.Q. regarding A.C.C. Transportation Sub-Commission taking over the direction of Transportation operations within A.C.C. territory from the Transportation Corps with the Armies, both British and American, raises an important issue.

3. The Minister of Public Works is charged with new railroad construction. In fact he has a separate division on this. He is also charged with "war damage reconstruction". The Public Works and Utility Sub-Commission is charged on the one hand with the reconstruction of Military Highways and Bridges, and on the other hand with the overall planning and execution of electrical rehabilitation.

4. The Transportation Corps rebuilds and rehabilitates railroads required for military operations, the same as is done by Army Engineers in Army Zones. The Transportation Corps however has heretofore operated in A.C.C. territory as well and has carried on reconstruction work there, including certain electrical rehabilitation.

5. If the Transportation Sub-Commission is to take over operations in A.C.C. territory the question must now be raised, who is going to undertake reconstruction work? Is the Transportation Sub-Commission going to engage an engineering staff, both for railroad and electrical work, or is this task to be taken over by the Public Works and Utilities Sub-Commission, which is already doing some of this work, because our Regional Engineers handle transportation problems in the Region and our

1366

Declassified E.O. 12356 Section 3.3/NND No. 785019

engineers are used in connection with these tasks, including some railroad and railroad bridge construction. Furthermore, since the P.W.& U. Sub-Commission is charged with the overall electrical planning and rehabilitation, and since we already are furnishing electric current from our supply to operate certain railroads, it must be obvious that we can not have two branches within A.C.C. handling similar problems with a resultant overlapping of functions.

6. The recommendations are made that:

(a) The Transportation Sub-Commission handle all Transportation operating problems, including normal repair and maintenance of railroad tracks, a function always placed under the railroad operating branch, and not the railroad engineering branch, which handles all new construction or reconstruction.

(b) That all reconstruction required by the Transportation Sub-Commission such as bridges or buildings, new track construction and electrical rehabilitation work, be done by the P.W.& U. S-C. as the engineering department for A.C.C.

In line with this program, bridge engineers or electrical engineers, now in the Transportation Sub-Commission, should be transferred to the P.W.& U. Sub-Commission.-

L.A. JENNY

SUBJECT : Electrification Naples-Rome Line (89)

TO : Major E.J. Mole
Transportation Sub-Commission Engineer (South)

1. The Director General Military Railway Services does not intend the electrification of the Naples-Rome Direttissima line north of Villa Literno, but offers the help of the Chief Electrical Engineer, M.R.S. in continuing electrification to Rome, and we are invited to contact Colonel F.R. Hosack, Assistant General Manager Equipment at office of D.G.M.R.S., Rome.

2. On 14 June last by letter ACC Tn/211/9, advice was sent D.G.M.R.S. (Col. Mc Fadden) of certain equipment available in dumps, as notified by Public Works Sub-Commission, who had been concerned with the possibility of using the overhead lines for conveyance of electric power from Naples to Rome.

3. This information may be found of use when preparing plans.

Subject: Electricity for Orphan Asylum.

To : Public Health Sub-Commission.
(Public Welfare Branch)

Attached hereto is a translation of a letter received from an Orphan Asylum, located at 18 Via Emanuele Filiberto, Rome, asking that they be given more electricity.

As this is a Public Welfare matter it is referred to you for investigation and such action as you may deem proper to take.

If you feel that they should have more electricity will you please make your request directly to the Rome Area Command, Engineering Division 45 Via del Mare, stating your case with reasons why more electricity should be given, with carbon copy to us for our information.

L.A. JENNY,
Lt-Colonel, C.E.,
Director.

(Orphan Asylum)

Rome - 12/9/1944

TO : ALLIED COMMAND - ROME

The undersigned Directress requests you to consider the following:-

Our Asylum is poor and works in the cause of charity, we provide shelter for orphans and destitute young girls, (some of whom are supported by small sums to assist with their boarding expenses) and we have to provide subsistance in addition. Up to August 1943 we were self supporting but during the early part of September the Asylum was requisitioned by the Germans and we had to move out taking with us the inmates who had no one to carefor them.
At the end of June 1944 we returned to the Asylum but were distressed to find that the Germans had used up our supply of firewood and the Electric power was not available.
How can we provide for these poor orphans when we lack the necessary means?
We understand the present difficulties but we implore you to supply us with a little Electric power to enable us to provide for these poor orphans which is made difficult because of increased cost of foodstuffs.
For our part we promise to economise in the use of the Electricity and express our gratitude for anything you can do to help us.

We beg to remain, yours truly

Directress
Suor Mengassini
Daughter of the Charity

P.S. Our Asylum is not supplied with gas and the cooking is done in a 220 Volt. electric oven.
We beg, therefore, that action be taken.

SUBJECT: Power, - Sulphur Mines In Ancona, Pesaro and Forli Provinces.

TO : Director, Public Works and Utilities Sub-Commission, HQ. A.C.C.

1. Plans are now being formulated for the reactiviation of the Carbernardi Sulphur Mine (Montecatini owned), Sassoferato Comune, Ancona Province.

2. Initial operations will have a power requirement peak of 500 KW at 30,000 volts, with daily distribution as follows:

0600	to	1400	hours	500 KW
1400	to	2200	hours	300 "
2200	to	0600	"	200 "

3. It is requested that an allotment of power be made in accordance with the above estimate, to be available on/or about 15 October 1944, or as soon thereafter as is possible.

4. Justification for this request is contained in CAL AIRGRAM 2, 15 November 1943, from CCAC to FHMGS which states in par. 2: "Sulphur production should be encouraged to the maximum -- in order to provide a stock-pile in anticipation of needs of liberated Europe. Excluding enemy territories these needs estimated at nearly 200,000 tons annually".

5. It is expected that requirements will increase to 1,000 KW about three months after the start of operations.

6. Rehabilitation of this mine is expected to result in a sulphur production of 1,300 tons per month with 500 KW or approximately 30 % of the present production of Italy and Sicily combined.

7. Demolitions at the mine make it necessary for Montecatini to remove heavy equipment from other of their mines for use at Carbernardi. Before transferring this equipment it will be desireable for them to have assurance that power will be available, and on what date.

Lt Col Rapp

10/9

Declassified E.O. 12356 Section 3.3/NND No. 785019

8. For your information, two additional sulphur mines of potentialities and power requirements similar to Carbernardi are located in Pesaro and Forli Provinces, a short distance north of the present front line.

SUBJECT : Rome-Ostia, Lido Railway.

TO : Public Works and Utilities Sub-Commission. ✓

1. This Railway, in the past, operated a service Rome-Lido, and on the advent of A.M.G. 5th Army authority was given without consulting this Commission for the resumption of steam services, using coal which should have been frozen.

2. When coal supplies were exhausted, this Commission was unable to grant further fuel because the line could not claim any priority as fulfilling any help in the war effort, but the Director General Military Railway Services has agreed to 50 tons coal being allocated as a temporary measure to enable the Company to complete repairs to Antici of its electrical installations.

3. The Railway Company states that it will obtain current for operations from the City of Rome on the same basis as the street car lines.

4. The matter is brought to your notice because our finding is that the railway does not in present circumstances fulfill an immediate need, and the power situation in Rome appear to be such that none is available for secondary uses. Your observations will be appreciated.

5. It is not our intention to stop the rehabilitation of the line in readiness for its use; but it is not felt at the moment that its purely passenger operation should be supported.

Lt Col Harper

I was told that a portion of the track had been removed, If that is so, the whole thing falls by the wayside. Pls look into all angles of this before replying. D.J. 16/9

CONFERENCE AT SIENA

- Wednesday, 13 Sept. 44 -

1. Reference the attached letter dated 2nd of Sept. 44.

I attended the above Conference at Siena. Most of the morning session was taken up in political and administrative questions, of no direct concern to this Sub-Commission.

The afternoon session went into details on certain matters, and in reply to what was said by the speakers I considered it necessary to make observations on the following points:-

(a) Electricity Rationing.

Regional Commissioners stressed the vital importance of getting the grain crops to the mills for grinding, and put in a plea for first priority of any power available for running these flour mills.

I said that I was sure that Lt.Col. Lapper and all his officers were fully aware of the urgency, and that it would obviously be the duty of each and all of the Regional Engineers in the Northern Regions to see to this. As an actual example I said that the Regional Engineer VIII had informed me (the day before) that he had been in Florence till late in the evening on Monday 11th Sept., in order to get power through to a flour mill, so that it could work all night. He had achieved this in the face of clea r opposition from Engineer representatives of Armies, at the moment in Florence.

(b) Mines clearance.

This had been mentioned by a speaker in the morning, and by another in the afternoon, but only in an incidental manner. I said I wished to draw the attention of all present to the fact that roads, buildings and particularly bridges reconstruction are being retarded by the presence of uncleared mines. It was not fair to expect the Genio Civile and their contractors and workmen to approach such places, in many instances, under present conditions. I mentioned the case in Region IV in August, where an Italian Army Engineer unit had come, had stayed nearly 4 weeks, and having no equipment and no training, they had gone away without clearing a single mine. I said t his kind of thing could not go on. I said that in areas in Regions IV and V, and particularly south of Rome, there may be very many thousands of uncleared mines, impeding every kind of reconstruction work.

The Conference seemed to agree about all this, and Brigadier LUSH asked Col. CHIPPS to explain what has been done recently. This was to the effect that, for obscure reasons, the Italian Army will not

(b) Mines clearance.

