MEMORANDUM

SUBJECT: Newspaper article - "Does U.K. Crowding U.S. Out of Italy"

TO : Acting Vice-President
Economic Section

1. The question of an electric power interconnection between the Island of Sicily and the mainland, across the Messina Straits, has been under consideration by the Italian authorities since before the war. Due to the shortage of power supply in Sicily, the plans for carrying through of such an interconnection were reactivated during the latter part of 1945.

2. The first time that this matter was officially brought to the attention of Allied Commission was an inquiry from the Italian Ministry of Air to the Air Forces Sub-Commission dated 8 November 1945. In that letter the Air Ministry asked whether the Allies had any objection to the construction of such a crossing. At that time the Air Ministry had under consideration two types of construction, one being a submarine cable and the other by means of cables suspended from high steel towers to be erected on each side of the Strait. In order to be fully informed on the matter the Air Forces Sub-Commission made inquiry of the Economic Section on 15 November 1945 as to its views on whether the crossing should be submarine cable or overhead type.

3. After investigation the Economic Section wrote to the Executive Commissioner on 28 February 1946 setting forth its findings; and in addition recommended that the decision on the matter be left with the Italian Air Ministry itself. This recommendation was in turn forwarded to the Air Forces Sub-Commission on 1 March 1946.

4. On 12 March a letter was directed to the Mediterranean Air Allied Committee by the Air Forces Sub-Commission for a decision and recommending that the question was one which should be determined by the Italian Government and not by the Allied Air Forces Headquarters.

2--

5. Concurrence of this recommendation was received from the Mediterranean Air Committee by the Air Forces Sub-Commission on 8 April 1946 and they in turn notified the Italian Air Ministry on 13 April 1946 that the matter had been examined by higher Allied authority and that it had been decided that the construction of the crossing was a matter that should be settled by the Italian Government.

6. Also the Electrical Division of Industry and Utilities Branch had been consulted on the matter, due to the fact that it involved electric power and it, in turn on 24 April 1946, notified the Compagnia Nazionale Elettrica, which is the Italian power company which will own the crossing when completed, that the matter had been examined by Allied authorities and was considered to be a matter which should be determined by the Italian Government.

7. The only part, therefore, that Allied Commission has taken has been in response to a request from an Italian Government Ministry to determine whether the Allies had any objection to the crossing and after due consideration the Allied authorities decided they had not interest in the matter.

8. As to delay on the part of the Allies, the attached resume of correspondence would indicate slow action at times but nothing that would warrant the claim made in the newspaper article. Allied Commission was then going through personnel reduction and at the same time was handling many problems.

9. Without disclosing the purpose of the request, on 21 June 1946, inquiry was made of the General Manager of the "GONDEL" Company which is developing the project and will own the crossing when finished. His statements are attached which indicate that:

- (a) "GONDEL" are endeavoring to obtain the special conductor from America.
- (b) The project was designed by the "GONDEL" staff.
- (c) That several contractors have been consulted on the construction, but no definite agreements have been made.

10. In conclusion therefore the statements made by Rizzo Co. do not agree with the facts as far as Allied Commission is concerned.

JOHN W. LAUGHLIN
Major, G.E.
Acting Deputy Director

ELECTRIC CABLES - STRAITS OF MESSINA.

1. Information has been received from the Italian Air Ministry that the Italian Government are faced with the problem of establishing electric power lines between Sicily and the mainland before the coming winter sets in.
2. As the Government has been unable to obtain submarine cable for the project they are proposing to erect six overhead cables across the straits of Messina. The height of the two pylons carrying these cables will be 800 ft. and the height of the cables above the sea about 200 ft. A sketch of the lay out of the project is attached.
3. This project is considerably more costly and less efficient than if submarine cables were used. Moreover the cables will constitute a menace to aviation in this important and ill-weathered airway. Nevertheless the Prime Minister has turned down the Italian Air Ministry's protest on the grounds that getting the circuit to Sicily is more important.
4. In view of the threat to the safety of both Allied and Italian aircraft constituted by this project it is requested that investigation may be made into the possibility of making submarine cables available for purchase by the Italian Government.

SUBJECT : Electric power lines between
Sicily and Mainland

TO : Economic Section
(Attn.: Col. Walton)

FROM : Industry Department.

