Extracts from diary of Capt. Weeber,

Week ending 4 Mar 44.

47(1)

1. The following points seem to be specially important, and it may be advisable to bring them to the notice of Sig. Tizzano:-
 - a. Near Laurenzana, 23 miles beyond Potenza, a temporary bridge in timber put up at cost of L.200,000 destroyed by flood (day before.) Probable reason, main channel full of debris which should have been cleared by Italians at same time timber bridge erected.
 - b. Stated that 23 bridges repaired by Sig. Andreoli in Potenza Province. 40 bridges that province destroyed by Germans, most of them now passable. Capt. Weeber understood that 4,000 contractors' men still engaged on bridge repair jobs but ~~W.M.~~ further discussion later in the week left doubt in Capt. Weeber's mind as to whether the figure is not only about 100.
 - c. Conference with Capo Ing. Crocetta (Strade Statali, Matera Province) indicated no plans or profiles of state highways available, nor ever prepared. Did not even know how many bridges and culverts exist between Salerno and Potenza. Proper survey maps for record purposes do not exist except that there are profiles in handbook of "Touring Club Italiano". State roads in Salerno Province are 251 miles, Potenza Province 462 miles, and Matera Province 174 miles; total 887 miles. Crocetta's technical staff much too small in view of the amount of work ahead. Urgent need of better maintenance road Potenza to Salerno, particularly very bad 3 mile stretch E. of Auletta. (A.A.S.S. never had any plant at all, even minor repairs being done through contractors).
 - d. Conference on 2 Mar. 44 with Ing. Greuso, Major Hyland being present, outlined urgent priorities as follows:-

In Capt. Weeber's area,
Salerno to Battipaglia.
Road S. from Battipaglia.
Bridge repair over River Sele. - Route?
Reconstruct two bridges E. of Eboli.
New bridge design wanted for Auletta to replace Bailey bridge.
Get other Baileys out as soon as possible. 4367
Heavy repair works between Gravino and Tolve.
Spezzano to Taranto, surfacing and ditches.
Resurface bomb craters and strengthen maintenance gangs on other main highways.

- 2 -

Capt. Weeber extremely doubtful if Italians able to carry out even above modest programme. Few engineers, no plant and equipment except some with a few contractors, and transport nil.

Capt. Weeber suggests four alternatives, (refer to page 4). Probably combination of four best solution.

e. Discussion with Sig. Abenante, Head of Potenza Province, disappointing. Had no organisation chart available and hardly knew names of his own engineers directly under him in the three Provinces. Chart drawn up with him and checked. Names of Italian engineers in Salerno Province Capt. Weeber would have to get himself, (refer to blank on chart). Sig. Abenante had not a list of contracts now in hand nor ~~W.M.~~ his control officer for highways, a Sig. Luonge. List of contracts was promised for the following week. Capt. Weeber left wondering what the "Ispettorato Genio Civile" are doing if they do not have even basic records of work under their jurisdiction.

2. SUMMARY (from above).

<u>Damaged Bridges.</u>	<u>No.</u>	<u>Remarks.</u>
1. Laurenzana new temporary timber bridge washed out; old masonry one destroyed by enemy.	1	Debris in stream to be removed.
2. R/R. bridge close by.	1	Reps in hand.
3. In Potenza Province. (No figures yet available for Matera and Salerno Provinces.)	40	23 repaired.
4. Near Irsina, 90' single-arch bridge; (Bailey bridge now taking traffic).	1	Repairs may be complete by 31 Mar.
5. E. of Stateline; Bailey Bridge.) Just outside) Capt.	1	By-pass in hand R.E. supervision.
6. Near Grevino; Bailey Bridge.) Weeber's) area.	1	Bailey Edge being removed (R.E.).
7. S. of Auletta, and S. of Casalbuono	2	
8. <u>Immediate programme:-</u>	<u>47</u>	
1 bridge over River Sele.) To get other 2 bridges E. of Eboli.) Bailey Bridges 1 bridge Auletta.) out.		4366

File Ref:

Date: 8, June 1944

SUBJECT: Reconstruction of arches and piers for the railroad bridge over the Torrente Petrace.
TO: Director, Public Works and Utilities Subcommission
HQ. A.C.C.

1. I am forwarding herewith the plan and estimate for the construction of arches and piers for the railroad bridge over the Torrente Petrace, Province of Reggio, Calabria. This bridge is the one remaining link in the standard gauge line from Reggio to Naples that has not been either permanently or temporarily repaired and its completion will restore through traffic on this railroad line thus opening a vital means of communication for this region. This will eliminate the use of a mountain railroad whose gross tonnage is limited in certain stretches to 100 tons for the transportation of supplies from the ports of Crotone and Reggio to any point north Gioia Tauro on the western side of the coast.

2. You will note that the contract for this work was let on 6, April, 1944 and the contractor is already working on the project.

On my last trip to Reggio I noted that progress was being made on this work,

3. Inasmuch as this bridge is a railroad bridge, designed, estimated, and the contract let by the Chief of the Compartiment of the state railroads under the administration of the Minister of Communications, I am not accomplishing the usual PWU/EST forms but am forwarding this project to you to turn over to the appropriate subcommission for approval.

2 June 1944.

SUBJECT: Railroad Bridge over River Petrace (south of Gioia-Tauvo)
TO : Vice-President, Economic Section.

1. Recently the Director of the Italian State Railroads at Reggio Calabria asked our engineer in charge of highway and bridge reconstruction in that Region whether we could do something to help him get the railroad bridge over the Petrace River reconstructed. He stated that if that bridge were rebuilt, they would then have a continuous railroad line from Reggio to Naples.

2. Our engineer looked into the project and we are advised that it is a task of considerable proportions and will take several months to rebuild. He also advised the Director of the State Railroads that before anything could be done, the railroad organization would have to prepare a plan and estimate of cost.

3. As this is a railroad problem, the matter should be referred to the Transportation Sub-Commission to ascertain whether or not this bridge should be rebuilt within the near future. Will you, therefore, refer this matter to the Transportation Sub-Commission for investigation and advice.

4. If desired, the work of reconstruction of this bridge could be handled by this Sub-Commission in connection with our military highway and bridge reconstruction program in Calabria.

L. A. JENNY,
Lt. Col., C.E.,
Director.

4362

Allied Force
MILITARY RAILWAY SERVICE
Office of Director General

APO 400
16 February 1944

SUBJECT: Reconstruction of Railway Bridge near Lauria

TO : Lt. Col. L. A. Jenny, C.E., Director of Public Works &
Utilities Sub-Commission, APO 394.

1. Attaching hereto one copy of map "Railways of Northern Italy",
dated this Headquarters 20 October 1943, one copy of map "Railways of
Southern Italy", dated this Headquarters 18 October 1943.

2. On this latter map have indicated:-

(a) In solid red color lines of military value, and
which are open to service.

(b) In dashed red color lines of military value which
are under repair.

(c) All rail lines in the occupied area not colored, are
lines, which for the present, are considered to have no
military value. In the case of standard gage railroads, the
uncolored lines are not serviceable. In the case of narrow
gage lines, the lines not colored may or may not be ser-
viceable.

3. The narrow gage line Logonegro to Spezzano has no military
value.

4. If this line is to be repaired, it should be handled by the
appropriate Sub-Commission of the A.C.C. If it is operated, it will not
be operated under the supervision of this Headquarters.

5. This Headquarters is interested in the repairs and operation of
the line in question on one basis only, and that is whether the reconstruct-
ion and operation of this line will necessitate the use of vital railway
materials which are needed for the rehabilitation and operation of lines
of military necessity. It will, therefore, be necessary before this work
is undertaken thru A.C.C. Agencies, that this Headquarters be advised:-

436:

(a) As to the total amount of repairs necessary to
place the line in operation.

(b) Materials required for such work, and where it is expected to obtain such materials.

(c) The type and estimated amount of train service which will be used in connection with operation of the line, for the use of this Headquarters in determining the probable amount of railway supplies needed for the continued operation.

HEADQUARTERS
ALLIED MILITARY GOVERNMENT
PUBLIC WORKS & MINES SUBCOMMISSION
Mining DivisionIn reply
refer to:
679.131

11 January 1944

SUBJECT: Repair of Railway Bridge at Lauria.

TO : Director, Public Works & Mines Subcommission, AMG.

1. In order to relieve the present fuel shortage and to expedite the reopening of the lignite mines at Castellucio, it is requested that steps be taken to obtain the necessary approvals for the reconstruction of a railway bridge at Lauria in the Province of Potenza and that work be initiated on this project as soon as possible.

2. The largest producer of lignite in that portion of Italy now occupied by the Allies is at Castellucio. The production at this mine, called the "Mercure" mine and operated by Lignite Italiana Meridionale S. A. (L.I.M.S.A.), averaged 2,925 tons for the first seven months of 1943. The average for all mines in the occupied area (a total of fifteen) was 5,811 tons. The maximum production of the Mercure mine was 3,914 tons, as compared to the maximum productions of the next two largest mines, which was 1,021 tons at Briatico and 997 tons at Morcone.

3. At present there are 15,000 tons of lignite at Castellucio ready for shipment.

4. The mine is ready to operate, and all equipment and supplies are on hand with the exception of carbide for lamps. The primary obstacle to reopening the mine is transportation. Most of the market and present requirements for lignite are to the north of Castellucio. Lignite was formerly loaded into railway cars of nine-ton capacity on a narrow gage rail line which connected with standard gage track at Spezzano to the south and Lagonegro to the north. There are hopper facilities at the mine for loading about eight cars.

5. The rail line is now operating from Spezzano to Lauria, where the bridge has been destroyed, making transportation to Lagonegro and points north by rail impossible. Lauria is sixteen kilometers from Castellucio, and is the same distance from Lagonegro. There are two arches of the bridge destroyed over a span of about sixty feet. The height of the arches is approximately eighty feet.

6. The following figures on the rolling stock of the narrow gage line were obtained from the station master at Castellucio. It is possible that they may not be accurate.

Number of gondolas between Castellucio and Spezzano	- 20
Number of gondolas between Lauria and Lagonegro	- 10
Locomotives south of break	- 2
Locomotives north of break	- 1

7. Until the bridge is repaired it will be necessary to haul the lignite from Castellucio to Lagonegro by truck. This practice is not economical. The reconstruction of the bridge will also open another north-south rail route, as trains are now running to Lagonegro from the north and from Spezzano to the south and east, making connections with all the principal operating lines.

8. It is therefore requested that every possible effort be made to initiate work on the reconstruction of the railway bridge at Lauria.

For the Chief, Mining Division:

CARROLL S. CARTER,
Lieutenant Colonel, C. E.,
Executive Officer, Mining Division.

HEADQUARTERS
ALLIED MILITARY GOVERNMENT
REGION II

7 Jan 44

Ref: RGA/56/25

Subject: Reconstruction R.R. Bridge at Lauria.

To : RGAO, Region II

1. I have discussed with the engineers of the Ferrovie Calabro Ligure their two plans for repairing the RR bridge at Lauria, and I have been to Lauria and inspected the damaged bridge.
2. Damage to this bridge was caused by the Germans blowing up the center pier (about 80 ft high) causing the collapse of the two arches resting thereon (each arch 60 ft diam)
3. The bridge may be repaired to its original condition or as an alternate plan the tracks may be relocated from a point within the tunnel which adjoins the bridge. This relocation would carry the tracks on a shelf cut in the side of the canyon to a point where a new bridge shorter and lower than the existing one would span this canyon and connect with the present grade.
4. In the opinion of the R.R. Engineers this alternate plan would cost fifteen percent less and might be completed in three months instead of four. It has the following disadvantages however,
 - (a) Will require two curves each of 250 ft radius (minimum radius for satisfactory operation is 325 ft)
 - (b) Canyon wall is of shale and subject to frequent slides which would intercept service and be a continuing item of expense.
5. The break in this bridge prevents operation of the only railroad facilities serving the interior part of Italy between Sicignano and Spezzano. The road is needed to ship grain south from the Potenza area and to ship lignite north from Castelluccio to Potenza and Naples.
6. I recommend that this bridge be repaired to its original condition at an approximate cost of 1,000,000 lire. Work to be done by contract let to the low bidder. Attached exhibit gives pertinent information.