This had been mentioned by a speaker in the morning, and by another in the afternoon, but only in an incidental manner. I said I wished to draw the attention of all present to the fact that roads, buildings and particularly bridges reconstruction are being retarded by the presence of uncleared mines. It was not fair to expect the Genio Civile and their contractors and workmen to approach such places, in many instances, under present conditions. I mentioned the case in Region IV in August, where an Italian Army Engineer unit had come, had stayed nearly 4 weeks, and having no equipment and no training, they had gone away without clearing a single mine. I said t his kind of thing could not go on. I said that in areas in Regions IV and V, and particularly south of Rome, there may be very many thousands of uncleared mines, impeding every kind of reconstruction work.

The Conference seemed to agree about all this, and Brigadier LUSH asked Col. CRIPPS to explain what has been done recently. This was to the effect that, for obscure reasons, the Italian Army will not undertake this work. It is to be done by Italian civilian agencies, with 5 mine-clearance training-schools established at different places, and at these about a hundred civilians each will be taught the work. Later, they will go out in teams of about 10 each. The question of feeding and transport was raised, pointing out that this would be much more difficult for civilians than for Army personnel. No answer was given.

I said that it seemed to me, under this training scheme, that we may be lucky if we get these teams to clear any mines much before Christmas; even if the training scheme is successful and these people get necessary equipment.

However, the position is that Col. Cripps is now sponsoring this proposal.

Declassified E.O. 12356 Section 3.3/NND No. 785019

(c) Re-housing.

This was mentioned by several speakers. I outlined the present position, as I knew it, and remerked that we would like to know the legal position in this country about re-using such things as steel girders, timber, fittings, and particularly bricks from demolished buildings. Does the ownership of this material vest in the original owner, or does it re-vest in the local authority or the Government, and is an individual certificate given, as to each property? I said that with the autumn and winter coming on, the main thing is to get a roof over people's heads, and that by re-using such materials, including tiles for roofing, an enormous amount of transport will be saved because buildings only partially damaged, say in an adjacent street, can perhaps be repaired. I said that proper use of such salvage material may be expected, possibly, to go 25% of the way towards urgent first-aid repairs, at any rate so that many people may have a watertight roof over their heads.

SUBJECT : Fuel and Electricity Requirements - Manifatture Cotoniere Meridionali.

TO : Coal Division, Industry Sub-Commission.
Public Works & Utilities Sub-Commission.

1. Reference is made to this HQ. ACC/5074/IC of 1 July, para 3.

2. Information has just been received that first shipments of cotton from U.S. and Sicily are en route and that the former may be expected to be landed within a few days; the latter is expected to commence arriving in 14/28 days.

3. It is urgently requested therefore that the requirements of fuel and electricity scheduled in ACC/5074/IC of 6 June, as justified in our a/q letter of 1 July, shall be implemented with as little delay as possible, and commencing not later than Oct.1

4. For easy reference there are recapitulated below:

MONTHLY REQUIREMENT:		Oct.	Nov.	Dec.	And monthly to follow.
Coal (Tons)	ANGRI	100/120	100/120	100/120	100/120
	NOCERA	24/30	24/30	24/30	24/30
	FRATTE	380/420	380/420	380/420	380/420
Naphta (Tons)	ANGRI	-	-	-	-
	NOCERA	-	-	-	-
	FRATTE	170/190	170/190	170/190	170/190
Electricity (Kwh.)	ANGRI	270.000	270.000	270.000	270.000
	NOCERA	330.000	330.000	330.000	330.000
	FRATTE	225.000	225.000	225.000	225.000

134

Declassified E.O. 12356 Section 3.3/NND No. 785019

NOTE: Coal requirements as between imported and Sardinian are set out in a/q letter of 1 July, viz:

ANGRI, NOCERA } 2/3 rds imported, 1/3rd Sardinian.
FRATTE All imported.

It is considered by this HQ. however that all Sardinian can be made to serve for ANGRI and NOCERA, but that the vertical tube boilers at FRATTE cannot operate except with hard coal.

SUMMARY-MONTHLY TOTALS:

Coal	Sardinian	150	550	Tons
	Imported	400		
Naphta			180	Tons
Electricity			825.000	Kwh

Subject : Electricity Requirement of S.A.F.F.A. Match Factory.

To : Regional Engineer (V Region).

1. Reference is made to the attached copy of a letter dated 12 September received by the Public Works and Utilities Subcommission, Ref. ACC/3648/PWD, Subject: Match Production. This letter requests information as to the availability of electricity for the S.A.F.F.A. Match Factory, at Jeni.

2. It is requested that arrangements be made for this supply of power if possible, and that the action taken be reported to this Sub-Commission.

W. M. LADNER

Subject : Electricity rationing decree

To : HEADQUARTERS SOUTHERN REGION
Attention Capt. Ryan

1) - Reference your letter 21 August 44 and our conversation of to-day.

2) - In the light of the present situation on electric power in Southern Italy we do not reccomend that Eng.Ruggiero send out his proposed letter on electricity rationing at the present time with respect to the inforcement of Sections 7, 9, 10 of the decree.

3) - It would be well, however, for Eng.Ruggiero to write the various Provincial Commissions to insure that their committees are well organized and that they have a uniform plan of action worked out which they can put into operation if it becomes necessary to demand street inforcement of the decree in South Italy or portions of South Italy.

W.M?LAFFER

15 Sept. 1944

Subject : Electricity Supply at Rieti.

To : Regional Engineer, Region IV.

1. It is understood that during June, the electric generating station of Cisa Viscosa at Rieti was started to provide an emergency supply of electricity for Rieti and vicinity. It is further understood that at first the electrical demand on the plant was only about three hundred kilowatts, but that it has since increased to over 900 kilowatts, a sizeable proportion of the peace time demands for the area.

2. The Cisa Viscosa plant is not designed to operate in the manner in which it now must function, and is consequently running very inefficiently. It is therefore desirable that this plant be shut down as soon as possible.

3. As of yesterday, another generating unit was started at the Cervara generating station, near Terni. The Cervara plant is connected to the UNES substation at Rieti. The unit just started has an output of about 1,600 kilowatts.

4. In view of the foregoing, it is directed

(a) That orders be issued to the management of the Cisa Viscosa plant to cease operation of the station by 20 September, 1944.

(b) That orders be issued to the Terni Company to provide a maximum of 700 kilowatts to the UNES substation at Rieti, for Rieti and vicinity, and that should this amount be exceeded, the entire supply will be stopped immediately at the Cervara station until the demand is reduced to a point below the permitted limit.

(c) That orders be issued to the UNES Company to deenergise outgoing feeders from the Rieti substation whenever necessary to keep the demand below 700 kilowatts.

1370

Declassified E.O. 12356 Section 3.3/NND No. 785019

(d) That the provincial commissioner of Rieti be informed of the foregoing, that he be instructed to collaborate with the [redacted] Company in preparing a schedule of feeders to be deenergised, and that he order the disconnection of consumers, or the deenergising of feeders during certain hours if necessary, in order to keep the demand below the prescribed limit.

Ref. Mines 412.4 — 7 September 1944

Subject : Power Requisition - Mining

To : Director, Public Works and Utilities Sub-Commission

1) - For your information enclosed is our estimate of electric power requirements for the principal mines of Region VIII.

2) - The requirements for the Ribolla lignite mine are the only requirements for the mnies listed which, in our view, should be met immediately as this mine is now on a producing basis. These reguirements are as follows :

	Robolla Mines	
	Maximum H.W.	HWH/ day
Immediate	250	3,000
8 Sep. to 30 Sep. 44	370	4,000
10 Oct. to 31 Oct. 44 ...	400	4,400
Nov. & Dec. 44	550	5,000

3) - Plans for the operation of all mines except the Ribolla mine listed on the enclosure are not now formulated and are indefinite. However it is important that the Siele and Argus mercury mines, the Govarrano Niccioletta, Boccheggiano and Ravi Marchi pyrite mines and the Monte Valerio tin mine be supplied with maintenance power as indicated on the elconsed table. These mines may be activated to a greater or less extent within the next few months and maintenance power will keep the water pumped out and otherwise keep the mines from deteriorating.

10 Sept. 1944

SUBJECT: Electric Service to hospital
Clinica Quisisana - n° 5,
Via G.G. Porro - Roma.

see letter 22 Sept from Elec. Cont. R.A.A.C. Com.

TO : Hqts Region IV att. Regional Engineer.

1. The above establishment is to be considered of the highest priority due to the fact that many of the most serious of operations are performed in this hospital.

2. Inquiry has been made of the Public Health Section of Region IV and they state that requests for service have been made on several occasions in the past but that no service, other than "turno" has been made available to them.

3. Sterilisation of surgical instruments and emergency operations are the principle difficulties as well as the elevators for the movement of patients which must now be done by hand up and down stairways.

4. Our investigation shows that the service is now coming from cabin No 727 of the A.C.E.A., which is not on a preferential circuit.

5. Investigation also discloses that an establishment accross the street is served from cabin No 2604 of the Romana Co. which is on a preferential circuit. The possibility of extending a low tension circuit from this cabin to the hospital should be considered.

6. The only alternate would be a portable generating plant to the hospital capable of furnishing energy for the most essential needs, such as sterilizing instruments, X ray equipment etc. It is estimated that a 25 KVA generating set would be sufficient but this should be checked.

7. Hospitals are conceded to be in a high priority category and every effort must be made to provide continuous service.

Declassified E.O. 12356 Section 3.3/NND No. 785019

3. We have contacted R.A.A.F. and are informed that they are now working on the matter through the power companies in Rome.