1. An investigation into the subject of overhead
vs underwater cable for power connection between Sicily and
the Mainland has been made and we submit the following
information:

a. The question at issue is not one of
availability of cable, as the cable used in this job would
have to be made to rigid special specifications and designed
for this job alone.

b. There are few firms in the world capable of
making this cable. Among these firms Pirelli of Italy is one
of the leaders and should be the one picked for the job.

c. Because of stringent underwater current
conditions, and, because of the very rugged condition of
the sea bottom at the location over which this cable must
pass engineers of Pirelli, the utilities companies etc.,
after a few years study, have concluded that no cable
would give satisfactory service at this point.

d. Based on the above study the plan of the
overhead cable was devised.

2. In view of the above, the subject does not
become a question of obtaining available cable in the
United States.

3. Any decision in this matter should be obtained
through the Ministry through competent engineering advice.

7/19

weighing the relative importance of both advantages and disadvantages of this overhead cable against the under-water cable.

FROM : Air Forces Sub-Commission,
Allied Commission, Rome.

TO : Mediterranean Allied Air Committee
Secretariat.

Date : 12 March 1946

REF. : AFSC/AS/ADM.

Subject: Construction of Six Overhead
Cables Across Straits of Messina.

1. The Italian Air Ministry has asked this office to ascertain whether or not the Allied Forces Headquarters has any objection to the construction of the six overhead cables across the Straits of Messina.
2. The Italian Air Ministry has objected to the project in a wild manner, due to it being a hazard to aviation.
3. The undersigned believes that the advantage to be gained outweighs the disadvantage of it being a flying hazard, and therefore recommends that the construction be allowed.
4. For your information, a copy of a letter received by the Executive Commissioner from the Economic Section is attached. This letter gives the reasons why an overhead cable is desired.
5. The undersigned believes this is a question that should be settled by the Italian Government and not one to be settled by the Allied Forces Headquarters.

21 June 1946

Note: Following information obtained by phone from Eng. Silva, General Manager of the "Compagnia Nazionale Imprese Elettriche" "CONIEL" which is developing the proposed 220,000 volt main transmission trunk line down the middle of Italy and which will be the owner of the Messina Straights crossing under discussion:

1. The Italian Ministry of Aviation made some opposition to that project in view of possible danger to air communications. Eng. Silva then stated that all possible technical measures would be taken by "CONIEL" to avoid trouble to airplanes.

Following that, the Italian Ministry of Aviation informed "CONIEL" that, if no opposition were made by Allied Air Forces, the project could be carried out with no opposition from Italian Aviation.

2. The project requires one year for its completion, but no work has so far been done due to difficulty of providing the special steel conductor required. It seems that the Italian Firms are not able to manufacture that conductor, at present "CONIEL" is in contact with some American Firms and they are quite confident to get it through.

3. The design has entirely been made by "CONIEL" staff.

4. Italian contractors will be engaged with the tower erection works; several firms have been contacted, but nothing definite has so far been made.

5. One of the principal Italian firms who could construct this crossing is the "Dalsino" which has constructed high transmission lines in Italy, in the past."

"THE U.K. CROWDING U.S. OUT OF ITALY"

Rizzo Says Market is Being Lost on
State Department's 'Hands Off Policy'

- - -

1. British influence on the Allied Control Commission in Italy is largely responsible for the continued limitation of trade between the United States and that country, J. F. Rizzo of Joseph F. Rizzo & Co., manufacturers' export representatives, Philadelphia, charged yesterday at a meeting of the Export Managers Club, at the Hotel Pennsylvania. Mr. Rizzo, who recently returned from a visit to his company's offices in Italy, asserted that United States State Department representatives in that country told him that they had been ordered "by Washington to keep hands off Italian politics, and hands off Italian industry".
2. "Our Allies are picking up control of the markets of the best Italian industries for their own use and we get no help from Washington," he declared.
3. Stating that he intended no criticism of Allies of the United States, but to declare his "admiration" and to emphasize their constant determination to push their trade, Mr. Rizzo said that the British were insisting on full control of the output of certain textile mills in return for supplying raw materials. Italian exports to Britain, Sweden and Switzerland, since the cessation of hostilities, have been greatly in excess of shipments to the United States, he declared, adding that "a weapon is to impede Italy from building up dollar balances in this country".
4. The Italian people, however, are anxious to obtain American goods, since the war has made them aware of their superiority over the domestic, German and other foreign products to which they had become accustomed, he said. Practically everything in Italy today, Mr. Rizzo asserted, is of American manufacture, "and even the most humble citizen knows and wants American merchandise".
5. Outlining his charges of discrimination against the United States, Mr. Rizzo asserted that he had seen cases of American Lend-Lease goods, stenciled with the slogan "Britain Delivers the Goods", while in Italy, he said, he had urged that a campaign be undertaken to break the black market there by flooding it with manufactured goods, "but the Allied Commission reasoned that the black market was salutary".
6. American-made tractors were made available for sale to Italian farmers at \$700 each, "and then somebody in the Allied Commission suggested that they set the price at \$2,200 each, with the result that the tractors "rusted in warehouses", Mr. Rizzo charged.