RECONSTRUCTION LAUMIA RAILROAD BRIDGE: PERMANENT INFORMATION

- A. Bridge is on a principal Railroad.
- B. Railroad is badly needed to haul important materials both in and out of Area.
- C. Bridge will be reconstructed of stone quarried nearby.
- D. Other Materials needed:
 - Cement 1400 quintals
 - Lumber 100 Cu Meters
 - Reinforcing steel 7 quintals
 - Petrol 15 quintals.
- E. Materials other than stone can be brought to the site by railroad.
- F. Contractor will supply motor transport.
- G. It will take 120 to 150 working days to complete job.
- H. I have viewed the project and concur with the engineers of the Ferrovie Calabro Lucane that the bridge should be reconstructed instead of the alternate plan for relocating the track as explained in my letter.

Ref your: ECA/56/32

SUBJECT: Reconstruction Lauria Bridge

TO : Public Works and Mines Sub-Commission (Att: Lt. Col. G. E. Rhodes)

1. The scales of wages for Region II apply only to civilians employed by the Armed Forces, either directly or through contractors, and not to civil contracts. Hence, the official scale of wages for Region II cannot be binding in the case of the bids in question.

2. Since these bids apply to a civil contract, the following policy and procedure governs:

a. Contractors for civil public works cannot pay a wage which exceeds the basic wage set in collective contracts, and frozen as of September, 1943, and as revised by Regional Order No. 6, 7 December, 1943, which permits a maximum upward revision of wages of 70% of the basic wage.

b. Since basic wages were set originally by collective contracts, and since these collective contracts vary from locality to locality, it will be necessary for your local representative to make final determination in the locality, in cooperation with our representative, who is Capt. Robert Frazer, Labor Officer, Matera.

3. This office has discussed this matter with Capt. Frazer, who had previously worked on the problem. He indicated that all the bids appeared too high in the light of 2 (a) above, and that a satisfactory wage structure had been worked out in the field office. He is ready, however, to confer further with your representative concerning the matter.

4. The copies of the bids from the three construction firms for re-building the Lauria Bridge are attached.

J. T. R. BAIN,
Colonel,
Director, Labor Sub-Commission.

Subject: Re Construction Lauria Bridge

To : HQ AMG Public Works & Utilities Sub-Comm. Naples

1. I am attaching copies of bids from three construction firms for rebuilding the Lauria Bridge. These bids were requested and received by the Ferrovie Calabro Lucane and are the basis for the Railroads revised estimate of L 1,300,000 for completing the job.

2. I would like to call your attention to the fact that under paragraph 20 the scale of wages proposed by all three contractors is much higher than the official scale of wages for Region II. I am attaching a schedule comparing the Mar 25 1944 scale with the present official scale and those proposed by the three contractors.

3. I have instructed the railroad that no bids are to be accepted without our permission.

T.O. (Rail)

Note:

Mining Division asks for this bridge so as to move
lignite to the north.

Region II asks for it to move grain south.

In esito alla stim/ V/ del 7 c.m. n.LM/00084/703 mi prego
rimettere offerta per i lavori di ricostruzione dei 2 archi di m.18 e
della pila centrale del viadotto alla pr.16.273,02 della linea Lagonegro
Spezzano Alb.= Distinti saluti. CAMELE GIUSEPPE

- 1° - Demolizione di muratura di pietrame in malta e di calcestruzzo sia per demolizione di muri che per formazione di ammorsature delle nuove murature compreso la pulizia e l'accatastamento del materiale riutilizzabile ed il trasporto a rifiuto di quello inutilizzabile su aree da provvedere a cura e spese della sottoscritta Impresa al mc.l. 75,00
- 2° - Calcestruzzo in fondazione a Kg.150 di cemento tipo 500 per mc. 0.800 di pietrisco e mc.0.500 di sabbia : al mc.l. 850,00
- 3° - Calcestruzzo a Kg.200 di cemento tipo 500 c.s. al mc.l. 950,00
- 4° - Calcestruzzo per pietra artificiale per coronamento, cuscinetti, ecc. composto di Kg.300 di cemento tipo 500, mc.0.850 di ghiesetto avente assortimento fino a m/m.30, mc.0.500 di sabbia al mc.l. 1570,00
- 5° - Calcestruzzo per volto a Kg.250 di cemento tipo 500, mc.0.850 di pietrisco e mc.0.500 di sabbia : al mc.l. 1400,00
- 6° - Sovrapprezzo al n.5 per conglomerato da gettarsi in opera per formazione di volti e conci da sfalsarsi secondo le prescrizioni della dirigenza dei lavori comprese le paratie in legno occorrenti : al mc.l. 180,00
- 7° - Muratura di pietrame con malta a Kg.300 di cemento tipo 500 per mc.0.500 di sabbia : al mc.l. 805,00
4379
- 8° - Compenso per la lavorazione della faccia vista con paramento a corsi regolari delle murature di pietrame in malta, lavorato analogamente a quelli esistenti, in bolognini di pietra calcarea compresa la stilatura dei giunti : al mq.l. 135,00

= 2 =

- 9° - Compenso sovraprezzo per la lavorazione a spigolo vivo tirato allo scalpello dei cantonali che saranno lavorati similmente a quelli esistenti ; detto sovrapprezzo va contabilizzato in aggiunta ai prezzi nn.7 e 8; al m.L. 110,00
- 10° - Riempimento sull'estradosso dei volti con pietrame a sec-
co, compreso uno strato non inferiore a cm.20 da formarsi con sabbia sulla cappa dei volti : al m.L. 220,00
- 11° - Intonaco per cappa sull'estradosso dei volti dello spes-
sore di cm.10 da formarsi con conglomerato cementizio a Kg.550 di cemento con successivo strato d'intonaco li-
sciato di spessore non inferiore a cm.1 formato con malta a Kg.800 di cemento : al mq.L. 245,00
- 12° - Centinatura di volti di qualsiasi struttura di luce m.18
costituita da centine e manto continuo compresa la chioderia,
bulloni, staffe ed impalcature per il montaggio mis-
surata sullo sviluppo : al m.L. 1100,00
- 13° - Compenso a corpo per la costruzione di passerelle e pon-
ti di servizio occorrenti per l'esecuzione dell'opera e
successiva rimozione ad opera finita : - a corpo L. 52.000,-
- 14° - Carro a cassa, ad un cavallo o mulo della capacità non
inferiore a m.c.0.600 ed esclusa la prestazione del con-
ducente da compensarsi a parte col prezzo n.20/3 e con
l'obbligo di lavorare al carico e scarico : giornata
di 8 ore L. 150,00
- 15° - Carro a cassa a due cavalli, della capacità non inferio-
re a m.c.1.00 il resto come al n.14 - giornata di 8 ore L. 200,00
- 16° - Noleggio di legname di qualsiasi essenza, sia in travi
che in tavole di qualsiasi sezione e lunghezza, nuove
o usate, purchè accette alla dirigenza dei lavori per
tutta la durata dell'impiego : al m.c.L. 950,00
- 17° - Noleggio di ferramenta di qualsiasi specie per tutta
la durata dell'impiego : al Kg.L. 8,00
- 18° - Materiale fornito a più d'opera :
 a) Cemento idraulico normale Portland : al qte L.160,00
 b) Sabbia calcarea dura di torrente o franticio : al m.c.L. 155,00
 c) Pietrame calcareo per riepimento, vespaie, dimas-
zature : al m.c.L. 125,00
 d) Pietrame calcareo scelto per murature : al Kg.L. 190,00
 e) Pietrisco o ghiaia calcarea dura per conglomerato
cementizio con assortimento omogeneo di ghiaia da
m/m.7 a m/m. 30 : 4348 al m.c.L. 210,00
 f) Pietrisco per massicciata e per inghiaiamento : al m.c.L. 130,00

* 3 *

19° - Legname di qualsiasi essenza :

- a) in travi di qualsiasi essenza e lunghezza : al mc.L. 3580,00
- b) in tavole e murali ecc. c.s. al mc.L. 4600,00

20° - Prestazioni di mano d'opera :

a) Muratore :	ad ora effettiva di lavoro	L.	18,00
b) Scalpellino, carpentiere, ferragiuolo, attrezziatore	c.s.	L.	18,00
c) Cavamonte	"	L.	12,00
d) Manovale	"	L.	11,00
e) Terrazziere	"	L.	11,00
f) Terrazzo Garzone dai 16 ai 18 anni:	"	L.	7,00
g) Raffazza fino ai 16 anni :	"	L.	6,00
h) Meccanico :	"	L.	18,00
i) Guardiano :	"	L.	9,00

21° - Aumento percentuale dei prezzi della mano d'opera delle voci di cui al numero precedente per lavoro straordinario :

- a) per la prima ora fino al limite settimanale di otto ore 15%
- b) per le ore eccedenti il limite suddetto 25%
- c) per lavoro festivo : 25%
- d) per lavoro notturno : 50%

I lavori saranno ultimati in n°120 giornate lavorative.

N.B. Qualora il prezzo del cemento idraulico normale Portland cui n.18 subisce delle variazioni di prezzo, in aumento o diminuzione, i prezzi^a inerenti gli articoli 2°) - 3° - 4° - 5° - 7° - 8° - 11° saranno variati in aumento o in diminuzione.

In riscontro alla Vs. gradita richiesta del 7 gennaio 1944 n. CO083/703, relativa alla ricostruzione del viadotto di Lauria, demolito in parte per azioni belliche, mi prego qui di seguito elencarVi i prezzi unitari ed a corpo, in base ai quali sarei disposto ad eseguire i lavori.

Vi spiego che i prezzi sono stati calcolati tenendo presente un costo di cemento a più d'opera di L. 150.= : subendo tale costo delle variazioni in più o in meno, resta inteso che i prezzi della categoria di lavori dipendenti da tale materiale dovrebbero subire variazioni proporzionate.

-
- 1° - Demolizione di muratura di pietrame in malta e di calcestruzzo sia per demolizione di muri che per formazione di ammorsature delle nuove murature compreso la pulizia e l'accatastamento del materiale riutilizzabile ed il trasporto a rifiuto di quello inutilizzabile su aree da provvedersi a cura e spese della sottoscritta Impresa al mc.L. 70,00
- 2° - Calcestruzzo in fondazione a Kg.150 di cemento tipo 500 per mc. 0.800 di pietrisco e mc.0.500 di sabbia : al mc.L.825,00
- 3° - Calcestruzzo a Kg.200 di cemento tipo 500 c.s. al mc.L.900,00
- 4° - Calcestruzzo per pietra artificiale per coronamento, cuscinetti, ecc. composto di Kg.300 di cemento tipo 500, mc.0.850 di ghiaietto avente assortimento fino a m/m.30, mc.0.500 di sabbia al mc.L.1500,00
- 5° - Calcestruzzo per volto a Kg.250 di cemento tipo 500, mc.0.850 di pietrisco e mc.0.500 di sabbia : al mc.L.1350,00
- 6° - Sovrapprezzo al n.5 per conglomerato da gettarsi in opera per formazione di volti a conci da sfalsarsi secondo le prescrizioni della dirigenza dei lavori comprese le paratie in legno occorrenti : al mc.L. 200,00
- 7° - Muratura di pietrame con malta a Kg.300 di cemento tipo 500 per mc. di sabbia : al mc.L. 750,00
- 8° - Compenso per la lavorazione della faccia vista con paramento a corsi regolari delle murature di pietrame in malta, lavorato analogamente a quelli esistenti, in bolognini di pietra calcarea compresa la stilatura dei giunti : al ^{mc.L.} 150,00
4347