ROMA - PIAZZA DI SPAGNA, 72
TELEF. 68-457

Sep Recd 060 Civ.

Roma, September 3, 1944

Director, Public Works & Utilities Sub-Commission,
Headquarters, Allied Control Commission,
Rome, Italy.

Sir:

I respectfully submit this application for continuous day-time use of electric current for professional purposes, alleging the following:

1. I am an Egyptian citizen, resident in Rome and practising dentistry for many years, with dental offices at Piazza di Spagna 72, first floor.

2. Under the present current rationing plan, I am at present limited in relieving the dental needs of the general public to one day in four when current is available to operate my dental equipment. On currentless days, it is impossible to operate x-ray machine and other necessary equipment.

3. Among my patients are numerous casual visitors who are members of the Allied Armed Forces in Rome, who are referred to me for emergency dental treatment by the American Red Cross and other Allied agencies. Many such service men in urgent need of my dental services have had to be turned away unrelieved on days when current was not available to operate dental equipment.

4. The building in which my dental office is located is occupied principally, if not altogether, by offices which are closed at night, and the amount of current consumed would therefore be limited to that needed for operation of equipment during the day time, without the drain on available power supply incidental to residential use.

5. It is my understanding that electric current is now being used continuously in a building near that in which my dental office is located, and that the technical difficulty and cost of extending lines to furnish continuous service, as applied for herein, will be minimum.

It is respectfully requested, in view of the foregoing reasons, and for humanitarian considerations, that this request be favorably considered.

Respectfully, 1319

Andrea Kemal Ovadia,
M.D.—D.D.S.

Subject : Request for power Brick Factories - Lazio

To : HEADQUARTERS REGION IV
Attention Regional Engineer

1) - Attached request for power totals 500 H.P. or about 375 KW of demand if all were operating at the same time.

2) - In view of the amount of electric energy required and the present situation on power this request should be looked at very carefully.

3) - The priority of these factories for the manufacturing of bricks and the purposes for which the bricks will be used will be an important factor in determining whether these factories should be given power.

4) - Therefore, if deemed advisable please make the necessary arrangements for the power through the military district having jurisdiction advising this Sub-Commission of any action taken.

OGGETTO: Fornitura urgente di energia elettrica ad alcune fornaci del Lazio adibite alla fabbricazione di coppi.-

Dalla riunione tenuta presso questo Ministero in data 4 sett. c.a., nella quale è stata esaminata la situazione della produzione dei laterizi, allo scopo di provvedere con ogni possibile urgenza, in vista dell'approssimarsi della stagione invernale, alla ricostruzione delle abitazioni dei sinistrati, le seguenti ditte hanno assicurato di poter provvedere ancora per altri due mesi alla fabbricazione di coppi con asciugamento naturale, purchè sia loro concessa con urgenza la fornitura di energia elettrica, la cui potenza necessaria in rapporto all'attrezzatura risulta indicata a fianco:

1) S.A. Fornaci e Cave - Castelgiubileo - forza motrice 150 HP
2) S.A. Laterizi - Monterotondo - forza motrice 100 HP.
3) Impresa Tiberina - Monterotondo - forza motrice 150 HP
4) S.A. Industria laterizi ed Affini -Frosinone - Forza motrice 100 HP.

MINISTRY OF INDUSTRY,
TRADE AND WORK.

The Minister.

Ref. No.1060

To: Mr. A.C. ANTOLINI
ALLIED CONTROL COMMISSION
Room No.40 - 2nd Floor.

SUBJECT: Urgent supply of electric power to some Furnaces in Lazio, employed in manufacturing tiles.

During the meeting held in this Ministry on September 4th, in which has been examined the situation of bricks production in order to provide most urgently to rebuilding war-damaged houses, considering the approaching of winter season, the following firms have conveyed assurance to be able to provide, for two month longer, to the manufacturing of naturally dryed tiles, provided they are most urgently supplied with electric power.

The power required in reference to the plants is stated as follows:-

1) S.A. Fornaci e cave - Castel Giubileo - Propelling power: 150 H.P.
2) S.A. Laterizi Monterotondo - Propelling Power: 100 H.P.
3) Impresa Tiberina - Monterotondo - Propelling Power: 150 H.P.
4) S.A. Industria Laterizi e Affini - Frosinone - Propelling Power: 100 H.P.

We beg thereby to issue proper orders for the allotment of electricity for propelling power to the above mentioned Firms.

THE MINISTER.

Rome, Aug. 25th 1944

Ministey of Industry,
Commerce and Labour.

THE MINISTER

Memorandum for the
Economic Section, A.C.C.

For the attention of
Sig. ANTOLINI.

Subject: Junction with the preferential electric-power cable.

The Ministry of Industry, Commerce and Lacour, has asked that the building in Via Flavia, 6, in which the "Gabinetto" and the chief central offices are installed, should be joined to the preferential cable of the Roman Electrical Company in order to be able to avail themselves in continuation of the electric lighting, of the lift, (of the calls,) etc. (BUZZER SYSTEM)

The Roman Electrical Company, in order to effect the junction, must be authorized by the Technical Office of the Allied Military Command (Capt. Naff - Via del Mare) to do so.

In the Via Flavia 6 building there are not private consumers.

The part not yet returned to the Ministry is in fact, only for the time being, occupied by the Rome Revictualling Board offices, which are closed in the evening.

We beg the Economic Section kindly to intervene so as to get the request granted with the utmost speed.

by order of S.E. GRONCHI .

MAJOR CROWTHER'S REPORT

(b) & (c) - Interumptions to the Sulphur Mines during this period were general. It is quite wrong to suggest that the mines were singled out rather that domestic and other lower priorities.

The breakdown at the Catania Plant was unfortunate. Two boilers collasped at a time when three Hydro Stations using the same water were out of service for essential repairs to the water tunnel and pellars supporting it.

The Priority of the Mines is respected by all departments of the S.G.E.S. and being maintained.

During the absence of Lt.Col.Bolick, Major Crowther discussed the question with Lt.Pollard during a visit to the Palermo Office. Immediate attention was given to the question and clearly defined in collaboration with the S.G.E.S.

Lt.Pollard has definately mis-interpreted Major Crowther's reply to the question, why are the towns and villages allowed to have electricity and the mines be cut off.

The reply was that Military Priorities have consumers in every area and zone, that I cannot cut off all domestic consumers and so interumpt the Military demand.

I agree that failing unavoidable breakdowns the Sulphur Mines will

RC/A

Rome, August 31st,1944

Subject:Station a Tarquinia's Paper-Mills.

1) The connection of the small station of Tarquinia's paper mills to our 10.000 Volt net will take place with the provisional utilization of a concrete line with alluminium conductors belonging to Montecatini Company,which was only slightly damaged by air-raids.

2) An agreement has been therefore entered with Montecatini Company which has consented ,provided the assent of the Navy Ministry which is expected soon.

3) The works wanted are about to be finished,there only remain the repairs of the Montecatini line to be done,which will presumably require a week's time after their beginning, which however could still not be effected on account of transportation difficulties.You know already that this is the principal difficulty;getting more and more serious,of our Service.

4) It would have been possible to have sooner the station entering into service by connecting it with the low tension net of Tarquinia's town,but we preferred to abstain from it for obvious reasons.

5) Actually the power attainable is limited by the 500/10.000 V transformer of 175 KVA,however the turbins could not give more on account of exceptionally low water conditions of the river Marta.We have nevertheless provided to look for the winter season for a larger transformer,and we hope to have found it at Società Generale Esplosivi e Munizioni at Orbetello Scalo, for 500 KVA.

6) We will inform you of the further progress of this matter.We foresee except the incognita of transportation- to be able to put the station into exercise by the middle of September.

ACC/060/PWU

5 Sept. 1944

SUBJECT: Electrification of Railways

TO : V.P. Economic Sec.

1. Attached hereto is a copy of a letter from the Transportation Sub-Commission regarding electrification of the Naples - Rome line, with copy to us.

2. This, in connection with discussion held at this H.Q. regarding A.C.C. Transportation Sub-Commission taking over the direction of Transportation operations within A.C.C. territory from the Transportation Corps with the Armies, both British and American, raises an important issue.

3. The Minister of Public Works is charged with new railroad construction. In fact he has a separate division on this. He is also charged with "war damage reconstruction". The Public Works and Utility Sub-Commission is charged on the one hand with the reconstruction of Military Highways and Bridges, and on the other hand with the overall planning and execution of electrical rehabilitation.

4. The Transportation Corps rebuilds and rehabilitates railroads required for military operations, the same as is done by Army Engineers in Army Zones. The Transportation Corps however has heretofore operated in A.C.C. territory as well and has carried on reconstruction work there, including certain electrical rehabilitation.

5. If the Transportation Sub-Commission is to take over operations in A.C.C. territory the question must now be raised, who is going to undertake reconstruction work? Is the Transportation Sub-Commission going to engage an engineering staff, both for railroad and electrical work, or is this task to be taken over by the Public Works and Utilities Sub-Commission, which is already doing some of this work, because our Regional Engineers handle transportation problems in the Region and our

Declassified E.O. 12356 Section 3.3/NND No. 785019

139

engineers are used in connection with these tasks, including some railroad and railroad bridge construction. Furthermore, since the P.W.& U. Sub-Commission is charged with the overall electrical planning and rehabilitation, and since we already are furnishing electric current from our supply to operate certain railroads, it must be obvious that we can not have two branches within A.C.C. handling similar problems with a resultant overlapping of functions.