7485

- 2 -

7. His own company undertook to build a power line across to the straits of Messina but was refused permission to erect towers on the grounds that they constituted a hazard to air traffic. Authorities, whose ranking member, "as usual," was British, also demurred when it was proposed to lay a submarine cable, Mr. Russo complained. Since that time, he said, it has been learned that a British company has become interested in the project and "the towers are no longer a hazard".

SUBJECT: Investigation of Sicilian
Thermo-electro power plants.-

6th October 1945

1. Following our note n. 3749 dated 23rd September 1945 with which this Administration informed you as regards the supply of coal to Sicilian Thermo-electric power plants in Sicily we inform you that this Ministry has decided to effect an investigation of the power plants so as to examine:

a) The conditions of all the vapor generating equipment, of the turbo-alternators, and all the relative machinery and equipment.-

b) Up to what maximum the use of coal in Sicily may reach following a subsequent reactivation.-

c) What action has the company taken for repairing their equipment, and what other measure, in the Commission's opinion it would be necessary to take.-

d) Whether the Electrical Company has been careless in the maintenance and running of the plant.-

e) What solution has been proposed or might be proposed for the final settlement of the problem of producing electric power in Sicily.-

2. For this purpose an investigation Commission has been appointed of whom the following persons are members:

- President

Prof. Francesco ROMA, Professor of
Special Technology at the University

THEIR SELLER NO. 2334

LUDWIG Investigation of Sicilian Thermo-electric power plants.-

5th October 1945

1. Following our note of 27th September 1943 with which ~~the Ministry informed you~~ you are informed that the Ministry has decided to carry out investigation of the power plants so as to examine:

 - a) The conditions of all the vapor generating equipment, of the turbines, and all the relative machinery and equipment.
 - b) Up to what maximum the use of coal is likely to reach following a subsequent reactivation.
 - c) What action has the company taken for repairing their equipment and what other measures, in the Commission's opinion it would be necessary to take.
 - d) Whether the Electrical Company has been responsible in the maintenance of the interruption of the plants.
 - e) What solution has been proposed or might be proposed for the final settlement of the problem of producing electric power.

2. For this purpose an investigation commission has been appointed of whom the following are members:

16 October 1945

Subject : Air Transportation of Società
Generale Elettrica della Sicilia Engineers

To : ALLIED COMMISSION LIAISON OFFICER, PALERMO

(29)

1. An officer of the Public Works and Utilities Sub-Commission has received a letter from Ing. Alfonso Modica, Chief Engineer of the Società Generale Elettrica della Sicilia, asking assistance in obtaining airplane passage from Palermo to Rome and return for himself and another engineer of the electric company. He has explained that the two have business here in Rome in connection with their company.

2. Eng. Modica is being referred to your office to inquire into the possibilities of obtaining airplane passage. No attempt is being made to evaluate the importance of his request, since details of the reasons for his visit are not known here. However, it is pointed out that in the past, many instances are known of outstanding co-operation of the Società Generale Elettrica della Sicilia, with Allied authorities and previous requests known here to have been made by the company have been reasonable. In the event that need for the engineers' trip to Rome is apparent and that space is available, it is recommended that consideration be given to arranging for their travel to Rome and return by plane.

Subject: Coal supply to Sicilian Industries - Sicily
26
1. Your Inter Office Memo 150/CD dated 24 Sept, 1945 is acknowledged.