= 2 =

- 9° - Compenso sovrapprezzo per la lavorazione a spigolo vivo tirato allo scalpello dei cantonali che saranno lavorati similmente a quelli esistenti : detto sovrapprezzo va contabilizzato in aggiunta ai prezzi nn.7 e 8: al ml.L. 100,00
- 10° - Riempimento sull'estradosso dei volti con pietrame a secco, compreso uno strato non inferiore a cm.20 da formarsi con sabbia sulla cappa dei volti : al mc.L. 225,00
- 11° - Intonaco per cappa sull'estradosso dei volti dello spessore di cm.10 da formarsi con conglomerato cementizio a Kg.550 di cemento con successivo strato d'intonaco lasciato di spessore non inferiore a cm.1 formato con malta a Kg.800 di cemento : al mq.L. 235,00
- 12° - Centinatura di volti di qualsiasi struttura di luce m.18 costituita da centine e manto continuo compresa la chioderia, bulloni, staffe ed impalcature per il montaggio misurata sullo sviluppo : al mc.L. 1000,00
- 13° - Compenso a corpo per la costruzione di passerelle e ponti di servizio occorrenti per l'esecuzione dell'opera e successiva rimozione ad opera finita : - a corpo L.50.000,-
- 14° - Carro a cassa, ad un cavallo o mulo della capacità non inferiore a mc.0.600 ed esclusa la prestazione del conducente da compensarsi a parte col prezzo n.20/d e con l'obbligo di lavorare al carico e scarico : giornata di 8 ore L. 35,00
- 15° - Carro a cassa a due cavalli, della capacità non inferiore a mc.1.00 il resto come al n.14 - giornata di 8 ore; L. 50,00
- 16° - Noleggio di legname di qualsiasi essenza, sia in travi che in tavole di qualsiasi sezione e lunghezza, nuove o usate, purchè accette alla dirigenza dei lavori per tutta la durata dell'impiego : al mc.L. 1000,00
- 17° - Noleggio di ferramenta di qualsiasi specie per tutta la durata dell'impiego : al Kg.L. 7,50
- 18° - Materiale fornito a piè d'opera :
- a) Cemento idraulico normale Portland : al qle L. 150,00
 - b) Sabbia calcarea dura di torrente o frantocio al mc.L. 150,00
 - c) Pietrame calcareo per riempimento, vespa, dimazature : al mc.L. 80,00
 - d) Pietrame calcareo scelto per murature : al mc.L. 120,00
 - e) Pietrisco o ghiaia calcarea dura per conglomerato cementizio con assortimento omogeneo di ghiaia da m/m.7 a m/m. 30 : al mc.L. 200,00
 - f) Pietrisco per massicciata e per inghiasciamento al mq.L. 140,00

./.

- 3 -

- 19° - Legname di qualsiasi essenza :
a) in travi di qualsiasi essenza e lunghezza : al mc.L. 3500,00
b) in tavole e murali ecc. c.s. al mc.L. 4500,00
- 20° - Prestazioni di mano d'opera : L. 16,50
a) Muratore : ~~numm~~ ad ora effettiva di lavoro
b) Scalpellino, carpentiere, ferra ~~lavorante~~
iuolo, attorzatore c.s.
c) Cavamonte ~~quarry man~~" L. 16,50
d) Manovale ~~laborer~~" L. 13,50
e) Terrazziere ~~slab man~~" L. 10,00
f) ~~Terrazz.~~ Garzone dai 16 ai 18 anni:" L. 10,00
g) Ragazzo fino ai 16 anni :" L. 8,--
h) Meccanico :" L. 7,--
i) Guardiano :" L. 20,00
j) " :" L. 10,00
- 21° - Aumento percentuale dei prezzi della mano d'opera delle voci di cui al numero precedente per lavoro straordinario :
a) per la prima ora fino al limite settimanale di otto ore 15%
b) per le ore eccedenti il limite suddetto 25%
c) per lavoro festivo : 25%
d) per lavoro notturno : 50%
- I lavori saranno ultimati in n°120 giornate lavorative.

Lauria Superiore, 1° 14 Gennaio 1944

Potenza Lauria Sup.

SPETT/111 FERROVIE CALABRO-LUCANE
Gruppo EsercizioB A R I

Replying to your request Jan 7, relating to the reconstruction of LARIA BRIDGE, partly demolished as result of war actions, I send you the prices per unity and in bulk ~~as~~ which I am ready to execute.

I wish to explain, such prices are based on the cement cost of L. 150 (per quintal?) on the place work. Should these prices varies on way or the other prices of works to use cement will vary according.

1. Demolition of stone masonry and conglomerate concrete, to demolish walling to form pinch of the new walling including the deposit and the removal of scums and the materials which cannot be salvageable. All such operations at our expenses. Cu.M.L. 70.00
2. Concrete in foundation with Kg.150 of cement (type 500) for each Cu.M. 0.800 of crushed stone and Cu.M. 0.500 of sand. " " 825.00
3. Concrete with Kg.200 of cement (type 500) as above. " " 900.00
4. Concrete for artificial stone for shoulders and finishing works on the bridge, composed with Kg.300 of cement (type 500), Cu.M. 0.850 of small gravel having size up mil/mil.30, Cu.M. 0.500 of sand. " " 1500.00

I wish to explain, such prices are based on the cement cost of L. 150 (per kuintal?) on the place work. Should these prices varies on way or the other prices of works to use cement will vary according.

1. Demolition of stone masonry and conglomerate concrete, to demolish walling to form pinch of the new walling including the deposit and the removal of scums and the materials which cannot be salvageable. All such operations at our expenses. Cu.M.L. 70.00
 2. Concrete in foundation with Kg.150 of cement (type 500) for each Cu.M. 0.800 of crushed stone and Cu.M.0.500 of sand. " " 825.00
 3. Concrete with Kg.200 of cement (type 500) as above. @ " 900.00
 4. Concrete for artificial stone for shoulders and finishing works on the bridge, composed with Kg.300 of cement (type 500), Cu.M.0.850 of small gravel having size up mill.30, Cu.M.0.500 # sand. " " 1500.00
 5. Concrete for arch with Kg.250 of cement (type 500), Cu.M.0.850 of crushed stone and Cu.M.0.500 of sand. " " 1350.00
 6. Special extra price as for N.5 for conglomerate to be placed to form the arches as per specifications of supervisor including the timber to make the form. " " 200.00
 7. Stone masonry with conglomerate with Kg.300 of cement (type 500) per Cu.M. of sand " " 750.00
- 4339

8. Compensation for working of the arch with regular course of the stone masonry of conglomerate, and the finishing of the structure as it was before. Sq.M.I. 150.00
9. Special extra price compensation for stone work and bridge, stone fences similar to those ready exciting such special extra price will be charged in addition to prices as N.7 - 8 mil." 100.00
10. Fillings the shoulders of the arches with dry crushed stones including a thickness of at least 20 cm. with sand. Cu.M. " 225.00
11. Plaster on the shoulder of the arches of the thickness of at least 10 cm. formed with cement conglomerate contained Kg.550 of cement and with a top successive strata containing Kg.800 of cement. Sq.M. " 235.00
12. Preparation of arches of 18m. including neals bolts and all the necessary equipment for its assembling. Cu.M. " 1000.00
13. Compensation at flat price for the construction of scaffolds and service bridge necessary for the construction and the removal after the completion. " " " 500.00
14. Horse or mule carts of capacity at least Cu.M.0.600 not including (the wage) the wage of the driver to be paid separately as price N.20/d for 8 hours working a day. " " " 35.00

10. Fillings the shoulders of the arches with dry crushed stones including a thickness of at least 20 cm. with sand.

Cu.M. " 225.00

11. Plaster on the shoulder of the arches of the thickness of at least 10 cm. formed with cement con glomerate contained Kg.550 of cement and with a top successive strate containing Kg.800 of cement. Sq.M. " 235.00
12. Preparation of arches of 18m.including neals bolts and all the necessary equipment for its assembling. Cu.M. " 1000.00
13. Compensation at flat price for the construction of scaffords and service bridge necessary for the construction and the removal after the completion. " " " 500.00
14. Horse or mule carts of capacity at least Cu.M.O.600 not including the wage of the driver to be paid separately as price N.20/d for 8 hours working a day.
15. 2 horse carts with capacity at least of Cu.M.I.00 the rest as N.14, 8 hours working a day " 50.00
16. Rent of timber of various type, in beams or tables of various type and lenght, new or used, provided acceptable to the direction of works for all the duration of works. Cu.M1000.00
17. Rent all steel equipment for all the duration of works $\frac{4}{3}3\frac{3}{8}$ Kg. \$•50
18. Material supplied on place
a) ~~Horse and mule carts~~ ~~and equipment~~

- 18.) Hydraulic mortar; Portland cement £0. each q.l. 150.00
 b) Calcareous hard sand of torrent or crushing machine Cu.M." 150.00
 c) Calcareous stone for filling etc. " " " 80.00
 d) Calcareous stone for masonry " " " 120.00
 e) Flint stone or calcareous gravel for cement conglomerate homogenous sizes from " " " 200.00
 mil.7 to mil.30 " " " 140.00
19. Wood of various types :
 a)beams of various type and quality " " " 3500.00
 b)tables etc. as above " " " 4500.00
20. Labor with 16.50
 a)Bricklayer " 16.50
 b)Stone worker, blacksmith, carpenter " 13.50
 c)Quarry man " 10.00
 d)Labourer " 10.00
 e)Shovel man " 8.00
 f)Boy from 16 to 18 years " 7.00
 g)Boy under 16 years " 20.00
 h)Mechanic " 10.00
21. Watchman ~~for extra & extra work~~
 Percentages of wages increase for over time as precedent number
 a)for the 1st hour up to 8 hours per week 15%
 b)for hours exceeding above limit 25%
 c)for working during holydays 25%

19. Wood of various types :

- a)beams of various type and quality " " " 3500.00
- b)tables etc. as above " " " 4500.00

20. Labor

- a)Bricklayer with 16.50
- b)Stone worker, blacksmith, carpenter " 16.50

TO : - HQ. A.C.C., APO 394
Public Works & Utilities Sub-Commission

1. Your ACC/072/PWU of 21 Apr. 44 refers.
2. The speedy repair of the Lauria Bridge is regarded as being of great importance from the civil standpoint for the following reasons:-
 - (a) It will open up the line from Spezzano Albanese to the North.
 - (b) At CASTELLUCIO INFERIORE is situated the most important lignite mine in Southern Italy. This mine is at present not working, as it has an accumulation of 15,000 tons of soft coal already mined which cannot be distributed.
 - (c) The normal consumption areas for this coal are Potenza, Salerno and Naples. These cannot be supplied by rail except by sending the coal south to Spezzano Albanese, where it has to be transferred to the I.S.R., and routed via Sibari and Metaponto, which makes a long and costly haul. Naples is in serious need both of coal and also of charcoal, which is produced in the Sila and normally hauled by this line.
 - (d) The coal is urgently needed to meet civil requirements for household fuel, for cement works, bakeries, brick and tile works, and numerous other industries which play a vital part in the rehabilitation of civil life in Southern Italy. ⁴³³
 - (e) The reopening of the mine will afford work for some 1,000 operatives, which in itself will be of great value to Potenza Province, where they are having to receive relief.
 - (f) The reopening of the railway will assist materially in the speedy and economical distribution of foodstuffs railed from Naples. At present supplies can only go by rail to Lagonegro, from which point they have to be distributed by the much more costly method of road transport. Moreover both vehicles and spares of all kinds are almost non-existent.

MEMORANDUM Re- Trip to Bari for Conference
with Brig. Dixon.

The conference with Brig. Dixon resulted in no change in our situation with respect to the Military Highway Program except to impose upon us the task of developing what and how much equipment we will need from N°2 District by months by jobs.

We pointed out that transport was badly needed and that we could proceed with speed on the contemplated program if we received the 25 trucks (3 ton) Maj. Knight had requested of Brig. Dixon a week or more before.

We presented a typed copy of each of 2 pages showing the Time Schedule and Materials and Equipment required for the entire program for N°2 District.

Brig. Dixon assured us we would receive our full allotment of bitumen starting with May requirements. 7500 tons of bitumen are coming in monthly from the USA, of which 2000 tons will be allocated to us by N°2 District. This would give us sufficient bitumen to complete the program before October.

Assurance was given that stone would be no problem except for price. Only one good hard stone quarry is available in the area between Brindisi and Foggia and that one is located at Brindisi. The soft stone quarries are numerous but not suitable. All stone for our program in this area must come from Brindisi. To conserve Army transport, it is necessary to utilize rail trucks as much as possible and then to make short hauls from the rail trucks to the jobs with Army transport.