6. The recommendations are made that:

(a) The Transportation Sub-Commission handle all Transportation operating problems, including normal repair and maintenance of railroad tracks, a function always placed under the railroad operating branch, and not the railroad engineering branch, which handles all new construction or reconstruction.

(b) That all reconstruction required by the Transportation Sub-Commission such as bridges or buildings, new track construction and electrical rehabilitation work, be done by the P.W.& U. S-C. as the engineering department for A.C.C.

In line with this program, bridge engineers or electrical engineers, now in the Transportation Sub-Commission, should be transferred to the P.W.& U. Sub-Commission.-

SUBJECT: Electric Power for Railway use
Foligno and Fabriano.

TO : Military Railway Service A.P.O. 400
Office of Director General
att. Lt.Col. Daugherty Supt. M.P.

1. Reference your letter 22 Aug 44 to C.E.B. Hq. A.A.I.

2. This Sub-Commission has taken over the functions of the C.E.B., however, the requests for power for military uses should be forwarded to the officer in charge at the military district in which the electric service is to be used.

3. The requirements of MRS at Foligno would come under n.1 Dist.

4. The same district would have jurisdiction in the case of the MRS requirements at Fabriano.

5. All electric power requests are presented to the Electrical Committee at the Local Resources (Italian) Board A.A.I. which meets around the 15th of each month this applies to both military and civilian requirements.

6. All military and civilian needs are considered and recomended by this subcommittee, to the committee of the whole, for approval.

7. We have contacted the officer in charge of No.1 district and he will arrange to have the 25 KW wanted at Fabriano made available. With respect to the 1000 KW wanted at Foligno we are informed that that amount of power could

Declassified E.O. 12356 Section 3.3/NND No. 785019

1290

be handled by the facilities there but it would have to come from the Terni Plants.

8. Since the allottments from the Terni plants to Sept. have already been made it is suggested that contact be made with no.1 district on the matter to determine whether this quantity was included in their bid for September.

9. A request should also be made for October.

W.M. LAPPER,
Lieut-Colonel,
Chief, Util.& Adm.Div.

TRANSLATION NO. 178

S. MASSIMO INSTITUTE

August 22, 1944

TO: Allied Command

I take the liberty of disclosing a difficulty which this Institute is encountering and which can easily be surmounted with the help of your Allied Command, if you will be so kind as to examine it.

The problem is that of supplying electric power which is essential for the proper operation of the S.Massimo Institute, owned by the Vatican. Not only do we have the elementary and classical school, but in the huge building, located on the piazza della Stazione, there are also the lodgings of the managing, teaching personnel and the servants, making a total of about sixty persons, occupying all the floors and who make it necessary, therefore, that the entire building be supplied continuosly with electric power.

The lack of electric power, moreover, paralyses all the sanitary services which are so essential in an Institute which is attended by more than a thousand students; the water necessary for such services is pumped electrically for a height of more than thirty meters.

Of the various solutions to this problem, we should like to submit three. As we do not intend closing the Institute, we hope you will kindly consider these proposals and adopt the one you consider most convenient:

1) enable the Institute to make use of a special line which will assure a constant supply of electric power.

2) attach the Institute's line to the generator which feeds the Albergo Continentale and which is just beneath our windows.

3) Allot to the Institute an adequate amount of gasoline (at least 50 liters per day) for the operation of a generator which is at our disposal.

While awaiting your examination of these propsals and your favorable reply, I extend my thanks to you.

128

Very truly yours,

/s/ R. Ernesto Rinaldi
Dean of the Institute

Ref. :

29 July 1944

SUBJECT : Requirements of Bank of Italy for Production of Currency.

TO : Vice-President, Economic Section.

1. The paper mill of the Banca d'Italia at 53 Via dei Serpenti (annex to main building) will require the following materials, as from 7 August 1944 :-

(a) 12 quintals per day of oil (nafta) normally used for trucks, with specifications as given below :

(1) specific gravity 0.850 to 0.950 at 15 degrees C.
(2) flash point 65°C to 150°C.
(3) viscosity not less than 40° Engler at 20°C.
(4) sulphur content not more than 0.5 per cent.
(5) free of water and mechanical impurities.

(b) 25/30 quintals per day of coal of a type which produces a short flame.

(c) 300 tons of white cellulose held by C.I.S.A., Viscosa, of which 200 tons are held at their Stabilimento in Rome and 100 tons at their Stabilimento in Naples.

2. The paper mill of A. Sordini di Pale, at Foligno, will require :-

(a) Continuous use of a truck of 50 quintals for transporting paper to Rome and for gathering raw material in Lazio, Marche and Umbria.

1278

(b) Two barrels of lubricating oil.

3. The Stabilimento Aristide Staderini, 45 Via Baccina, Rome, will require:-

(a) 13 quintals per day of oil (nafta) meeting the same specifications as under (1) (a).

(b) Gasoline, oil, and grease in sufficient quantities to operate two trucks and two automobiles, alcohol to clean

Declassified E.O. 12356 Section 3.3/NND No. 785019

the printing machinery, and lubrication for the machinery. 1255

(c) Transportation for workers to and from their homes.

4. The Istituto Poligrafico dello Stato will require :-

(a) One truck for transportation of material and product, and means of transportation for several hundred workers to and from their homes.

(b) Gasoline, oil and grease for the transport, lubrication for the printing machinery, and alcohol for cleaning the printing machinery.

5. The above requirements are exclusive of electric energy, permits of various kinds, and release of machinery and printing materials by PWB. However, the requirements for oil for fuel (nafta) may be reduced or even eliminated if a full supply of electric energy is assured to each of the Roman plants on a 24-hour basis.

For Captain MILBRY W. STONE, USNR :

Colonel,
Joint Director,
Finance Sub-Commission.

JHP/jc.

28 July 1944

Ref. :

SUBJECT : Electrical Energy for Production of Currency for Banca d'Italia.

TO : Power Allocation Board, RAAC.

1. In order to provide assurance of continued service to make possible the production of a new currency within the required period of seven months, it is essential that the following three establishments receive direct lead-ins from the hydro-electric circuit, and not be forced to rely on the thermal circuit, which is subject to interruption, by reason of the demands of competing users of electric energy.

(1) Banca d'Italia-Officina Carte Valori -
53 Via dei Serpenti, Roma
(2) Stabilimento Aristide Staderini -
45 Via Baccina, Roma
(3) Istituto Poligrafico dello Stato -
Piazza G. Verdi, Roma

2. Twenty-four hours of continuous operation will be required in each plant, in order to correlate the rates of production and to secure the completed output of approximately 150 billions of new lire currency within the requisite period of seven months. This will require a daily production of 3 million notes, following the preparatory period. This schedule cannot be met if there is interruption in the electrical energy supplied to any one of the three plants.

3. It is especially important that the Stabilimento Aristide Staderini receive current for 24 hours per day at once, as the artists who are producing the master plates, on which the entire schedule of production must wait, are now unable to work 24 hours per day. At present, current is available only from 2200 hours to 0600 hours each day.

MILITARY RAILWAY SERVICE
Office of Director General

APO #400
22 August 1944

Subject: Electric Power for Railway Use.

To: Central Electrical Board, Hq., A. A. I.

1. Refer your file 2131/1/Q2, 19 August 1944, and attached Allotment of Electric Power - Sept. 1944.

2. We note that the power allotment in Central Italy to the TERNI CO. and to UNES ANCONA has been increased considerably but no allotment specified for railway use in this area.

3. We have applied in a letter of 28 July 1944to the Public Works Utility Sub-commission, ACC for 1000 KW allotment for the railway shops at Foligno. This power will be much needed to maintain equipment for effecient operation of the railroads in the areas north of Rome. 83

4. Will you please inform us as to whether the above required power will be available to us.

File for applications for Electric Power

Ref. 5A.TCU/1500/300

22 August 1944

TO: Regional Commissioner, Region IV.

1. Enclosed herewith are copies of letters addressed to the Electrical Distribution Companies. The Electrical Companies recommend the action authorized and it is strongly recommended by the Electrical Section in order to reduce peak loads in view of the forthcoming reduction in electric power to the city.

2. The facts are as follows:

a) There are now special meters serving each consumer having electric cooking and water heating.

b) Only approximately 10% of the consumers of the current are affected. These 10% are the well to do.

c) This will reduce peak loads an estimated 2000 Kw.

d) Thirty days will be necessary to accomplish the desired action.

3. In view of the fact that this is a matter affecting policy, the papers are forwarded to your office. If approved it is requested that they be sent to the Electric Companies.

4. It is requested that this office be kept advised of the action taken.

SUBJECT: Power for ACC Printer.

TO : Public Works and Utilities Sub Commission.
Attn. Capt. LAUGHLIN.

1. It is hereby requested that power service for the ATEL Tipographia, 9 Via Francesco de Sanctis, Rome, be changed from night service to day service. (0800 to 1800 hrs.)

2. Most efficient power would be a 220 volt service, however at present only about 180 volts are being delivered. This latter figure is apparently adequate.

3. The ATEL Tipographia has been allocated to ACC by PWB and is doing work exclusively for the ACC. At present there is a great amount of work on order, and the change in working hours would greatly speed delivery. In addition this change in power hours would reduce ACC printing costs between 30% and 40 %.

Headquarters A.C.C.

1. Reference is made to our ltr. 926.1 of 26 July 1944.

2. Societa Anonima Industrie Minerarie (S.A.I.M.) draws attention to the irregular supply of power to their sulphur mine at Altavilla - Irpina, Avellino Province.

3. The company is receiving 250 KW from Societa della Campania, it appears that operations have to be suspended for several hours nearly every day through interruptions to the power supply.