2. This memo has been prepared to answer in detail the points in your letter, which it is understood is based upon statements furnished by the Soc. Generale Elettricità della Sicilia. The whole question has been discussed on numerous occasions, in correspondence between this HQ and the Ministry of Industry and Commerce, the Ministry of Transport and even the Prime Minister. The short answer is that this HQ is not prepared to indicate the quantity or very the quality of the importation of coal into Sicily.

3. For your information, you should note that:-

- (a) Sicily receives 21,000 tons per month of coal, 16,000 Imported and 12,300 tons Sardinian, which is more than was imported in some years before the war.
- (b) Month by month the quantity has, since about Oct. 1943, been imported regularly with ample stocks. Conclusion is therefore contains a civilian statement of the usual Sicilian Inaccuracy in regards to which we have become accustomed.
- (c) As a consequence, while in some months the consumption for Electricity purposes was less than normal, a reserve stock should have been built up. Distribution however has been ~~unrestricted~~, and the quantity thus freed was probably used for other and unauthorized purposes.
- (d) The plants to which Sardinian coal is sent were constructed 1933-1934, dating from the time when an original survey, by U.S. and British engineers was made in January 1944.
- (e) Conclusion 2 can definitely be attributed to the same class of civilian statement as Conclusion 1. The military importance of Sicily today is most precisely nil and the military establishments are negligible, if not non-existent. The statement that coal complaints do not receive, have been from military sources, is manifestly incorrect even for a civilian source.

2. This Division is not prepared to answer in detail the points in your letter, which it is understood is based upon documents furnished by the Gov. Generale Sicilia. The whole question has been thrashed out on numerous occasions, in correspondence between this HQ and the Ministry of Industry and Commerce, the Ministry of Transport and even the Prime Minister. The short answer is that it is not prepared to discuss the quantity or very the quality of the importation of coal into Sicily.

3. For your information, you should note that:-

- (a) Sicily receives 21,000 tons per month of coal, 16,000 imported and 15,000 tons Sardinia, which latter was imported in some years before the war.
- (b) Month by month the quantity has, since about Oct. 1943, been imported regularly with ample stocks. Conclusion A therefore contains a Sicilian statement of the usual Sicilian Inaccuracy in respect to which we have become accustomed.
- (c) As a consequence, while in some months the consumption for Electricity purposes was less than normal, a Reserve stock should have been built up. Distribution however has been inefficient, and the quantity thus freed was probably used for other and unauthorized purposes.

- (d) The plants to which Sicilian coal is sent were established 7th Feb., dating from the time when an original survey, by U.S. and British engineers was made in January 1944.
- (e) Conclusion E can definitely be attributed to the new class of Sicilian statement as Conclusion A. The military importance of Sicily today is most probably nil and the military establishments are negligible, if not non-existent. The statement that "all consignments so far received, have been from military sources" is neitherly in its inaccuracy even for a Sicilian source.

4. The quantity of Sicilian coal is a matter for the attention of the Italian Government, as is also henceforth the quantities authorized to be imported into the Islands. The advice of this Division would, however, as indicated in para 2, be directed to ensure an improvement in distribution, and especially against any increase of quantity.

24 Sept 45

Subject: Coal Supply to Societh Generale
Elettrica della Sicilia.To : Industry Sub-Commission,
attention : Coal Division.
From : P.Wks.& U. Sub-Commission.

(24)

1. In message No. FX 43261 dated 14 Sept 45, AFHQ reported troubles with the electricity supply in Sicily, allegedly because of fuel difficulties. An inquiry has been made, and from statements furnished by the Societh Generale Elettrica della Sicilia, the electric company involved, the conclusions and recommendations contained hereunder have been reached. In order that the Public Works and Utilities Sub-Commission may prepare an answer to message No. FX 43261, mentioned in the foregoing, your comments in this memorandum are requested as soon as possible.

CONCLUSIONS

A. The total quantity of coal received in Sicily during the period 1 January - 31 August has been less than the amount allocated. In consequence, the quantity of coal received by the electric company has been 16 percent less than the allocation figure.

B. As a result of the Sicilian fuel shortage, the electric company has used the maximum possible amount of water from the storage reservoirs of the hydroelectric plants. Consequently, the reservoirs are now very low. The lack of rain has sharpened the acuteness of the situation. In August 1945, the amount of hydro generated energy was only 62 percent of the figure for October 1944, traditionally the month of smallest hydro production.