The price of stone for the ACC job has been boosted considerably above the normal price paid by the Districts for the same stone and Brig. Dixon is intending to have a study made of this problem with a view to reducing the level to that of the Army prices. This division is of the opinion that stone prices are something which an accounting Sub-Commission or more properly the Italian Govt. who ultimately foot the bill should look into and that this question is not one for a supervising engineering sub-commission to devote its already limited time to.

Brig. Dixon complained of the lack of cooperation on the part of the Italian Govt. Engineer Officials and proposed that a wholesale sacking should take place to correct this condition. Finally, he suggested that this sub-commission should study the matter of salaries and wages of both Engineers and Cantonieri with a view to

file

proposing an increase which would be more in keeping with the times and thus to bring about a more active and satisfactory cooperation and performance.

Maj.Hyland is to prepare the list of materials and equipment requested.

SUBJECT: Reconstruction of Railway Bridge, at Lauria, Potenza Province.

TO : Transportation Sub-Commission, A.C.C.
(Att: Major Mole).

1. Reference Major Mole's telephonic request to this Sub-Commission on 21 April, concerning the above bridge, narrow gauge railway, the matter has now been further gone into with the Regional Commissioner, Region II. Major Mole stated that if reasons could be advanced for the reconstruction of the bridge, as from a civil supply standpoint, the sanctioning of the project might be reconsidered.

2. I attach herewith a copy of Regional Commissioner's letter, Region II, No. RGA/2070/2, dated 27 April, from which you will observe that six specific reasons are advanced in support of the scheme. If there is any additional assistance that this Sub-Commission can afford, kindly let us know.

2. The speedy repair of the Lauria Bridge is regarded as being of great importance from the civil standpoint for the following reasons:-
 - (a) It will open up the line from Spizzano Albanese to the North.
 - (b) At CASTELLNUOVO IN CAMPORE is situated the most important lignite mine in Southern Italy. This mine is at present not working, as it has an accumulation of 15,000 tons of soft coal already mined which cannot be distributed.
 - (c) The normal consumption areas for this coal are Potenza, Salerno and Naples. These cannot be supplied by rail except by sending the coal south to Spizzano Albanese, where it has to be transferred to the I.S.R., and routed via Sibari and Pietraponto, which makes a long and costly haul. Naples is in serious need both of coal and also of charcoal, which is produced in the Sila and normally hauled by this line.
 - (d) The coal is urgently needed to meet civil requirements for household fuel, for cement works, bakeries, brick and tile works, and numerous other industries which play a vital part in the rehabilitation of civil life in Southern Italy.
 - (e) The reopening of the mine will afford work for some 1,000 operatives, which in itself will be of great value to Potenza Province, where they are having to receive relief.
 - (f) The reopening of the railway will assist materially in the speedy and economical distribution of foodstuffs railed from Naples. At present supplies can only go by rail to Lagonegro, from which point they have to be distributed by the much more costly method of road transport. Moreover both vehicles and spares of all kinds are almost non-existent.

Subject:- Transport for Reconstruction and Maintenance in No. 2 District.

14 C.W. WORKS,
NO: 2 DISTRICT.

Tele: Extn: 13623.

Ref: OE/740/7.

Date: 9th Mar. 44.

The Director of Public Works and Utilities Sub Commission,
Headquarters,
A.C.C.

1. A programme of Road construction and repairs and Bridge reconstruction in No. 2 District has been prepared and requirements have been passed to the Chief Public Works Director with a request that a list of Equipment, Stores etc. necessary to carry out the programme, be forwarded in order that provision can be arranged.
2. This had been done and arrangements are being made whereby, it is hoped, necessary Equipment and Stores can be made available from Army Engineer sources, but in addition to the Equipment and Stores asked for, the Director of Public Works has put in a demand for 70 - 5 ton lorries for the next six months.
3. I have asked Headquarters, No. 2 District for this transport, and have been informed that it is not a District responsibility to find transport for a Civil organization, though it has, in fact, been represented by Headquarters No. 2 District to Headquarters A.C.M.P. that transport would have to be found for the Road organization recently formed for the Construction and Maintenance of Roads in this District.
4. It is considered, therefore, that A.C.C. should apply for the necessary transport to A.C.M.P. Headquarters, and in the meantime, I will endeavour to meet urgent requirements from Transport allotted to me for normal Works Services. The amount I can find, however, will be far short of requirements for the complete Road programme to be put into effect.

RECD/TJK.

25 April 1944

Subject: Hiring of AASS Roadworkers. Transport and Material difficulties

To : Comm. Giovanni Grauso, Chief Engineer
Ministry of Public Works, Salerno.
Through: ACC Public Works and Utilities Subc. Public Works Div.
Attention: Lt-Col. J.F. Lebeon.

1. This is to confirm our conference of yesterday, which was initiated at the request of Ing. Scalera, since I had questioned the present AASS method of hiring road maintenance workers through contracts and not directly by the AASS.
2. I had been previously given to understand that all your temporary Road maintenance workers are on the AASS payroll. While this is technically correct since they are carried on the cantoniere payroll, actually these men are hired and paid by the various contractors who then later are reimbursed by the AASS. When on the job site these road workers then fall directly under AASS supervision. Apparently it is the common practice for the AASS throughout "King's Italy" not to hire road workers directly, but always thru a contractor acting as the middleman.

3. You expressed your desire of handling all the hiring etc. of your Road workers directly, but that this would not be possible at present, since practically no transportation is available for your engineers to do such hiring of labor nor, what it is even more important, give proper supervision to these contractors and the jobs in general.

4. It was agreed that for the PBS Area Road (Highway N°18, Battipaglia Southly) the job of patching and eventual sealcoating should from now on proceed rather smoothly, since sufficient trucks and bitumen are available for this work: my car to take your engineer to this job site as often as practical.

432;

5. Regarding the suggested hiring of additional maintenance workers (5 men per each Km.) the objection was raised that it was futile to do such hiring at present, until the matter of transportation for the AASS was clarified, since only 2 trucks and very

little bitumen have been assigned to the AASS for the Rd. Section Avellino-Salerno-Auletta-Foscole Marone (Lagonegro). The same difficulty would be for letting Road contracts since you had no assurance that definite quantities of trucks and Bitumen would be available.

6. You strongly stressed the point that the AASS wants to take full responsibility for the supervision and execution of the purposed highway construction program, however that under present condition with practically no transportation and no bitumen such an execution of the program is impossible.

7. This office fully realizes the difficulties of the AASS Section, and it is hoped that arrangements can now be made through the various interested agencies resulting in procuring the necessary transportation for the AASS.

MILITARY RAILWAY SERVICE
Office of Director General

A. P. O. 400
16 February 1944

Subject: Reconstruction of Railway Bridge near Lauria

To: Lt. Col. L. A. Jenny, C.E., Director of Public Works &
Utilities Sub-Commission, APO 394.

1. Attaching hereto one copy of map "Railways of Northern Italy",
dated this Headquarters 20 October 1943, one copy of map "Railways of
Southern Italy", dated this Headquarters 18 October 1943.

2. On this latter map have indicated:-

(a) In solid red color lines of military value, and
which are open to service.

(b) In dashed red color lines of military value which
are under repair.

(c) All rail lines in the occupied area not colored, are
lines, which for the present, are considered to have no
military value. In the case of standard gauge railroads, the
uncolored lines are not serviceable. In the case of narrow
gauge lines, the lines not colored may or may not be ser-
viceable.

3. The narrow gauge line Logonegro to Spezzano has no military
value.

4. If this line is to be repaired, it should be handled by the
appropriate Sub-Commission of the A.C.C. If it is operated, it will not
be operated under the supervision of this Headquarters.

5. This Headquarters is interested in the repairs and operation of
the line in question on one basis only, and that is whether the reconstruct-
ion and operation of this line will necessitate the use of vital railway
materials which are needed for the rehabilitation and operation of lines
of military necessity. It will, therefore, be necessary before this work
is undertaken thru A.C.C. Agencies, that this Headquarters be advised:-

(a) As to the total amount of repairs necessary to
place the line in operations

- (b) Materials required for such work, and where it is expected to obtain such materials.
- (c) The type and estimated amount of train service which will be used in connection with operation of the line, for the use of this Headquarters in determining the probable amount of railway supplies needed for the continued operation.

Subject: Bridge Construction

To : Chief Engineer, N.W.D. District,
B.C., A.M.C., Naples.

1. Reference Minutes of Head Conference 6 April 1944, Ref. 4001/6, paragraph I,(6), stating "Campestrine bridge (No. 240 101) - design awaited".

2. The contract for this bridge was let through the Selwyn Division AGO Public Works Officer, Major L. J. Benning, on 7 January 1944, Contractor: GVALMIA Consorzio, Via Indipendenza, Selwyn, Lump sum contract, contract price £3,000,000. On turning over recently the contract documents etc. to this Division, Major Benning stated that the design had been approved. The work on this job has been in progress for about 6 weeks and the cement requirements for the months of March and April (a total of 60 tons) had been previously obtained by the Provincial Public Works Officer through the C.M.

3. Reference is also made to List No. 2, Priority for Bridges Construction (letter of transmitted dated 21 March 1944), which lists the material requirements for this bridge as 120 tons of cement and 80,000 bricks.

15 April 1944

Subject: Salerno-Battipaglia Read Situation

To : Lt-Col.Jenny, C.E., Director.

1. It is understood that Brig.Foley made an inspection of work on above section of Route 18 on Tuesday, April 11th, and complained that volcanic ash, etc. was being used instead of bitumen which had been requested urgently by us for this work.
2. Our records show, and our field engineers report, that we have repeatedly requested bitumen by letter and thru our liaison officer, Lt.Gentry and the first supply of it from the CRE was 40 bbls which was delivered on Friday, April 14, with premises of more to be delivered in the near future.
3. With reference to improper use of volcanic ash for patching work, this was resorted to as an emergency measure to do something constructive in the absence of bitumen or other more suitable material.
4. With reference to Colonel Burns report that no work was being done on ~~this~~^{the} road when he inspected it on Easter Sunday and/or Monday, it was impossible to have Italian workmen do anything on these holidays.
5. As a matter of record, the fact that much of loose material was scattered off this road by tank maneuvers Thursday and Friday April 13 and 14 - which travelled on some stretches as fast as 45 mi/hr - is one reason why this road is not in better condition than it now is. If the holes had been filled with emulsified bitumen asphalt (which was not available) instead of having had to be filled in wet weather with loose material, such as volcanic ash, (the best material available at time) its condition might be much better at present time.

Railways of Calabria & Lucania
Reconstruction works of the
Lauria Bridge

I have asked the Chief of the Construction Office of Ferrovie Calabro-Lucane Company to speed up the shipment of the project pertinent to the above works for which they had forwarded (Your Very Illustrious Honor) prices offer without pertinent details, as per your communication of March 4, ACC 078, P.W.U.

Among the works to be executed there is a rather high column(pillar) of said bridge, the reconstruction of which will require some time. Owing to the great interest and utmost urgency of the reconstruction of the entire structure and consequent re-opening of the traffic interesting the transportation of lignite of the Mines of Mercure at Castelluccio Inferiore, I beg that Your Very Illustrious Honor may grant, with kind promptness, the allocation of 300 quintals of cement in order that work of said pillar be initiated as soon as possible while the project is being presented and approved.

I present my strong anticipated thanks.

THE DIRECTOR GENERAL OF THE MINISTRY
OF PUBLIC WORKS
(signed) Tizzano

Col Pepper

This is an important task known to us as the Lauria Bridge, on the narrow gauge railroad. Will you see what 31st be done to allocate this cement, so that when we can approve data submitted in sufficient detail we can proceed without delay

Sunday, 27 Feb. 44. Week ending 4 Mar. 44.

DIARY.

Sunday, 27 Feb. 44. A.M. General office work.

P.M. With A.A.S.S. Engrs. Crocetta and Gattone to bridge job at Laurenzana, 23 miles S. of Potenza on Hy. 92. The temporary bridge there, reported to have been washed out yesterday by flood water.