4. The S.A.I.M. also claims that the power company is in a position to increase the peak load to 450 KW.

5. The production of sulphur is of paramount importance both to Agriculture and Industry. If power is increased from 250 KW to 450 KW the mine will be able to step up its production roughly in that proportion.

6. It will be appreciated if the power position can be investigated and instructions be issued to the power company to maintain continuity of supply.

7. May the full power demands at 450 KW be made available to the mine please?

8. It will be appreciated also if this office can be informed of the result of your enquires and of the action which it has been found possible to take.

SUBJECT : Electric Power Control Terni

FILE N° : R4/ENG/700(g)

In view of the present shortage of electric power it is deemed advisable that arrangements should be made locally to institute a program for control of the consumption of electrical energy. A recent report received from Major Bell, Terni field representative of the Public Works and Utilities Sub-Commission states:

"Need is apparent for rationing and distribution scheme in Terni Province."

It is requested that arrangements be made locally with representatives of the Commune, the power distributing company, and the Allied agencies concerned, to control the use of electrical energy, authorising only connections which are necessary. It is recommended that control be accomplished by the power company under direction of the local Provincial Commissioner.

Only such civilian uses as are necessary for the general public welfare should be authorised for full time use and purely personal uses strictly rationed. The unrestricted civilian use of electrical energy should not be permitted. General policy should be as outlined in letter of 10 July 1944, copy of which is attached, (Incl.N°1), due allowance to be made for local conditions.

A copy of this letter is being sent (to your office for delivery) to the power company:

"Società TERNI", Terni (Attention: Director Mr. Crisi and Ing. Bocchicchio)

instructing them to cooperate with the Communal and Provincial authorities in instituting and enforcing the program for control of utilization of

Ref. ACC/S161/Com

FMR/JR/ec

19 August 1944

SUBJECT: Electric power for Match-factories at Perugia and Jesi.

TO : Industry -- Subcommission

1. The Match factories at Perugia and Jesi, both belonging to the SAFFA, have a manufacturing capacity of 3.500.000.000 respectively 5.500.000.000 matches per year. Accordingly to informations obtained from the Consorzio Industrie Fiammiferi these factories have sufficient stocks of raw materials for several months and would be able to begin working if they could obtain the necessary electric power. The power quantities needed per month are

1600 KWH for Perugia
and 5000 KWH " Jesi

2. In view of the great need for matches for civilian distribution throughout Italy, tax revenues, reducing black market operations, it is believed that very high priority should be given the two plants. They use very little power. Region IV and AMG Rear 8th Army, in order to get the assignment of the necessary electric power, should be urged to allot this power at the earliest possible moment.

Ref: Mines-924.3

15 August 1944.

SUBJECT: Power for Lignite Mines.

TO : Public Works Sub-Commission.

1. There are at present urgent demands for lignite for Italys industry and the most immediate and best quality is from the Ribolla Mine in the Grosseto Province. This mine is located about 25 miles due north of Grosseto Commune.

2. The loading of present stocks, cleaning of methane, and pumping from the mine in order to resume operation, all depend on electric power. If power is not allotted the program will certainly fail and your utmost assistance is urgently requested.

3. The requirements will be as follows:

DATE:	KW:	KWH/MONTH:
Last week August 1944	150	
September	150	60,000
October	250	90,000
November	300	120,000
December	550	150,000
January, 1945	550	150,000
February	700	330,000

and to continue at this rate.

4. It is requested that this office be advised of your accomplishments on this request as it will affect production planning.

SUBJECT: Electric Power

TO : Electric Power Section of
Public Works and Utilities S/C
(Attn: Lt.Col.Lapper)

1. Carbon bisulfide is needed with great urgency for the following purposes and ~~not down~~ with this order of priority :

a) the preservation of grain,legumes and other foodstuffs
b) the extraction of olive oil for food and soap
c) the manufacture of rayon textiles.

There is no present production of carbon bisulfide in Italy.

2. There is an excellent plant for the manufacture of carbon bisulfide at Collestatte,near Terni. This plant has eight electrically operated retorts,each of which can produce about 135 m.tons per month. Four of the eight furnaces are in good condition and are operable immediately that electric power becomes available. Electric power was formerly drawn from the Terni system.

3. It is proposed to put one retort into operation as soon as electric power can be made available. The electric power characteristics of a retort are briefly as follows :

during the initial heating period, the power input rises steadily from 100 KW the first day till it reaches 800 KW on the tenth day,then falls sharply during the next two days to 600 KW. Thereafter for the duration of operation which averages 150 days, the current demand fluctuates narrowly around 600 KW. At some time nearing the end of the 150 day run, a second retort may be brought into operation to ensure continuous production, and thereby impose a brief but additional electric power load. However, if such a practice produces an excessive peak in the demand curve, it will be possible to shut one retort down completely before starting a second one.

4. Electric power sufficient for the operation of one retort at Collestatte,Terni, is sought at the earliest possible ~~date~~. 1255

SUBJECT: Request for electric Power
"Societd dolle Cartiere Meridionali"
Isola del Liri (Prov.Frosinone). Paper Mill.

TO : Hqts. Region IV.
attention: Regional Engineer.

1. Attached letter 14 Aug 44 from Ind. & Comm. S.C. Ref. ACC/5609/IND herewith transmitted.

2. At the present time the power taken f rom the paper mill plant by the Societa Romana di Elettricita is being used for the purpose of repairing and drying out the units at the Ceprano Hydro plant.

3. The S.R.E. needs about 200 KW. for th e period ending about 15 Sept 44 and about 350 KW. up until the end of Sept. At that time S.R.E. expects to have its transmission line to Ceprano back into operation.

4. In view of the importance of getting the Ceprano plant back on the line the points in paragraph 3 above were taken up with Ind. & Com. Dr. Opatowski and he is in accord with this change in schedule of starting operation of the paper mill.

5. However, it will still be necessary to make the necessary arrangements for the power required by the paper mill by contacting the army district in which this factory is located asking them to agree to furnishing the electric power, which is being asked for namely 200 KW.

6. Please make the necessary arrangements and notify Ind. & Com. S.C. A.C.C. direct with a copy to this S.C. for information.

(Attention: Colonel Lapper)

Subject: Electric power for paper plant

1. The paper plant of "Società delle Cartiere Meridionali" at Isola del Liri (prov.Frosinone) is now in course of reactivation under the control of Industry Sub-Commission.

2. The electric power station of the plant supplies at the moment 200 KW. electric power to the Società Romana di Elettricità.

3. It is estimated that the above mentioned plant is going to start production within 8 days,needing the 200 KW. electric power indicated above for the scheduled paper production.

4. Please arrange that these 200 KW. electric power will be put exclusively at the disposition of the paper plant of "Cartiere Meridionali" from 22nd August 1944 onward and instruct the Società Romana di Elettricità accordingly.

(att: Col.Lapper)

Subject: Electric power for paper plant

1. The paper plant of "Cartiera di Ceprano" at Ceprano (prov. Frosinone),which can produce paper,cellulose and wood-pulp,is now in course of reactivation under the control of Industry Sub-Commission. It is estimated that the plant will be ready for production by 1 November 44.

2. The electric power station recovered at Ceprano should be able to produce 8.500 KW of electric power by 1 November 44.

3. The energy required by the plant for own consumption is:

a) - for the recovery of waste paper	20	HP
b) - " " manufacture of wood-pulp	740	"
c) - " " " " cellulose	340	"
d) - " " " " paper	400	"
e) - energy for pumps,boilers,lighting, repairshops,a.s.o.	225	"
Total	1725	HP or rounded
	1.300	KW.

4. The Ceprano mill is scheduled for producing "standard" paper for writing and printing and for manufacturing newsprint.

5. Please arrange that at the 1 November 44 a quantity of 1.300 KW. be allocated to the "Cartiera di Ceprano" in order to meet the requirements of their plant.

HEADQUARTERS
ALLIED CONTROL COMMISSION
INDUSTRY SUB-COMMISSION
A.P.O. 394

4 August 1944.

Ref: Mines-926.1

SUBJECT: Electric Power for Sicilian Sulphur Mines.

TO : Director, Public Works & Utilities Sub-Commission.

1. Reference is made to extract approved by Industry Sub-Commission from MD/M-1 dated 29 July 1944 from Chief, Mining Division, Region I, to Mining Division, HQ., A.C.C. as follows:

> 1. "Report was received from Imera Mines (Trabia - Tallarita) that power supplied to them had been seriously cut down recently and finally on 19 July they had been cut entirely off except for a small amount for pumping water. They had been forced to discontinue mining operations. In the absence of the Regional Engineer, I took this matter up direct with S.G.E.S. As has happened repeatedly in the past, SGES reported that power had been restored by the time my inquiry reached the Agrigento Division, but offered no satisfaction as to why the sulphur mines were singled out for cutting off when it was necessary to reduce load. A letter, signed for Lt. Col. Bolick, was written to SGES asking (a) why sulphur mines had been cut off in violation of our 3rd priority designation, and (b) what steps had been taken to avoid such violations in the future. As pointed out in numerous letters from myself, Lt. Col. Bolick and Col. Hancock and in numerous conversations and conferences in Naples, this so called "violation" is merely a brief ignoring of some ACC "advice". Officers of Reg. I ACC are attempting to make it stick, but I do not anticipate any success in the matter. Maj. Crowther, who is taking over utilities for the Island as Lt. Col. Bolick turns loose, says he sees no way to force the power company to cut off domestic consumers rather than the sulphur mines. Hence the priority designation is of no value whatever."