C. Some of the fuel burning equipment in the Sicily thermal plants can not operate with Sardinian coal alone, but can function with a mixture of Sardinian and imported coal. Consequently, the monthly fuel

7471

7471

allocations are composed of definite proportions of Sardinian and imported coal. Actually, however, coal has not always been received in the proportions needed, and sometimes steam plant operation have been impeded as a result, although some Sardinian coal has been on hand.

D. Even though Sardinian and imported coal can be mixed and burned, the use of Sardinian coal in equipment not especially designed for it forces frequent outages for repairs.

E. Recent shipments of Sardinian coal have been very difficult to burn, because of the small size of the coal, and the foreign matter mixed with it.

F. The shortage of electricity in Sicily is affecting military establishments, and all complaints so far received here have been from military sources. The use for electricity for domestic purposes is and has been controlled by the scheduled disconnection of areas.

RECOMMENDATIONS

A. That the Sardinian coal, furnished in the future, be clean, and not be of small size ("siftings").

B. That every effort be made to furnishing at least the allocated quantities of fuel to the electric plants in Sicily, (7500 Tons Sardinian; 300 tons imported) and that the proportion of imported coal be increased, if possible.

C. That consideration be given to increasing the allocation to the electric company, to a total of 15,000 tons, permitting a total monthly generation of 9.5 million kilowatt-hours during the remaining months of the year, when hydroelectric production will be low. (Furnishing 15,000 tons during the four last months of the year, would not result in the

total quantity of coal received during the year exceeding the allocated figure).

TOTALE	121.760	127.884	124.996	3.288	2,50	%			109.480	72.826	69.040					

Dal quadro si rileva che il carbone arrivato è stato in quantità leggermente superiore a assegnato per quello estero, ma sensibilmente inferiore (circa il 70% del previsto) per quello nazionale. Si rileva pure che gli sfridi di manipolazione (differenza tra il peso segnato nella polizza di carico ed il carbone realmente consegnato agli utenti) sono risultati maggiori di quelli dello stesso anno dell'1,5% circa. Il fenomeno è certamente spiegabile dalle condizioni diverse cui si svolge tutto il servizio.

Si nota che gli sfridi risultano più alti per il carbone nazionale che non per l'estero, che fa pensare ad irregolarità nei porti di carico.

Risulta dal quadro che di carbone estero se ne sono avuti tonn. 3.236 in più dell'assegnato, mentre di nazionale se ne sono avuti tonn. 40.440 in meno. In totale si sono avuti tonn. 37.204 in meno dell'assegnato.

Il carbone arrivato è stato distribuito secondo quanto risulta dai seguenti prospetti che riferiscono il primo al carbon estero, il secondo al carbon nazionale.

risulta che tutti gli utenti hanno avuto il carbone loro assegnato, le Ferrovie stabilite, la Generale Elettrica in quantità superiore, le stesse le grandi

e le piccole industrie, mentre notevolmente inferiore è stata la fornitura alle usine del ghiaccio, il resto hanno incominciato a funzionare solo da qualche mese. Delle maggiorazioni di cui è sensibile quella delle piccole industrie che hanno avuto una fornitura di 5.427 tonn. di carbone, ad un assegno di 3.760. E' infine da considerare che per bisogni non previsti è stata fatta una fornitura di 1.863 tonn.

E' da tenere presente che la maggiore fornitura di carbone estero è in relazione alla fornitura di nazionale di cui appresso.

Dall'esame del quadro C. si rileva che il carbone fornito è stato dato a tutti gli utenti, pura sensibilmente inferiore a quella assegnata.

La Generale Elettrica, ha avuto una fornitura uguale al 2/3 dell'assegno, le grosse industrie circa la metà, e così via. Anche per il carbone nazionale si è avuto un consumo di circa 2.000 tonnellate, per bisogni non previsti (Forze Alleate, Forze Italiane e varie).

L'esame dei due quadri, nel complesso, dimostra che il carbone è stato diviso egualmente fra gli utenti.

Le cause del disagio gravissimo in cui si trova la Sicilia per la deficienza del carbone sono conseguenze risentite in maniera grave da tutta la popolazione dell'Isola, stanno nel fatto che l'assegnazione è insufficiente e con essa non si può provvedere agli imprescindibili bisogni della regione.