Fair to good black top Hy. for 4 miles from Potenza, then well maintained macadam road (waterbound). Directly S. of Potenza at Hy. over River Basento have timber repaired Arch bridge. Old masonry arch destroyed by Germans last fall. Repair job done by private contractor through A.A.S.S. Good design and construction job, however timber somewhat light. Road up and downhill through oak timber, passed several smaller rock and sand quarries. All crushed rock for road maintenance is apparently cut by hand (broken by hammer) by the road patrol man (cantonieri) for his particular 4 mile stretch. A.A.S.S. has no rock-crushers (frontoio), but according to engr. 4 or 5 rockcrushers are at Potenza owned by private contractors. Occasional ruts and potholes on this road, otherwise excellent. Rockcrushers and trucks for stockpiling the crushed rock would speed up and insure better maintenance. (This especially true on road to Auletto, Hy. 94, where at places the cantonieri has no rock available to fill in the ruts; however A.A.S.S. has no trucks). Another good timber bridge repair job done by the Italians under A.A.S.S. supervision at destroyed 3 span masonry arch bridge over Torrente "Camastrà", about 3 miles N. of Laurenzana. Repair was necessary only on one arch, 45 ft span, 60 ft high, all hand hewn lumber, 12" x 14"; post cemented into the old retaining walls. (Must check design load). The job will last for years, no need at present for a permanent repair job there.

On reaching Laurenzana, about 1 mile west, over large creek (torrente) found old bridge, a single span, 12 metres, brick masonry arch, about 50 ft deep, completely destroyed (by Germans) and the temporary by-pass trestle (200 ft N. of old site) also gone, as result of flood yesterday. The by-pass embankment and timber trestle had been constructed by a contractor (Santo Massimo) under A.A.S.S. supervision at a cost of 200,000 lire (\$ 2,000). Failure of temporary structure due to erosion on west embankment of bridge.

If main channel which is full of debris (stones and silt) would have been cleaned out by the Italians, so as to provide a straight get-away for the water and a rock revetment put on the upstream 7. ~~april~~ [F7] embankment, the failure of this bridge very likely could have been avoided. The open gap at the "new" bridge site is now about 16metres hence repair recommended.

is apparently cut by hand (broken by hammer) by the road patrol man (cantonieri) for his particular 4 mile stretch. A.A.S.S. has no rock-crushers (frontoio), but according to engr. 4 or 5 rockcrushers are at Potenza owned by private contractors. Occasional ruts and potholes on this road, otherwise excellent. Rockcrushers and trucks for stockpiling the crushed rock would speed up and insure better maintenance. (This especially true on road to Auletto, Hy. 94, where at places the cantonieri has no rock available to fill in the ruts; however A.A.S.S. has no trucks). Another good timber bridge repair job done by the Italians under A.A.S.S. supervision at destroyed 3 span masonry arch bridge over Torrente "Camastrà", about 3 miles N. of Laurenzana. Repair was necessary only on one arch, 45 ft span, 60 ft high, all hand hewn lumber, 12" x 14"; post cemented into the old retaining walls. (Trust check design load). The job will last for years, no need at present for a permanent repair job there.

On reaching Laurenzana, about 1 mile west, over large creek (torrente) found old bridge, a single span, 12 metres, brick masonry arch, about 50 ft deep, completely destroyed (by Germans) and the temporary by-pass trestle (200 ft N. of old site) also gone, as result of flood yesterday. The by-pass embankment and timber trestle had been constructed by a contractor (Santo Massimo) under A.A.S.S. supervision at a cost of 200,000 Lire (\$ 2,000). Failure of temporary structure due to erosion on west embankment of bridge.