2. It is requested that you cause a detailed investigation to be made of the situation described in paragraph 1, by an Officer of the Public Works and Utilities Sub-Commission, and that the Director, Industry Sub-Commission be informed as to the facts ascertained.

3. May we have definite assurance from the Director of Public Works and Utilities Sub-Commission that the supply of electric power to the Sicilian sulphur mines will be adequate to the degree which has been agreed upon in previous correspondence?

-1-

Declassified E.O. 12356 Section 3.3/NND No. 785019

4. The suggestion is made that the Public Works and Utilities Sub-Commission bring very strong pressure to bear on the Italian Government to transmit to the Italian Commissioner for Sicily and through that official to the S.C.E.S. the most positive directions that effective action is to take place with regard to the correction of the situation described in paragraph 1.

8 August 1944

Subject: Electric Power for Operation of Ticket Printing Plant, Rome.

To: Public Works Utility Sub-Commission, Allied Control Commission, APO 394, U.S. Army. Att: Lt. Col. Lapper.

1. It is requested that the following power be made available for the Italian State Railways' printing plant located at Viale Angelico 3, Rome, to be supplied daily from 8:00 AM to 5:00 PM:

at 220 volts - a total of 18 horsepower for printing and cutting machines
at 125 volts - two horsepower for plant lighting.

2. Basis of request is that the operation of these printing and cutting machines is urgently required to increase efficiency in connection with M.R.S. activities.

SUBJECT: Electric Power Requirements for Region IV.

FILE N°: R4/ENG/700.

File

Reference conversation, 11 July 1944 on electric power requirements for the area of Region IV, an estimate has been reached which it is believed should be the basis of an initial bid for the area.

It is believed that 4500 KW demand and a monthly energy block of 2,100,000 KWH will be necessary for the area composed of the provinces of FROSINONE, LITTORIA, ROMA (Exclusive of Rome City), VITERBO, RIETI and TERNI. This area contains an estimated population of 4,000,000. The above power is only for essential services and includes no~~y any~~ large manufacturing establishments or other large users of power.

SUBJECT : Restoration of Electrical Power to Railway Workshops in Foligno (Perugia).

FILE N°.: R4/ENG/700(f)

Reference letter subject: Electricity. File ACC/060/ PWU of the 30th July 1944.

UNES Co.(Unione Esercizi Elettrici, Main Office in Rome Via Torino 117) is now supplying electric power in the area of Foligno.

At the present the available generating capacity in this area is about 610 KW, producing in Altolina & S. Giovanni-Porifiamma Stations.

Attached is copy of letter sent to the UNES giving order for the restoration of electric power as requested for the time being.

"Terni Co." is working on repairing the trasmission line Spoleto-Foligno (60 KV) More power is expected to be utilised from the UNES distribuiting system in a month time. It is presumed therefore that almost the full requirements of 1000 KW will be available in this time.

Further information will be given on the purpose.

TO : Regional Commissioner, Region IV.
(Public Works & Utilities - Lt.Col. BRETT)

1. The firm of tanners and belting manufacturers, Francesco Guilli e Figli, TERNI, are in a position to manufacture 5000 metres of transmission belting provided that they can be supplied with electric power.

2. The motive plant consists of 6 motors totalling about 24 h.p., with a monthly consumption of 6300 KWA.

3. Leather belting is one of the most critical industrial deficiencies in Italy, and this particular source is earmarked for Agriculture Sub-Commission for agricultural machinery, the widest use of which is essential if full advantage is to be taken of this year's crops.

4. It will be appreciated therefore, if steps can be taken for the appropriate quantity of electric power to be made available to the above named firm at the earliest possible date, and it is hoped that you will be able to advise this HQ to that effect in due course.

By Order of Capt. STONE (USSR):

John S. E. Todd

J. S. E. TODD,
Colonel,

TO : A.F.H.Q. Coal Section,
att H. . A.A.I.

SUBJECT : Supply of Lignite and Sub Bituminous Coal for Thermal Electric Stations.

1. With reference to your letter of the 17th June and 6th July the present position is that within territary recently occupied there are two mines, one at Pietrafetta (Sheet 15 W.5680) and the other at Riboila (Sheet 15 E.5389) further details of which are attached herewith.

2. There is a stock at Pietrafetta of 30,000 tons and at Riboila of 70,000 tons available for immediate transportation both of which could be moved when the main railway lines are open, in the case of Pietrafetta, to the junction at Kliera (Sheet 13 E.6491) and in the case of Riboila, to the junction about Giuncario (Sheet 15 E.5603). In addition a bridge at a point about E.5787 Sheet 15 on the branch line to Riboila would require repair.

3. It is understood that the main line Rome to Kliera is scheduled for repair at an early date and on completion there could then be normal gauge railway to within 250 metres of the Pietrafetta mine. As soon as possible after the completion of the line a request will be made for movement.

4. Reference conversation with Lt-Col Lapper with Public Utilities Sub-Commission please note the requirement of power for future operation of the mines.

C.W. CALEY,
Lieut Colonel,
Coal Division.

ADVANCE HEADQUARTERS
ALLIED CONTROL COMMISSION
MINING DIVISION
APO 394

In reply
refer to:
Mines-324

3 July 44

SUBJECT : Pietrafitta Lignite Mine.

TO : Chief, Mining Division, Advance Headquarters, A.C.C.

1. I attach a full report on Pietrafitta Lignite Mine

2. The Mine was visited on 29 June 1944 as a result of a signal from A.M.G. Eighth Army, who feared that the dragline excavators would be requisitioned by the Eighth Army.

3. The plant is intact. The mine can be put into commission in ten days from the supply of a comparatively small power unit. Other properties producing a better grade of lignite from underground are not yet investigated but they are not likely to be in production so readily and their demands for power are almost certain to be much greater. In view of these facts it is recommended that A.A.I., be approached with a view to obtaining immunity of plant for requisition.

4. The immediate requirements are:

A. A 200 KW power unit of any type to supply power at 260 volts and 50 cycles. The consulting Engineer of the Company is investigating the possibility of the local requisition of such a plant.

B. If such a plant is unobtainable the following pumping units will be needed to prevent the pit from flooding.
1. One pump to deliver 10000 litres per minute against a head of 20 metres.
2. One pump to deliver 5000 litres per minute against the same head.
The onus of search for this plant may be left the the management.

C. A road bridge, now destroyed, should be put into a state of repair for the transport, by road, of a stock pile of lignite for immediate use and for access to Pietrafitta village. AMG, Eighth Army, is investigating the question of repair of the bridge.

5. It is recommended that all possible assistance be given to the management in acquiring the power unit locally. It is not recommended that any order be placed overseas since assistance on a long term policy may well be confined to producers of superior types of fuel and in any case the plant is required only until the operation of the grid.

Ref. Mines-924

3 July 1944

REPORT

PIETRAFITTA LIGNITE MINE

1. The above mine was visited on 29 June 1944. It is opencast and is located near Pietra-fitta, Province of Perugia. Map reference: (GT Office) Sheet 15, W.526804. The following notes were made:

A. OPERATION:

Held for 30 years commencing 14 October 1936 by Societa Minararia del Trasimeno whose registered address is 4, Corso Monforte, Milan. The capital of the company is 10,000,000 lire wholly subscribed by Comm ANGELO MORATTI, of Milan.

B. HISTORY:

The property was first exploited in 1915 by a company of the same name controlled by an Ing. Farinatta. In 1924 the construction of a power station was commenced; it was financed by Banca Conti, of Florence. It was completed in 1929. This power station never seems to have been a sound economic proposition, it worked on and off until 1936 when the company went bankrupt.

In 1936 the company was reconstructed with capital of 1,000,000 lire by a syndicate headed by Comm. Moratti, and a fresh concession approved as above by the Government in 1936. The capital was increased immediately to 5,000000 lire. In 1943 the partners were bought out by Comm. Moratti and the capital increased again to 10,000000 lire. The new company never attempted to operate the power station.

C. GEOLOGY AND QUALITY OF PRODUCT:

Lignite 7 to 8 metres in thickness and dipping gently to the South is overlain by about 10 metres of Pleistocene sands and clays, it is underlain by Pliocene sandy clays. To the North of the concession the overburden thins out to about 5 metres and towards Lake Trasimeno the lignite pinches out. It is believed to be a lake deposit.

1218

Declassified E.O. 12356 Section 3.3/NND No. 785019

f An accurate analysis of the product is not yet available, but the management has promises to furnish data.

Run of Mine		Sun Dried
40 to 42%	Moisture	28 to 30%
15 to 18	Ash	18 to 21
Approximately equal at 20-23%	Fixed Carbon Volatiles	Approximately equal at 24-23%
	Sulphur	1,82%

Calorific value of sundried product is 4000 calories, (7000 BTU). Features are, friability of lignite, High Fusion Temperature of Ash, 1200 °C. and absence of lime in Ash.

The lignite has been used by Gas Plants, in those it is mixed with imported bituminous coal in proportion of one to three, it is considered to be the only lignite suitable for gas production in view of the features quoted above; of the Sulphur 0.3% finds its way into the gas.

D. RESERVES:

17,000000 tons proved by boreholes
35,000000 tons probable, (This figure includes proved lignite.)

E. STOCKS:

30,000 tons ready to ship.

F. PRODUCTION:

1200 tons per twenty four hours can be produced within ten days of receiving power, 200 KW are required.

In the first semestre of 1943, the production averaged 2500 tons, with a peak, in May, of 3200 tons. Schemes are on foot to open up a new bench, this entails diversion of a stream and after twelve months development the production could be doubled.