Causa grave del disagio è pure quella che il carbone nazionale, per le sue caratteristiche, è spesso inutilizzabile ed esso può anche restare in parte accantonato, senza uso, mentre le imprese della Generale Elettrica debbono fermarsi per mancanza di carbone estero. Deve perciò essere aumentata l'assegnazione e deve essere notevolmente aumentata quella del carbone estero.

Scendendo poi all'esame dei consumi delle due più forti e più essenziali aziende consorziate, ovvero la Generale Elettrica, osserviamo quanto appresso:

3

re notevolmente inferiore è stata la fornitura alle usine del gas che, so a funzionare solo da qualche mese. Delle maggiorazioni di cui sopra piccole industrie che hanno avuto una fornitura di 5.427 tonn. di fronte infine da considerare che per bisogni non previsti è stata fatta una for-

Agosto	9.000	350	9.350	4640	8.505	352	8.857		352	8.857	40
Totali	72.000	2.330	74.330	74573	76.105	2.514	78.619		2.514	78.619	4.280

Dal quadro si rileva che la quantità di carbone ricevuta è esattamente uguale a quella stanziata. Vi è stato un maggior consumo rispetto all'assegno di tonn. 4.280 dovuto alle necessità di trarre i reduci e di provvedere a forti trasporti di grano, solfo, asfalti. Questi più intensi trasporti sono verificati nei mesi di aprile, maggio e giugno, ma si è subito cercato di ridurre i consumi. Si è saputo che per il mese di luglio e buona parte di agosto non si sarebbe avuto carbone. Nelle riduzioni del consumo si è avuta comprendendo i traffici ed impedendo trasporti vitali come quelli dei concimi chimici, del cemento, dello zolfo, dell'asfalto e dei materiali di costruzione.

A metà agosto le condizioni delle scorte erano ridotte a limiti allarmanti, cosa che consigliò prima riduzione nei treni viaggiatori meno indispensabili, che fortunatamente poté subire e essere fatta per il nuovo affluire delle riforniture, ripresa dal 18 agosto. Però l'afflusso di carbone è rimasto ed adesso le scorte sono nuovamente arrivate a limiti pericolosi, consentendo una sola settimana di servizio.

4

FERRIVIE

quello consumato nei mesi da gennaio ad agosto risulta dal quadro appresso indicato.
 (Quadro D.)

Consumo carbone per le Ferrovie

che la quantità di carbone ricevuta è esattamente uguale a quella stabilita, somo rispetto all'assegno di tonn. 4.280 dovuto alle necessità di trasportare a forti trasporti di grano, zolfo, asfalti. Questi più intensi trasporti si aprile, maggio e giugno, ma si è subito cercato di ridurre i consumi quando di luglio e buona parte di agosto non si sarebbe avuto carbone. Naturalmente si è avuta comprimendo i traffici ed impedendo trasporti vitali per l'economia dei concimi chimici, del cemento, dello zolfo, dell'asfalto e dei materiali da

ioni delle scorte erano ridotte a limiti allarmanti, cosa che consigliò una viaggiatori meno indipensabili, che fortunatamente poté subito essere revoca alle riforniture, riprese dal 18 agosto. Però l'afflusso di carbone è stato mino nuovamente arrivate a limiti pericolosi, consentendo una sola settimana di

E' da tenere conto che la sospensione della rifornitura da luglio alla seconda quindicina portò conseguenze più gravi perchè nello stesso periodo poterono avermi tonn. 6.104 di carbone, portato a bordo dal piroscafo "Empire Moon", affondato presso Siracusa durante il periodo bellico e ricuperato in

Come ripetutamente fatto presente l'assegnazione attuale di 9.000 tonn. mensili per le Ferrovie può consentire di effettuare il grado servizio minimo che attualmente si disimpegna e che il servizio viaggiatori che per la maggior parte delle linee prevede l'effettuazione, due volte la sola coppia di treni e per il servizio merci il trasporto dei generi alimentari, del materiale Continente e che vi si avvia e di limitate partite di vino, di solfo, di asfalto e di materiali

Si torna a ripetere che per disimpegnare il servizio merci così come è richiesto dall'economia bisognerebbe aumentare l'assegno di altre 3.000 tonn. al mese e che per portare il servizio viaggiatori che sarebbe strettamente indispensabile per un paese civile (una sola coppia al giorno per tutti pochi treni locali, per servire i principali centri) occorrerebbe ancora altro aumento mensile di combustibile.