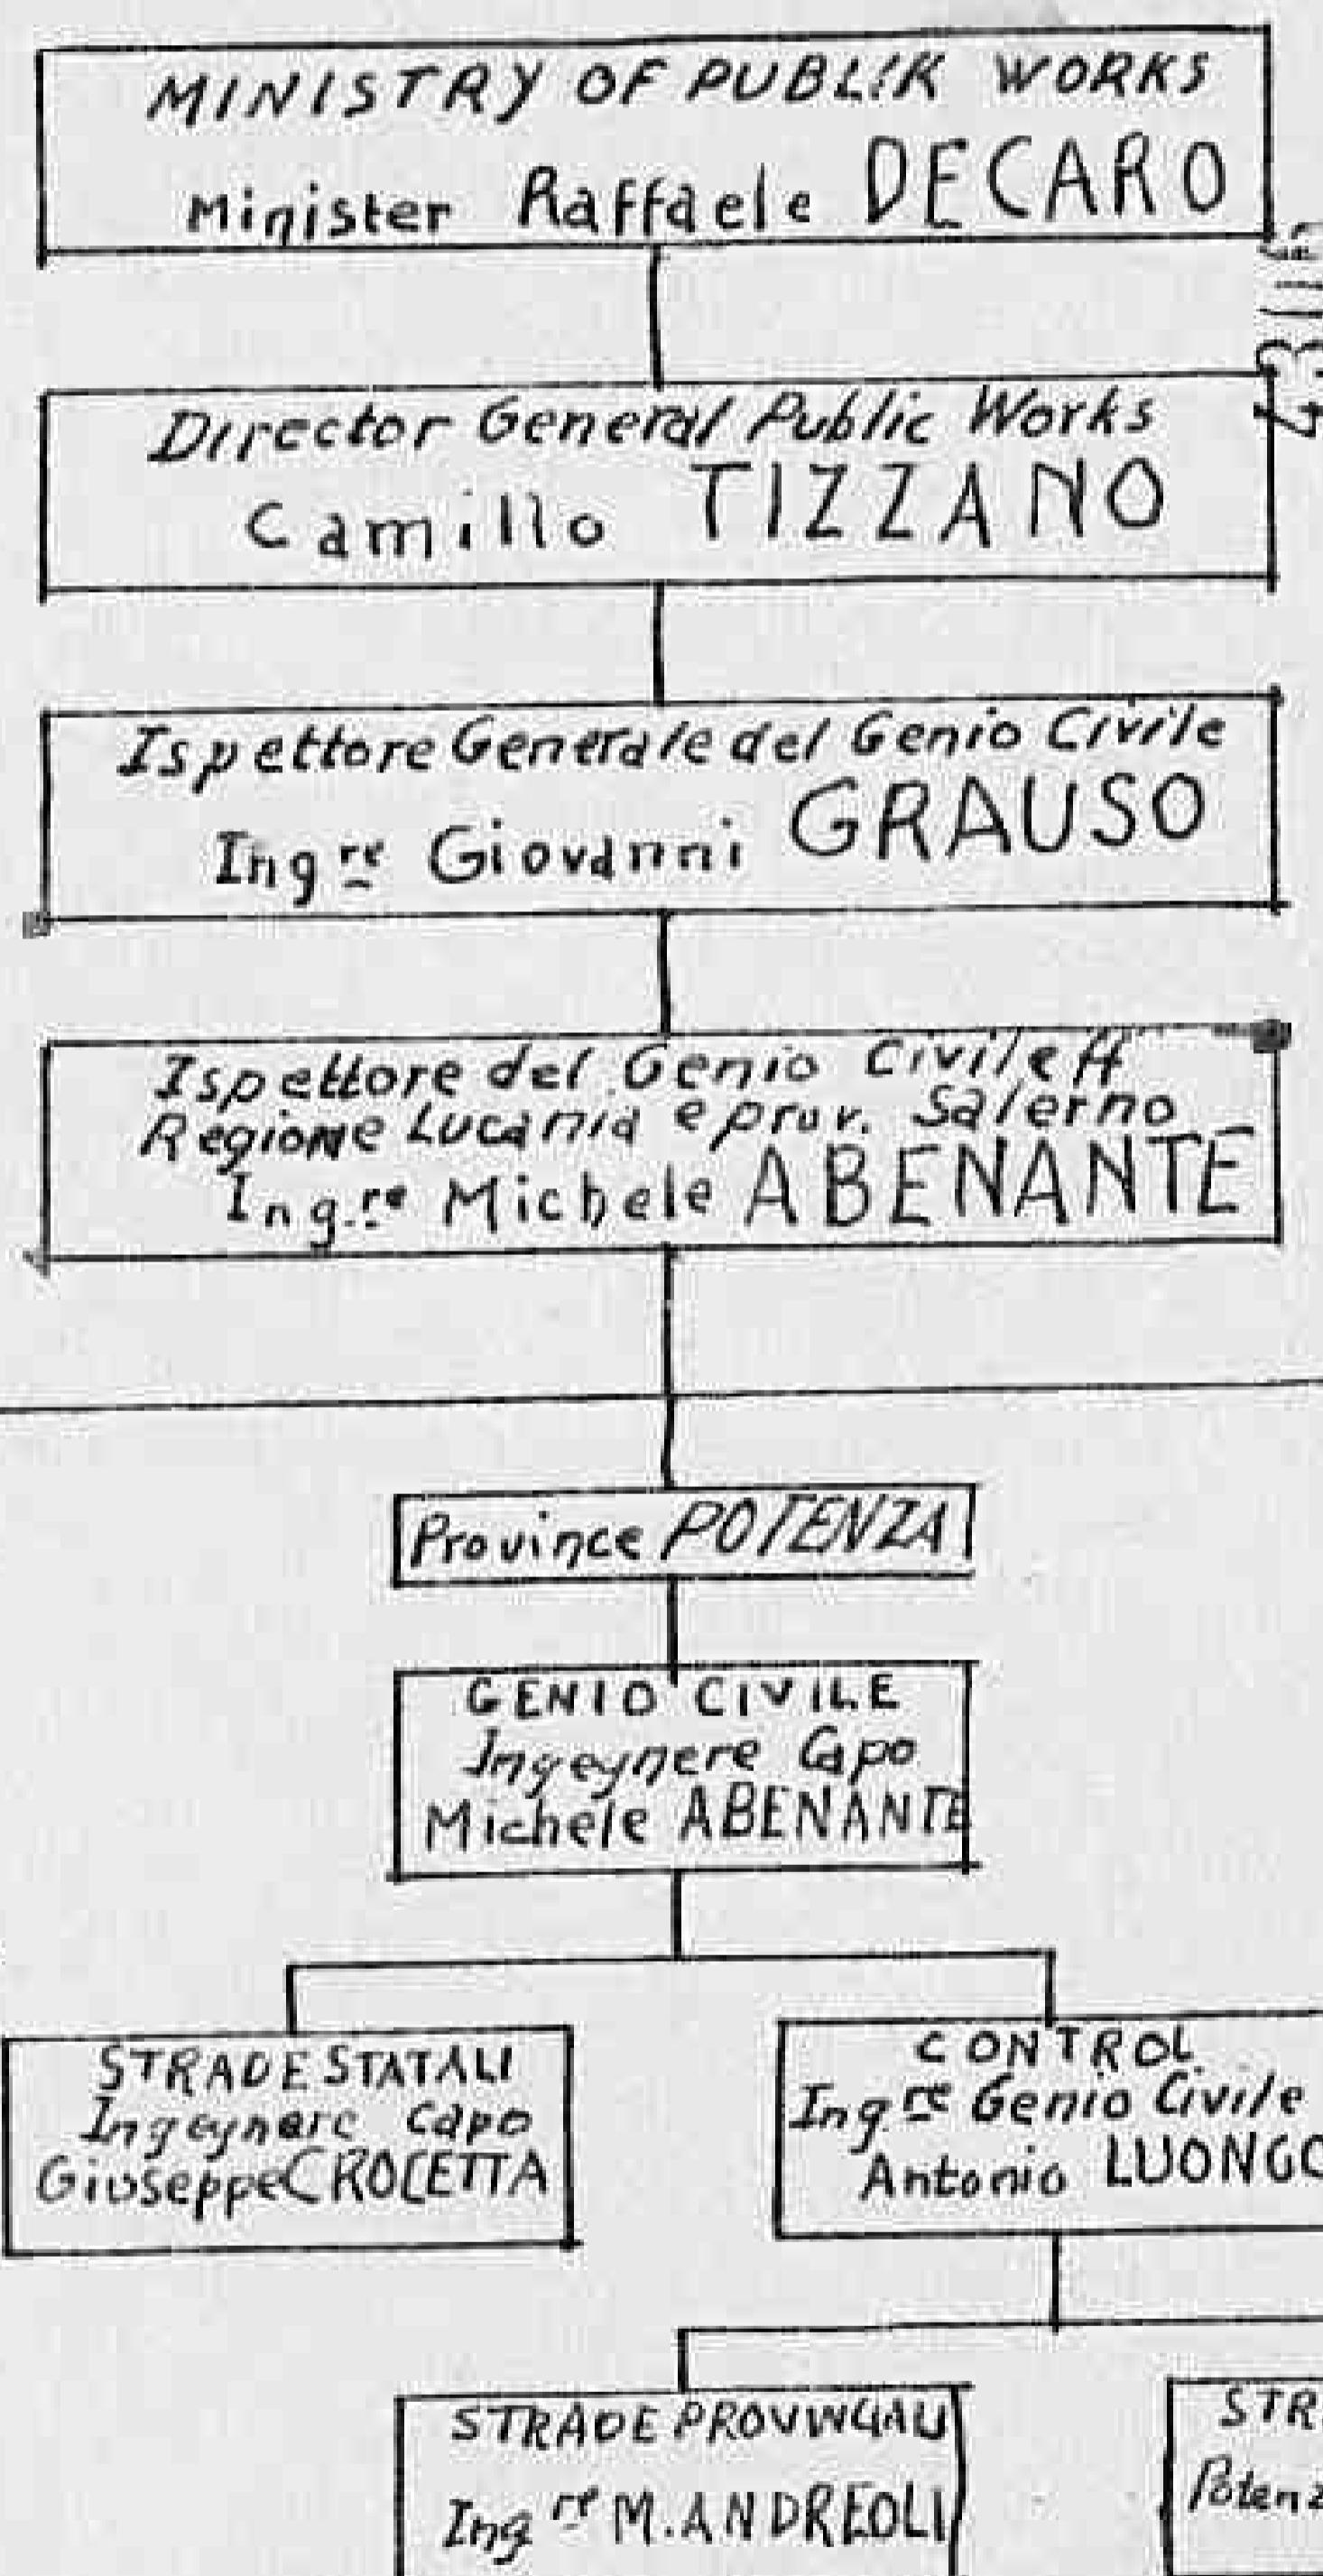

If main channel which is full of debris (stones and silt) would have been cleaned out by the Italians, so as to provide a straight get-away for the water and a rock revetment put on the upstream W. ~~apg~~ [F7] embankment, the failure of this bridge very likely could have been avoided. The open gap at the "new" bridge site is now about 16metres hence repair work should be started at the old site (12metresgap). Recommend no permanent repair for bridge, but a timber trestle similar in construction to the bridge 3 miles N. (see previous page). Most of timber from temporary bridge can be salvaged and other necessary timber can be cut and prepared nearby to site. (No sawmill available nor necessary). Asked Mr Crocetta for plans and estimate for the new job. Repair will take about 20 days. In the meantime road is "posted" and necessary signs will be put up.

A nearby R/R/ bridge had also been destroyed by the Germans. Repair work now in progress by local contractor (uses also "concrete" arch with masonry side walls and loose rock backfill); bridge open for R/R. traffic by about 20 Mar. 44.

Monday 28 Feb. 44. A.M. Conference with Provincial Chief Engineer Andreoli. Again same story as to "no" money available and no machinery, plant equipment nor transportation.
818 kms of provincial Hy's. (State Hy's in Totenza = 743 kms). ALL

major provincial road work is done through private contractor. Will get a list from Andreoli of all the main road and building contractors in the Province of Potenza, (I made a similar request to Mr Grauso for Lucania and Salerno and check then what equipment and material they have. Apparently a big item in Andreoli's budget is for "frane" (land slide repair). Has about 4,000 men (contractors' employees) over the State on bridge repair jobs, 23 bridges have been repaired per Andreoli. A total of about 40 bridges have been destroyed in Potenza Province by the Germans, most of them are passable now, (no figures available as yet on bridges and roads in Matera and Salerno Provinces).

Then had a call (visit) by a Capt McCall, R.E., from Bari and Capt. Lemesurier, R.E., the latter is taking Capt. Brown's place as local garrison engineer. McCall made a survey of road from Taranto to Matera and thence to Potenza. Reported a new bridge out (temporary structure) on Hy. 7, over Fiume Bradano, about 6 miles S. of Matera. McCall is going to the bridge job at Lagonegro, apparently a double Bailey bridge ~~not up~~ is being put up there. McCall stated that the road S. of Matera where bridge failure occurred, was not "posted".

P.M. Time off.

Tuesday, 29 Feb. 44.

Road inspection Potenza to Gravina and return. (cold, windy, occasional heavy rains). This Hy. (Strade Statale), No. 96, has black top throughout; in fair to good condition from Potenza to Toiva (occasional short stretches where Hy. was damaged by mines and where complete resurfacing is necessary). Three bridges between Potenza and Toiva (19.4 miles), all undamaged and O.K., (1 concrete - 130 ft, 1 masonry - 50 ft., and 1 masonry bridge - 75 ft span.) From Toiva to Irsino: black top generally fair; resurfacing advisable. One section of 0.3 miles with black top completely gone. Single span concrete bridge, 60 ft., over Torrente Castagna O.K., no damage; same on 40 ft. masonry bridge over Torrente Alvo and on 3 - Arch masonry bridge, 120 ft., over Fiume Bradano. Also 40 ft. steel bridge over Tor. Percopo, 5 miles west of Irsino is undamaged and in good condition.

Small culvert 3.7 miles W. of Irsino was blown up by the Germans. Very poor by-pass there, single track, a distinct bottleneck ~~at~~ Culvert now being repaired by contractor Th. Salvagio, supervision under Genio Civile Capo Ing. A. Sebastianelli at Matera. A.N.G.O.T. at Matera through Genio Civile at Matera let this contract. 10 men on job, ⁴⁴ contemplated completion date 11 Mar. ⁴⁴

Then had a call (visit) by a Capt McCall, R.E., from Bari and Capt. Lemesurier, R.E., the latter is taking Capt. Brown's place as local garrison engineer. McCall made a survey of road from Taranto to Matera and thence to Potenza. Reported a new bridge out (temporary structure) on Hy. 7, over Fiume Bradano, about 6 miles S. of Matera. Tuesday, 29 Feb. 44.

Road inspection Potenza to Gravina and return. (cold, windy, occasional heavy rains). This Hy. (Strade Statale), No. 96, has black top throughout; in fair to good condition from Potenza to Toiva (occasional short stretches where Hy. was damaged by mines and where complete resurfacing is necessary). Three bridges between Potenza and Toiva (19.4 miles), all undamaged and O.K., (1 concrete - 130 ft., 1 masonry - 50 ft., and 1 masonry bridge - 75 ft. span.) From Toiva to Irsino: black top generally fair; resurfacing advisable. One section of 0.3 miles with black top completely gone. Single span concrete bridge, 60 ft., over Torrente Castagna O.K., no damage; same on 40 ft. masonry bridge over Torrente Alvo and on 3 - Arch masonry bridge, 120 ft., over Fiume Bradano. Also 40 ft. steel bridge over Tor. Percopo, 5 miles west of Irsino is undamaged and in good condition.

Small culvert 3.7 miles W. of Irsina was blown up by the Germans. Very poor by-pass there, single track, a distinct bottleneck ~~4~~ 30' culvert now being repaired by contractor Th. Salvaggio, supervision under Genio Civile Capo Ing. A. Sebastianelli at Matera. A.H.G.O.T. at Matera through Genio Civile at Matera let this contract. 10 men on job, 75% completed, contemplated completion date 11 Mar. 44.

0.1 mile E. similar small 15' culvert is undamaged and O.K.
0.2 miles E. of Irsina, 90' single arch brick masonry bridge completely destroyed, (over deep gully). 90' Bailey bridge over by-pass in place. Old bridge now being repaired by contractor Tony Farrina of Taranto; contract let through same channels as on culvert above. Pounding of 30" concrete arch completed, no reinforcing, rich mix, not much coarse aggregate. One side wall section is up, also concrete job, 40" thick wall. 15 labourers on job, no concrete mixer, all hand labour; estimated completion date 31 Mar. 44.

From Irsina to Easterly boundary line, Province of Matera, (8 miles) black top good to fair, occasional bare spots (mines). The two 170' masonry bridges over Torrente Basentello undamaged and in excellent condition.

From boundary line to Gravina, 8 miles, Black top fair; one Bailey bridge in place 4 miles E. of Stateline, by-pass now being constructed by Italian labour, under R.E. supervision, one steam roller on job.

10
- 3 -

0.6 miles off-pass (detour) just before reaching Gravino. Bailey bridge over main road. Section now being removed by R.E. Did not enquire into details of the last two bridges jobs, since they are located outside my territory.

Wednesday, 1 March 44.

General office work.

Conference with Strade Statale Capo Ingre. Crocetta re availability of plans and profiles of main roads now under consideration by us for repair. No plans and profiles of the state highways are available, nor have they ever been prepared by his office (A.A.S.S.) for these roads. He could not even answer the question how many bridges and culverts there are between Salerno and Potenza (Hy's. No. 19 and 94). Road survey maps of each main Hy. as we expect them to have already available in our own Hy. Dept. offices, are not made by the Italians, main reason: because these main roads here have been in existence for centuries. Only available profile of these Hy's. is found in published handbook of the "Touring Club Italiano", entitled Guida della Strade di Grande Comunicazione, of which I have a copy in the office, (scale 1km = 2cm, 1:200,000). Crocetta appears to be an efficient and well trained engineer, who wants to do a good job and wants to know what is going on in his territory, (State Roads in Provs. Salerno, Potenza and Matera). However due to inefficient means of communication and extreme lack of transportation, he simply cannot properly function and keep in touch with his territory, obtained from him the following figures:

State roads, Province of Salerno	= 404.281 km	= 251.2 miles.
" " "	= 743.132 "	= 461.7 "
" " "	= 280.524 "	= 174.3 "
Total	1,427.937 km	= 887.2 miles.

All engineering supervision and design work on A.A.S.S. Hy's. is done by Crocetta and his assistants, both in road and bridge construction and maintenance work. Has four more engineers (geometre) working under him. For the large road maintenance and reconstruction programme contemplated by us and to be executed by the Italians, it appears that his present office force is considerably understaffed. Discussed with him also the immediate need for better maintenance on sections of the road from Potenza to Salerno, a very poor and rutted stretch extends for about three miles, east of Auletta. Difficulty is that the A.A.S.S. never had their own plants and equipment for carrying out any major or even minor road programme, every thing before had been done through contractors.

are between Salerno and Potenza (Hy's. No. 19 and 94). Road survey maps of each main Hy. as we expect them to have ready available in our own Hy. Dept. offices, are not made by the Italians, main reason: because these main roads here have been in existence for centuries. Only available profile of these Hy's. is found in published handbook of the "Touring Club Italiano", entitled Guida delle Strade di Grande Comunicazione, of which I have a copy in the office, (scale 1km = 1cm, 1:200,000). Crocetta appears to be an efficient and well trained engineer, who wants to do a good job and wants to know what is going on in his territory, (State Roads in Provs. Salerno, Potenza and Matera). However due to inefficient means of communication and extreme lack of transportation, he simply cannot properly function and keep in touch with his territory, obtained from him the following figures:

State roads, Province of	Salerno	= 404.281 km	= 251.2 miles.
" "	Potenza	= 743.132 "	= 461.7 "
" "	Matera	= 280.524 "	= 174.3 "
Total		1,427.937 km	= 887.2 miles.