G. OPERATION:

Overburden is removed in two stages by Mechanical Shovels, and dragline excavators, electrical driven.

The underlying lignite is then won by hand, loaded into waggons, hoisted to ground level and tipped into drying floors for sun-drying.

The bench of lignite at present cleared of overburden will give about 70,000 tons.

1217

Declassified E.O. 12356 Section 3.3/NND No. 785019

H. POWER:

Power is normally taken from 10000 volt grid running through the property. No power is now available.

The local distribution grid is intact, the mine requires a 200 KW unit of any type supplying current at 260 volts and 50 cycles.

The power station to which reference was made under "History" has been completely destroyed by the retreating Germans. It had been capable of supplying 18000 KVA to the grid, it had three units, each of 6000 KVA driven by steam turbines; pulverised fuel had been burnt in a battery of six boilers. Though well designed the power station appears to have been somewhat of a white elephant. 3.5 kilogrammes of lignite was burnt per kilowatt.

I. MARKET:

20000 tons a month had been supplied to industrial plants in Northern Italy, the principal clients were the cotton and silk manufactures of Lombardy.

20000 tons a year were supplied to Rodina Gas Plant for admixture with imported coal.

A contract had been made for the supply of 60000 tons to Rome Gas Plant in 1944, but owing to transport difficulties, delivery had not commenced. The remaining production was taken by small local consumers

J. TRANSPORTATION:

A normal gauge branch railway from the main line at Ellera, sheet 13, #.6391, near Perugia, to within 250 metres of the loading floors. At this point a bridge has been blown by the enemy. Light railway track can be laid to a loading point to be levelled on the normal gauge railway. The branch line to Ellera had never been operated, and the last 250 metres of track had not been laid.

Pending completion of the railway transport has been by lorry to Finicale, #.4286, or to Magione, #.5496, on the main lines running along the West and East Sides respectively of Lake Trasimeno.

To remove the stock of 30000 tons by road it will be necessary to repair a bridge, road over stream, at #.531800.

1216

Declassified E.O. 12356 Section 3.3/NND No. 785019

This bridge was destroyed by the enemy. AMG, Eighth Army is investigating the feasibility of repair ; had not stores been requisitioned for more urgent jobs by the Eighth Army, the Mine staff could have been in a position to repair the bridge themselves.

E. PLANT:

The essential plant is in intact. Six excavators electrically driven are installed. Three of these are shovels by Ruston Bucyrus and three are draglines (for upper half of overburden) by North West Company of Illinois. All buckets are about 0.4 cu. metre capacity.

Diesel locos for light railways and all plant which could be so treated were buried to conceal them from the marauding Germans.

Pumps are intact but cannot be operated owing to lack of power. At present a stand-by diesel driven pump is capable of dealing with normal summer inflows but will not be sufficient for inflows to be expected after heavy rains.

Workshops and stores have been looted both by the Germans and by Eighth Army. Sufficient equipment, however, remains for routine minor repairs.

F. COSTS:

No accurate estimate of future costs can yet be given. During the first semestre of 1943 the costs were 250 lire per ton and the selling price was 270 lire.

Just prior to the German retirement an agreement was made to bring the selling price to 430 lire to meet increased costs. It is anticipated that future production costs will differ little from the latter figure.

G. LABOUR:

Local labour is good and appears to be loyal, their cooperation in the concealment of plant from the Germans may be noted.

The mine can operate between 500 and 700 men for the production of 1200 tons per day. Between 4 and 5 tons a day can be won per man working on the face.

H. MANAGEMENT:

The consulting Engineer is Ing. Umberto Cattonia of 14 Via Flaminia Cesare, Rome. This Engineer has entire responsibility for the technical direction. The attorney is Dr Mario Chiaffarelli of Perugia. The staff seems efficient and cooperative.

HEADQUARTERS
ALLIED CONTROL COMMISSION
Mining Division
APO 394.

Ref : 924.

Subject: Ribolla Lignite Mine. Preliminary Report.

To : Chief, Mining Division, A.C.C.

1. The above mine, owned and operated by the Societa Montecatini, located on Sheet 15, E 5889, was visited on 13 July 1944. A full report will be submitted in a few days. The substance of the following notes was communicated to the Provincial Commissioner, Grosseto Province.

2. The plant was left intact by the enemy.

3. Quality of Product

The fuel produced would be better described as a low grade sub-bituminous coal than as a lignite.

The following analyses were taken from actual shipments of "coal" screened to the sizes stated:

	+ 50 mm	+ 15 mm - 50 mm	+ 3 mm -15 mm
Moisture	15.1 %	15%	14.8%
dry analysis			
Ash	15.4	22.9	
Volatiles	40.7	37.7	31.5
Fixed Carbon	45.9	39.4	32.8
Calorific Value (Calories) on dry sample	6343 to 6655	5616 to 5884	4567 to 5266
Sulphur	1.44	1.76	1.66
Approximate proportions of above sizes in run of mine coal	22 %	40%	38%

Coal is friable. Ash contains an appreciable quantity of lime. It has a fairly low fusion temperature.

4. Stock

70,000 tons of unscreened run of mine coal is stockpiled.

1214

(1)

Declassified E.O. 12356 Section 3.3/NND No. 785019

5. Tryggerark

The mine owns a normal gage branch railway line eight km in length from Giuncarico at Sheet 15, 9568.

This line is in order, except for a bridge over the Bruna River at 9575 872.

The mine has its own locomotives burning its own fuel, there are no trucks on the sidings.

6. Potential Production

Normally 800 tons per day. The peak was in 1942, when 269,300 tons were produced.

7. Power Requirements

Normally power was taken from 30,000 volt grid and transformed to 260 volt.

Requirements for maintenance, 150 KW or 2,000 KWH per day.
Requirements for production, 15 KWH per ton, or 12,000 KWH per day on full production.

8. Condition of Mine

Owing to particularly heavy ground and to the fear of the breaking out of fires, maintenance is essential.

The mine can recommence production in two months from the supply of power at 150 KW. In a further two months, the full production scale can be reached. If the supply of power is delayed, the time lag for the resumption of coal getting will be substantially and progressively increased.

9. Recommendation.

I recommend that this mine be given a high priority for the supply of power for maintenance, because, if the workings are neglected, it may be a long time before the mine can be put into a production basis with the loss of a fuel which, in my opinion, will be greatly in demand.

(sgd) A.F. RADCLIFFE,
Captain R.E.
Mining Division.

Tel: 475707
AGR/ 31350
SUBJECT: Electric Power for Sulfur Mines at Altavilla.

TO : Industry Sub-Commission, Mining Division.

1. Sig. Mienella, of the S...I.M. mine at Altavilla has made the point that if they are allowed 400 KW for their current power consumption they can operate at capacity and turn out 20,000 tons during the season, against an expected 12,000 tons if they are held to the allotment of 250 KW as at present.

2. It is to the interests of agriculture to have this mine produce the maximum quantity for early shipment to consuming centers during the fall and winter months, so as to reduce the load on transportation facilities during the winter and spring, hence this Sub-Commission recommends the higher allotment of power be granted if at all possible. Sig. Mienella reports that the Soc. Electrica has said that it could be granted as far as the physical availability is concerned.

3. Request the matter be investigated, and that this Sub-Commission be advised of action taken, so that plans can be made to use the sulfur most effectively, especially since the quantities of imported fungicides will be as low or lower that they were this year.

W.A. HARTMAN
Lt. Colonel
Director.

(Att. Lt. Col. W.M. Lapper)

1. Reference is made to your letter of 6 July 1944 to which you attached a copy of a letter from the Transportation Sub-Commission A.C.C. requesting electric power for operating additional Secondary Railways (Electric) in the Naples Area.

2. This matter has been discussed with the office of the Region III Engineer and it was the opinion that due to the electricity situation in Southern Italy no additional electric power be allocated to the Secondary Railways (Electric) mentioned in this request.

R. A. RYAN
Capt. Spec.Res.
South Italy
Electrical Engineer

Subject: Operation of elevators,
A.C.C. HQ.

To : HQ. Commandant, A.C.C.

1. At the meeting of the "Electrical Power Control Committee", "Rome Allied Area Command", of Thursday, 13 July 44, the matter of electric power supply to all military establishments was discussed with a view to effecting economies in the use of electric power.

2. The Committee was advised that A.C.C. had already taken steps to reduce its use of electricity at HQs. to a minimum, which action was appreciated by the Committee.

3. The operation of elevators in the building was also discussed, and due to the fact that the A.C.C. HQ. was eight stories high, the Committee was persuaded to allow the two elevators to operate, provided they operated from the third floor. In other words the elevators are not to go below the third floor at any time and a suitable lockout should be arranged to automatically prevent the elevators from going below the third floor.

4. The Committee advised that periodic inspection would be made to observe the use of the elevators in line with the above ruling.

5. This ruling is a concession from a standing order of R.A.A.C. that no elevators in Rome are to be operated.

6. Suitable signs should be placed on the first, second and third floors, and also in the elevators themselves, in order that those desiring to use the elevators will be fully informed.

W.M. LAPPER,
Lieut-Colonel,
Chief, U.S. 2nd Adm. Div.

SUBJECT: Electrical Data.
TO : Hqs. Region XII, attention Capt. Ryan, "South Italy Electrical Engineer".

1. Reference is made to your letter 12 July 44 file CU-662.

2. In view of the fact that it is necessary to keep a very close check on the power situation at all times, it is requested that the information be furnished at least once a week, in the future, rather than once a month as suggested in your letter.