All engineering supervision and design work on A.A.S.S. Hy's. is done by Crocetta and his assistants, both in road and bridge construction and maintenance work. Has four more engineers (geometre) working under him. For the large road maintenance and reconstruction programme contemplated by us and to be executed by the Italians, it appears that his present office force is considerably understaffed. Discussed with him also the immediate need for better maintenance on sections of the road from Potenza to Salerno, a very poor and rutted stretch extends for about three miles, east of Auletta. Difficulty is that the A.A.S.S. never had their own plants and equipment for carrying out any major or even minor road programme, every thing before had been done through contractors. The general purpose bituminous repair mixture used previously by them has been about as follows:

Crushed rock 4cm - 2cm	= 40 - 75)
Crushed rock 2cm - $\frac{1}{2}$ cm	= 25 - 60) % of mix.
Bituminous binder	= 4 - 5.5)

For increased stability of this mixture they substitute not in excess of 35% powdered asphalt for an equal weight of oil, however a mix with relatively large % of powdered asphalt is unsuitable for stock piling for long periods.

"Ragusa" bitum. surface construction:
Ragusa method needs careful application, cannot be used at low temperatures
They prefer liquid bituminous materials.

Thursday, 2 March, 44.

Most of day was spent in conference with Major Hyland and Ing. Grauso - outlining the general scope of the road programme and giving to Mr. Grauso the various Hy. priority job as being of most urgent need for repair for the efficient operation of the Allied war effort. Outline of work to Mr. Grauso covered the entire A.C.C. area. In my district

- 4 -

(Regione Lucania and Province Salerno) immediate reconstruction work to begin on: (i) Hy. Salerno to Battipaglia and (ii) Hy from Battipaglia S'ly (No. 18); (iii) repair of bridge over River Sele (Ptc alla Scafa, N. of Paestum; (iv) Reconstruction of the two bridges East of Eboli (Hy No. 19); (v) Design for new bridge at Auletta (Bailey bridge there now). (vi) Get other Baileys out as soon as possible; (vii) Major repair work to be done immediately on Hy. 96 between: Gravino to Tolve, base failure there; (viii) On Hy. Spezzano - Taranto keep ~~xxxxxx~~ gravel blacked and ditches cleaned. (ix) Resurface patches caused by bomb craters immediately and (x) Put increased effort on maintenance work on the other main Hy's. The outlined work to Mr. Grauso should normally not be too much of a job and according to our American Hy. construction methods can be considered only as a minor construction programme (at least the sections in my district), however in my opinion it is extremely doubtful if the Italians will be able to carry this programme out. The A.A.S.S. has only a few engineers, practically no plant and equipment except perhaps what little may be in the hands of a few contractors and trucking facilities are nil. Actual assets at present are (1) an unlimited amount of rock in fairly well distributed areas (but no rock crushers), (2) sufficient amount of hand labour (but a shortage of hand tools perhaps); (3) necessary timber for bridge repair can be cut locally; (4) teams and wagons very likely can be requisitioned for Cr. rock hauling, a slow job but an expedient till better hauling facilities are available; (5) a small, but efficient nucleus of Italian engineers.

To get this job going, the following alternatives can be resorted to:

- (1) By a strict forced requisition from private sources, the Italian Government secures for their Public Works Section (or contractors) the necessary machinery and equipment to overcome the present shortage of transportation and deficiency in equipment.
 - (2) Make use of personnel and equipment of the Italian Army to carry out the programme.
 - (3) We supply most of the material, equipment and transportation to the Italian Hy's. authorities (or their contractors).
 - (4) We do the job ourselves with American and British Engr. Constr. Bn. personnel and equipment.
- From my own experience I know, that 3 American Engineer Constr. Bn's. (preferably Avn. Engrs.) could easily handle the job in my district. Probably a combination of all four methods will have to be used.

(x) Put increased effort on maintenance work on the other main Hy's. The outlined work to Mr. Grauso should normally not be too much of a job and according to our American Hy. construction methods can be considered only as a minor construction programme (at least the sections in my district), however in my opinion it is extremely doubtful if the Italians will be able to carry this programme out. The A.A.S.S. has only a few engineers, practically no plant and equipment except perhaps what little may be in the hands of a few contractors and trucking facilities are nil. Actual assets at present are (1) an unlimited amount of rock in fairly well distributed areas (but no rock crushers), (2) sufficient amount of hand labour (but a shortage of hand tools perhaps); (3) necessary timber for bridge repair can be cut locally; (4) teams and wagons very likely can be requisitioned for Cr. rock hauling, a slow job but an expedient till better hauling facilities are available; (5) a small, but efficient nucleus of Italian engineers.

To get this job going, the following alternatives can be resorted to:

- (1) By a strict forced requisition from private sources, the Italian Government secures for their Public Works Section (or contractors) the necessary machinery and equipment to overcome the present shortage of transportation and deficiency in equipment.
- (2) Make use of personnel and equipment of the Italian Army to carry out the programme.

(3) We supply most of the material, equipment and transportation to the Italian Hy's. authorities (or their contractors).
(4) We do the job ourselves with American and British Engr. Constr. Bn. personnel and equipment.

From my own experience I know, that 3 American Engineer Constr. Bn's. (preferably Avn. Engrs.) could easily handle the job in my district. Probably a combination of all four methods will have to be used.^{43U} Prime requisite is: Furnish these Italian engineers proper transportation, so they know what the road streitus is in their district.

Friday, 3 March 44. Two hours in office with Major Hyland on general construction matters and office work, then rest of day in conference and discussion with Italian compartmental engineer M. Abenante. Mr. Abenante has two positions: he is "Ispettore" for Genio Civile, for Lucania and Province Salerno and "Capo Ingegneri", ~~xxx~~ Genio Civile, for the Province of Salerno. Had some difficulty to get these various titles and functions clear in my mind; he had no organisation chart available for this Hy. Section of the Genio Civile, in fact he had considerable difficulty to obtain the names of his various engravings under him in the three provinces. The entire set up is only at present ~~of paper and does not function as yet smoothly (poor mail service and no transportation)~~. Drew up an organisation chart of the Hy. Section of the Genio Civile for the three Provinces, which was checked by Mr. Abenante, (see attached sheet); the names of the Provincial engineers

- 5 -

of Salerno I have to get myself yet. Will take Mr. Abenante along on the next trip to Salerno and Matera, so at least he is able to meet his engineers. The Genio Civile office is under the supervision of the "Ispettorato" Genio Civile, i.e. the Genio Civile is the executive office of the Ispettorato. Spoke to Mr. Abenante re subject matter of letter HQ. A.C.C., 29 Feb. 44, subject: "Memo for field officers". He had not available a list of any contracts now in force, either strade statale or provincial; nor did his control officer for Hy's., a Mr. Luonge, have any data. (Am wondering what the Ispettore and the control officer are doing, if they don't even have the basic records of the work being carried out under their jurisdiction.) They promised me a list of the contracts now in force for next Monday. In the course of our discussion found out that Ingref. Andreoli (see report of Monday, 28 Feb. 44) has not 4,000 men on bridge repair jobs at present, but only about 100 men are working on provincial repair jobs. (Perhaps my Italian was not good enough when I spoke to Andreoli.)

Saturday, 4 March 44.

Road inspection Auletta to Lagonegro (45.2 miles). Bituminous surface coat (black top) over most of this section, generally in fair to good condition, immediate repair advisable only on a few bad spots through the villages, (patching and seal coat); resurfacing on several filled in mine crater holes as well as complete resurfacing needed on 0.8 mile stretch $1\frac{1}{2}$ miles north of Lagonegro. Bridges: (i) Two spans blown of five 30' brick arch bridge, 75' Bailey in place; 3.3 miles south of Auletta; (ii) Two spans blown of five 40' brick arch bridge, 90' Bailey in place; 2.7 miles south of Casalbuono. (iii) 110' Bailey bridge over stream in place, replacing double brick masonry arch blown.

Report on trip to Bari and Matera

39-6-44 & 39-8-44 Encd.

Left Naples Monday 10³⁰ A.M. with Maj. Heford
in his car and arrived at Bari 6⁴⁵ P.M.

Conferred Tuesday A.M. at Hotel Miramare with
Maj. H, Maj. Knight, and Lt. Bruneau, who was
requested to present since he was to go as far as
Taranto on his inspection trip.

At 11 A.M. we conferred with Engrs. Domanio
and De Cesare in Engr. Domanio's office re-
- Hwy. program. Engr. S. intimated as to take up
all matters directly with De Cesare who has his
full authority to act. Discussion covered
hwy. maintenance mats, location of rock quarries,
equipment req'd. per unit of hwy., transport,
and contractors equipment available. We were
assured that contractors in Bari District have
all equipment necessary except transport.

Conference with Brig. Dixon at 2³⁰ P.M.
Centered about equipment and mats which
W. S. must provide for hwy. program. The
Brig. was informed that we would need 50
trucks immediately for Priority I Highs, and

(2)

20 trucks for Bridge program. The Brig said he would make the request for these of his General promptly. He advised also determine how much equipment he could spare as for immediate maintenance work. He presented us with a copy of his estimate of manls. & equipment requirements for hvy. program for next 6 months (a copy of this is being sent Maj. Hyland). The Brig was surprised when informed that Italian Engineers assured we we should have no difficulty finding sufficient equipment. We were informed that 16 W.D. trucks had been assigned to our territory for maintenance work. There is some difficulty to be expected with civilian drivers employed by W.D. to operate W.D. trucks as is the case in the Army area (north) where one driver makes one round-trip a day with a W.D. truck. We presented the Brig with a copy your map of hvy. to be used for progress reports. The Brig. was told that we were stressing particularly at this time the necessity for proper maintenance of ¹³ ~~12~~ surfaces & that we were asking the Govt. to furnish extra labor for this purpose immediately.

Left Bari at 5 for Matera to see Lt. Col.

in Caffrey but found he was in Naples.
Discussed hvy. program & what they were doing
on bridges with Maj. Trickett(Bknd Rd,
(B) neither of whom is an engineer. We asked for
their cooperation and assured them of our assist-
ance & collaboration. They had no contract work
in operation at the present time. Requested
Maj. Hyland to send Capt. Weber to Matera to
go into detail discussion of any bridges or
hungs, they wanted to repair in their Region.

Left Matera at 9 wed. & arrived Naples
at 5 pm., stopping at Potenza.

John F. Haran
Lt. Col.

Lt Col.Jenny.

1. I have discussed bridge classifications with Major Jenner RE, of the DDW's Office, AFHQ. The American system has been brought into line with the British, so far as he knows.
The attached booklet was got out in June 43 and is of some value. The tables that are reliable I have marked with a red tick; those in the first part of the book (formulae etc) have been proved NOT to be very reliable. They may be taken, only, as a very rough guide indeed.
2. Classifications run from suitable for 5 ton tanks up to 70tons (see Table 3). Also Table 1. The "EUDL" stands for "Equiv.Uniformly Distributed Dead Load". There is another bridge classification known as "H..... so and so"; this is mentioned in Table 4. I was not able to get from Major Jenner the precise significance of this, save that it refers to portable steel bridges. Probably Lt Col Thompson, with his recent specialised RE bridge experience in England can throw some useful light on the relationship between this, and the 5 to 70ton "tank" suitability.
3. I raised with him the question of limiting gradients
minimum curve radii
foundations and surfacing,
since all these three factors also enter into the general classification of any given length of highway.
Round some curves e.g. hair-pin bends, it is possible that a Churchill tank on a transporter (the 70 Classification) could not get round. He rang up a Staff Officer at AFHQ but could not get the min. radius; he will let us have it later, and also about gradients, though this latter is probably not very important.
About surfacing and fdns etc, this is a matter of judgment, and the volume of intensive traffic expected.

SUBJECT :- materials

TO :- Director of Public Works and Mines
Sub-Commission

From :- S.C.A.O. A.M.G. Salerno

Attention Lieut-Colonel Lepter

The Public Utilities Dept. here has a large number of contracts completely held up owing to lack of materials chiefly cement and bricks. Col. Jenny suggested that J. Get into touch with you on the matter.

Amongst the contracts held up are over 30 bridges of which about half are on Military Roads. If you are likely to be here it would be helpful to make your acquaintance and if we know when you are coming it would be a pleasure to give you lunch.

TPV Report No 2

13 Feb.

To. Chief of P. Workshops Col. Jenny. Headquarters
Acting Director.
From W. H. Gamble. ^{Capt.}
Subject Report Roads & Bridges Calabria.
Date 14 Feb. 44.

Sir:

I have the honour of reporting that I have now completed inspection of the State Road Province No 1 Lagonegro to Reggio. + am familiar with the conditions existing throughout the entire length.

As stated in Report No 1. Major Dentzner of British Military Mission is at present handling the constructional + maintenance work through the Italian Military Authorities ~~extinct~~ Army Corps.

I have consequently in the absence of specific instruction been extremely punctilious + circumspect not to in any way interfere with the present administration or superimpose myself on the administrative organisation, which in my opinion is functioning efficiently.

It now appears that the Italian Authorities do not propose to re-build several of the bridges, but limit their activities to the improvement + maintenance of good diversionary ⁴²⁹¹⁵ roads + substitute filled truss bridges for the original structures at the most convenient point. The approaches in several cases, although being improved leave much to be desired in order to maintain an

even flow of traffic. The timber bridges as such, are well constructed & good for a number of years, sufficient regard however is not being had to the effect of heavy rains & consequent flood water. The possibility of applying a Bismophalte surfacing on the timber decking, is one which can be experimented with, if materials are available.

Snow-clearing of Roads. The removal of snow by cattle drawn snow ploughs is being energetically pursued & gangs of soldiers are continually engaged on this work. I passed over the mountains from Cosenza to Nicastro & found this work well in hand.

There is very little more I can do till I receive further instructions & whether it is proposed that the British Military Mission will continue to function in its present capacity.

Reggio

As a point of interest about 39 Ships of various sizes are
sunken in the harbour restricting the use of the port. The C.A.O.
gave me this information. A ship equipped for ship-raising is
also at the bottom. It is known that several of these ships contain
valuable stores & one is known to contain rubber. No move is being
made by the Italian Authorities. — As this work is outside my mission
I did not pursue inquiries, but gathered the impression ^{52.8%} that an
Officer with drive could get quick results in this work. I crossed
over to Messina on a Infed's. Boat. to contact a certain Italian

3

Naval Officer who has full records of cargoes & ships sunk.
but was unsuccessful in finding him. The following facts are
however apparent.

- 1 It would take 3 months to raise the Salvage Ship
- 2 Naval assistance British or Italian would be essential
- 3 The ships undoubtedly contain evacuated German stores
- 4 It would not be necessary to raise the ships to obtain the stores.

In pursuing this matter however I have taken the view
that the Port of Reggio is at the end of the State Road &
should be put into a condition to function efficiently for
loading & unloading in close relationship with the carrying
capacity of the road itself which extends in two directions.
viz. the State Road & the East Coast Road.

Bridges The Bridges 7, 8, 9 & 10 are estimated to cost 5,300,000 lire
materials required - 6,400 quintals cement. 75 tons steel. These
bridges are at Melara, Petrace, Cavarria & Parassina respectively.

Transport If the command car & Driver is required at ~~not~~
station, it would be possible for me to requisition a civilian car.

The command car is too heavy on Petrol & too big for my
needs.

I am maintaining contact with Correggio & Catanzaro
quarters. & information is required on future administration
concerning British Military Mission

(2) The command car is available for recall or replacement by a Jeep.

4

10

Telegraphic communication with your station is not possible at present, + courier service irregular.

4 Whether further action or information is required re. Reggio Port.

5 I have found Italian officials helpful & willing to collaborate. The financial problem however in the background leads one to suspect a certain reluctance to push things too fast. This state of mind in the higher spheres of influence reacts detrimentally towards rapid progress.

I have the honor to be.

Yrs. respectfully

W. H. Gamble Capt.

You ask Col Allfrey to look into all available courier service, mail, money and at H.Q. and advise us by

3 March 1944

Memo re Conference

With Brig M. Foley (B), 1430, 1 Mar 44.

Arrived half an hour late due to breakdown of Major Hyland's command car necessitating substitution of jeep. Lt-Col Thompson and Lt. Gentry were already there. Major Hyland was with me. Lt-Col W.Brundon (D) and Capt A. Osborne (B) were present with the Brigadier.

The discussion centred on roads and bridges, the methods of repair and maintenance, materials and equipment, labour and priorities.

In the Kingdom of Italy, the following roads were decided upon as being of first priority:

1. Salerno to Battipaglia.
2. Salerno to Avellino (North of San Severino).
3. Route 18, Battipaglia to near Ogliastro.

Also the following bridges:

1. Sele River Bridge on Route 19.
2. Sele River bridge on Route 18 (South of Battipaglia).
3. Auletta Bridge on Route 19.
4. Closest bridge to Salerno on Salerno - Avellino Road.
5. Closest bridge to Avellino on Salerno - Avellino Road.

Major Hyland was directed to arrange for a survey of these roads and bridges with Capt. Osborne immediately.

It was confirmed that the C.E. shall arrange for and furnish all materials which cannot otherwise be furnished and we are to make an estimate immediately of materials requirements for the highway program as well as for highway maintenance and submit same to Lt. Gentry for transmittal.

The C.E. has on order 185,000 gals of emulsion and 1,300 tons of solid bitumen but has no idea when these will be available.

He will try to determine the latter and let us know. They have 300 tons of solid bitumen on hand.

The meeting adjourned at 1645 Hrs.

Report on trip to Bari

For conference with Brig. Dixon, 16-17-18- Feb. 1944.

1. 16 Feb 44

Left Naples at 9.30 A.M. with Maj. Hyland.
Arr. Bari at 6.30 P.M., very cold, rain and snow.
Jeep with Maj. Knight in it burnt out a clutch enroute.

2. 17 Feb 44

Met with Brig. Dixon and Maj. Hyland was present.
Maj. Knight was delayed by breakdown of his Jeep, and
was not able to attend.
Discussions covered our survey of highways and bridges,
methods of repair and maintenance, materials involved
in kind and quantity, and priorities. Several roads
were added to the programme by Brig. Dixon. It was
strongly urged by Brig. Dixon that we should have an
officer on duty at our Bari office during the full
working day hours. Brig. Dixon will furnish this Sub-
Commission with a copy of a memo his office will prepare
covering the subject matter of the conference.

3. 18 Feb 44

Met with Maj. Knight at 9 A.M. and gave him a general
idea of the matter covered in the conference and requested
him to obtain the names of the Engineers of the Provinces
and Communes in his Compartiment and data on Contractors,
their equipment and materials, and other matters such as
office space and discussion of road program with Maj. Newby.
Left Bari at 10.30 A.M., arrived Naples 6.30 P.M.

Cosenza

From. W.H. Gamble. Capt.
Subject Report on Mission.
Date. 5 Feby. 44

Sir

I have the honour of reporting that I arrived at Cosenza 3 Feb., departing your station 2 Feb. I endeavoured to contact Lt. Col. Habour & found he had left, 4 days previously. On 4 Feb. I proceeded to Catanzaro to take up quarters & establish contacts.

During the course of my journey I took observations of the main route & made detailed examination of all blown bridges. Appended hereto is my detailed report.

On 5 Feb. I contacted Major Bentzinger of the British Military Mission, also Italian Engineers.

On Sunday 6 Feb. I proceeded to examine the remaining section of the route & having completed the preliminary object of my Mission. I returned to Cosenza ^{4391P} to make further contacts & also owing to its better position for local supplies, & communication by courier. I now

await instructions at Cosenza.

This station is better situated geographically for the preliminary inspection work, as Catanzaro necessitates a double journey of 52 miles on exceptional mountainous road, before reaching the main route.

The entire length of road from Lagonegro to Reggio is controlled by A.A.S.S. (Organisation for State Roads) and General Civardo is responsible for programme of work. The Italian 31st. Corps function over the entire length. - Major Bentynner of British Military Mission with Captain Gentle as Liaison Officers have supervised & collaborated with the Italian Military Authorities through Sectional Engineers, stationed at Catanzaro who is also responsible to No 2. District Chief Engineer at Bairi, as well as General Civardo.

I have obtained a copy of the monthly report for January 44. from the Sectional Engineers at Catanzaro to Commander XXI. Army Corps. This report gives a complete picture of the position as regards constructional work to Bridges, anticipated and contract dates for completion over the entire length. I have checked up on this report by personal inspection & have found it to be accurate, A translation will be forwarded.

I have the honor to be Sir

Yours respectfully W.H. Gamble
Off.

S.S. 4

Detailed Report of Road & Bridges

from Lagonegro to Freggio.

7. Jan. 44.

The road surface from Lagonegro to Soveria (Sheet 23, Bridge no 42) has asphaltic surface and is being maintained in good condition. Soveria to Nicastro proceeding South in fair condition, patching required at several lengths requires resurfacing. Nicastro to Freggio surfacing sufficiently good for traffic requirements. The entire length is being well maintained and may be classified as a 1st class road, with steep gradients & dangerous bends, unavoidable having regard to the mountainous country traversed. Warning signs are in evidence for sharp bends, railway crossings & schools. The hunchings are weak as in most continental roads & flush to asphaltic surfacing irregular at channels. Camber satisfactory on straight lengths, insufficient camber at bends for speeds over 30 M.P.H. Patching work & snow clearing was in course of operation at passage for traffic cleared at high altitudes. Stocks of material for repair work at side of road scanty.

I had a few hot holes in sections opened up to examine foundation, & found it to average 12" to 18" ^{4' 28"} ~~5' 28"~~ patching no evidence of creeping of surface on any section of this road

which bears evidence to the solid foundation & suitability of material used for climatic conditions.

Bridges

Reference to numbers should be made to H.A. Thompson marked map.

No. 1 Lagonegro Bridge: 1 Span blown (10 metres) 2nd Span damaged, but could be filled solid without impeding flood water. No work in progress

Bailey Bridge in operation over both spans.

Approach by ramp to 9 inches above old road surface
No. 2 Sta. Ratonda Bridge (5 M.P.H approach)

Single span (10 metres) stone construction

Diversion road operating (one way traffic)
No work in progress.

Lauria Bridge

3 Spans blown, diversion road operating & being worked on, to widening for two way traffic.

No work in progress on bridge

Castellaccio Bridge

Single span, hole bridge operating good approach.

Bridge under permanent construction

No. 11
No. 12
Completed

428

No. 13 3 Spans blown, diversion road operating satisfactory approach

310377

1013 (cont) Trestle bridge over River. Civilian labour ^{Italian} working on this bridge very dissatisfied with pay (5 lire per hr) 8 hr. day.

Piano Bridge

Work in progress by Italian military. Diversion operating moderately good.

Cosenza. Bridge

Permanent timber piled bridge, approach good, satisfactory for flood water. Concrete Bridge in different horizon completely destroyed.

15 Blown retaining wall, work completed.

16 One arch blown, work commenced by military

17 Permanent bridge nearly finished, timber bridge diversion being dismantled.

18 Trestle bridge, well constructed. approaches good.

192 Timber bridge, good approaches. no work in progress

66 Stone bridge 3 arches blown (quarries) reconstruction in progress on permanent timber bridge.

② Masonry bridge 5 Spans blown, permanent piled timber bridge alongside in use. Approaches good

3 3 Spans blown. Bailey Bridge in operation. work in course of progress on permanent bridge. Completion Date April 15th Diversion via timber trestle bridge, approaches good

Bridges. (Continued)

80

- 4 Masonry Bridge 4 Spans blown (10 metres) 5 spans standing. Bailey Bridge over 4 spans. Diversion made by 8th Army via railway track. Diversion not good, but being improved. Diversion to be made for permanent use. 2 way traffic end of February

- 5 Mixed Sections. work in progress by A.A.S.S.

- 7 Bailey Bridge over River operating. A length of waterbound macadam road in operation as approach, surface bad.

- 8 Demolished masonry bridge, single span 40 metres. Bailey Bridge on abutments. Piled timber bridge in course of construction alongside Bailey Bridge. (completion end of February)

- 9 Permanent bridge under construction 3 Spans. masonry. Diversion bad approaches.

Completion date 15th April.

428:

- 10 Work in course of construction on. Railway. Tunnel. entrance Bailey Bridge over gap in road, caused by blown tunnel which gave support to road. Retaining Wall being repaired by A.A.S.S. Completion date April 30th.

7 Feb 1945.

W. H. Gamble Capt.