3. We have many occasions to refer to this data and many requests from higher authorities for the current situation on power so we must, of necessity, have as recent information as possible, especially since all other areas of South Italy are kept up to date.

4. The next meeting of the Local Resources (Italian) Board Electrical Committee will be held on 14 August and it is imperative that the data be up to date as near as possible in order to give proper consideration to the allocations of power for the ensuing month.

5. In the future your official title will be "South Italy Electrical Engineer" and should be used by you hereafter.

6. A map will shortly be sent you portraying the established "control areas" for Italy which will define the territory under your jurisdiction.

W. M. LAPPER,
Lieut.Colonel,
Chief, Util. & Adm.Div.

This has been accomplished by the removal of the fuses. These fuses have been left in the custody of the building electrician.

2. In view of the difficult lightning conditions on the lower floors and the annex it is not deemed advisable by this office to remove any of their facilities. In lieu of this, it is suggested that your office issue a written direction to occupants of these floors, pointing out the importance of conserving electricity. In addition to this

Declassified E.O. 12356 Section 3.3/NND No. 785019

a representative of your office and the night duty Officer should make periodic checks.

3. As the electricity position at the present time is MOST SERIOUS it is equally important that a system of restricting the use of the elevators be instigated as early as possible.

SUBJECT: Paper Production

TO : ~~Regional Commissioner, Region IV~~
(Attn: Economics and Supply Division)

1. The paper plant of Cartiere di Subiaco has been heavily damaged, but a great deal of machinery is intact and a local reservoir of skilled workpeople exist. It is therefore proposed by this Sub-Commission in view of the shortage of paper in liberated Italy to assist the owner Sig. Cesare Crespi to rehabilitate the factory.

2. In addition to the paper making machinery there exist in this plant, and believed undamaged, following surveys by Lt. Col. Findlay and by Capt. Elliott of this Sub-Commission, power installations consisting of Turbines and Generators which are considered intact. These can deliver after about two or three months much-needed electric power for the City of Rome; this power would be available for some 9 or 10 months, as the time required for the paper plant reconstruction would appear to be about twelve months.

3. Under the circumstances mentioned above it is requested that the plant, machinery and raw materials be frozen, and that Sig. Crespi be allowed to work undisturbed on his rehabilitation program.

By Order of Capt. STONE: (USNR)

11 Jul 44

Subject: Electricity for Paper Manufacture.

To : Industry and Commerce Sub-Commission.

1. Ref. your letter 8th Jul.44, WJM/edg. regarding electricity for paper Manufacture, it is considered that there will be no difficulty in meeting this demand and we are passing it to our officer in the field who will make the necessary arrangements.

2. The question of electricity supply for the more northern areas will, however, present very difficult problems. There is at the present time electricity available in Naples and Southern Italy and by further screening of non-essential users I believe that additional energy can be found. You are requested, therefore, to do everything possible to arrange for the manufacture of goods to be carried out in Southern Italy where electricity can be made available in preference to opening-up new factories in and around Rome area where electricity is in very short supply and in fact at the present moment in a very serious position. Only factories of the very highest priority can be accepted and even then it is felt that we should ask whether arrangements could be made for the work to be done in the South.

W.M. LAPPER,
Lieut-Colonel,
Chief, Utilities & Adm. Div.

TRANSLATION

Naples II June 1944

MINISTRY OF P.W.

N°. 32 N.A.

SUBJECT : Central commission for the Limitation of consumption of electric energy.

Attention : Col. LAPPER

As you wished, I am informing you that the Central Commission for the above mentioned subject will meet in Salerno thursday the 15 th of the present month, at 10 oclock at the Ministry of P.W. building.

During the same meeting, the subject brought up in your letter N°. 060 of the 7th of June will be examined.

The President of the Commission
Chief Eng. Placido RUGGIERO

1182

ACC/060/PWU

Subject: Tramways and Filobus Salerno Province.

To : Transportation Sub-Commission.

1. Ref your letter ACC Tn/106/8 dated 12 Jun 44, concerning electricity supply to:

(a) Tramway service between Pompei and Pagano.
(b) Filobus service Pagani - S. Chiara.

2. It is confirmed that electricity can only be made available to the most essential services, and, therefore, supplies to the above cannot at the present be considered.

W.M. LAMER,
Lieut-Colonel
Chief, Utilities & Adm. Div.

1187

Copy to: Capt. Ryan, with copy of ACC Tn/106/8 dated 12 Jun 44.

TO : Public Works & Utilities Sub-Commission,
H.Q., ACC.
(attention Lt. Col. Lapper).

SUBJECT : Tramways and Filobus Salerno Province.

1. Reference telephone conversation of even date Lt. Col. Lapper and Major Mole of this Sub-Commission.

2. A further request has been received by this Sub-Commission for the resumption of :-

(a) Tramway service between Pompei and Pagano.
(b) Filobus service Pagani - S.Chiara,

3. It is stated that for (a) 2160 Kilowatts will be required daily with peak consumption between 0800 hours to 0900 hours and 1600 hours to 1700 hours (b) 700 Kilowatts daily with peak consumption between the hours stated for (a).

4. The services would undoubtedly be of benefit to the civil populace but it must be noticed that although they have been suspended since 16 Jan '44, no reports have been received by this Sub-Commission of hardships to the public likely to make use of these facilities. The chief source of complaint appears to be one of hardship to the Company, and the employees who have been "stood off" without pay.

5. It is desired to know whether the condition of the source of supply of current has been improved to such an extent to permit the above quoted daily consumption of electric power.

L.E. VINING,
Lieut-Colonel,
Director, Transportation Sub-Commission, ACC.

Subject: Electricity Rationing Decree.

To : Minister of Public Works,
att: Eng. Ruggiero.

1. Please let us know the date, time and place of the next meeting of the Central Commission of the Ministry of Public Works, which will supervise the enforcement of the Decree.

2. (a) A report should be made on the number of applications which have been received from the industrial power consumers. According to the terms of the Decree all industrial power consumers are required to make application for continuous service. Those not applying are to have the electricity disconnected.

(b) The number of such applications received should be compared with the number of such customers appearing on the companies' books.

3. A definite date should be determined by which all industrial customers should have made their applications. Ample time has been allowed those customers to make their applications.

W.M. LAPPER.
Lieut-Colonel,
Chief, Util. & Adm. Liv.

7 June 1944.

SUBJECT: Electricity.
TO : Vice President, Economic Section.
Attn: Col. Adams.

1. We have borrowed from your office the attached copy showing a graphical record of our electricity rationing results for the purpose of bringing this record up to date.

2. We have inserted an explanation of what kilowatts and kilowatt hours demands mean.

3. I wish particularly to call to your attention the fact that we have been able in many instances to hold the demand below the allocated amount either in kilowatt hours or kilowatts. There is one exception and that is in the Salerno-Torre-Castellamare section, where the Army has added numerous industries. It was first necessary to obtain an increase in the allowance for that district, but even so at certain dates we have had to exceed the allocated amount. However, as the over-all chart indicates, this has not had any appreciable effect on the over-all picture as we have been considerably under the allocations in all other Regions.

4. This represents a very considerable effort on our part and indicates that it is well under control.

5. It may be of interest to point out that the over-all charts for the S.M.E. Company for the years 1942, 1943 and 1944 indicate that while the kilowatt demands at the present time are approximately one half of what they were in 1942, and also for the present period in 1943, the kilowatt hour generation is approximately one third of what it was in 1942 and about one half of what it was in 1943.

L. A. JENNY,

SUBJECT : Naples Street Tramways

TO : Commanding General, F.B.S..
(Through H.Q. Region 3, A.C.C.)

1. Permission to reinaugurate service on certain designated sections of the Naples Street tramway system for the benefit of military organizations and the civilian population is hereby requested.

2. There are three sections of this system now ready to begin operation :

a. Section One - 1st. Priority

From Pozzuoli to the intersection of Via Nuova Bagnoli and Via Consalvo (west portal of the Posilio Tunnel) through Bagnoli and Fuorigrotta. This line serves two important ports as well as the hospital area at Fuorigrotta and the replacement center near Bagnoli. Many civilian workers can be transported by this means to the port areas, the Ilva Steel works and other important Manufacturing establishments. Congestion of the highway and street systems will thereby be lessened.
The electricity required to operate this section is estimated to be 700 kw maximum load and a consumption of 175,000 KWH per month.

b. Section Two - 2nd. Priority

From Villanova to Piazza dei Martiri by way of Via Tasso, Corso Vittorio Emanuele, Parco Margherita, Via Vittoria Colonna, Via dei Mille and Via Filangieri. A feeder line from Via Salvator Rosa, through the Vomero and Via Aniello

Falcone to Via Tasso completes the system of Section Two. This line serves the Posillipo, the Vomero and a large part of the west side of Naples City. This line would by of great benefit to the troops billeted in this area and is is of particular importance to the Hospitals in the Vomero area, as they employ many civilians. The electricity required to operate this section is estimated to be 600 kw maximum load and a consumption of 150,000 KWH per month.

c. Section Three - 3rd. Priority

From Portici through s. Giovanni a Teduccio, with feeder lines from Ponticelli, Barra, S. Giorgio and Trentola. This section serves the port area and provides transportation for many workmen employed along the waterfront. The electricity required to operate this section is estimated to be 700 kw maximum load and a consumption of 175,000 KWH per month.

3. The traffic control for Naples city has been consulted on this matter and they have no objection to the reinaugiration of Service on any of the three sections.

4. Trains to operate from 0500 to 2100 daily.