E' poi indispensabile che le scorte vengano riportate ad una efficienza tale per cui ritardo dell'arrivo dei rifornimenti non debbano rendere possibile la sospensione parziale o totale del servizio. In fine occorre un'assegnazione straordinaria di 10.000 tonn. di carbone.

SOCIETA' GENERALE ELETTRICA DELLA SICILIA

L'assegnazione attuale di combustibile per la società risulta dai quadri B. e C. ed è di 11.500 tonn. al mese. di importazione e 7.800 di nazionale, totale tonn. 11.500 al mese.

Con questi quantitativi si possono produrre circa 7.500.000 di kWh mensili con le tre centrali di Porto Empedocle e Catania.

Si è insistito perchè nella situazione attuale di deficienza di produzione idrica per la metà di quest'anno, la Società fosse messa in condizione di utilizzare al massimo la possibilità delle centrali termiche per compensare in buona parte la deficienza della produzione idrica.

Per questo si era chiesto che l'assegnazione di carbone venisse portata a 15.000 tonn. di carbone di importazione.

Potrebbe in tal modo portare la produzione termica mensile a 9.5 + 10.000.000 di kWh.

Dati però i gravi inconvenienti che si sono verificati in questi ultimi mesi con l'uso di carbone sardo non solo hanno compromesso e comprometterono seriamente la continuità del servizio ma che recano danni alle caldaie, per tutto quello che si dirà in dettaglio in seguito, occorre che si riduca al minimo il consumo di carbone sardo aumentando corrispondentemente la quantità di carbone di importazione.

5

che la sospensione della rifornitura da luglio alla seconda quindicina di agosto non
ravi perchè nello stesso periodo poterono avversi tonn. 6.104 di carbone, ricevate dal
affondato presso Siracusa durante il periodo bellico e recuperato in luglio scorso.

fatto presente l'assegnazione attuale di 9.000 tonn. mensili per le Ferrovie delle Sta-
fettuare il grano servizio minimo che attualmente si disimpegna e che consiste in un ser-
vizio la maggior parte delle linee prevede l'effettuazione, due volte la settimana di una
per il servizio merci il trasporto dei generi alimentari, del materiale che arriva dal
avvia e di limitate partite di vino, di zolfo, di asfalte e di materiali da costruzione.

che per disimpegnare il servizio merci così come è richiesto dall'economia dell'Isola
l'assegno di altre 3.000 tonn. al mese e che per portare il servizio viaggiatori a quello
indispensabile per un paese civile (una sola coppia al giorno per tutte le linee e più
servire i principali centri) occorrerebbe ancora altro aumento mensile di altre 3.000 tonn.

ile che le scorte vengano riportate ad una efficienza tale per cui ritardi eventuali nel
ci non debbano rendere possibile la sospensione parziale o totale del servizio. A questo
azionale straordinario di 10.000 tonn. di carbone.

SOCIETA' GENERALE ELETTRICA DELLA SICILIA

ale di combustibile per la società risulta dai quadri B. e C. ed è di tonn. 3.700 di car-
.800 di nazionale, totale tonn. 11.500 al mese.

ativi si possono produrre circa 7.500.000 di kWh mensili con le tre centrali di Palermo,
11.500.000 / 7.500.000 = 1.53 cifra h.

ché nella situazione attuale di deficienza di produzione idrica per la eccezionale magra
rà fosse messa in condizione di utilizzare al massimo la possibilità di prestazione del-
compensare in buona parte la deficienza della produzione idrica.

richiesto che l'assegnazione di carbone venisse portata a 15.000 tonn. di cui almeno 6.000
stazione.

do portare la produzione termica mensile a 9,5 + 10.000.000 di kWh.

Inconvenienti che si sono verificati in questi ultimi mesi con l'uso del carbone sardo che
esso e compromettono seriamente la continuità del servizio ma che recano gravi danni anche
quello che si dirà in dettaglio in seguito, occorre che si riduca al minimo la quantità di
corrispondentemente la quantità di carbone di importazione.

Si è notato che le forniture più recenti di carbone sardo sono peggiorate in qualità
che è aumentata la percentuale di fino e per il fatto che il carbone contiene molti corpi
fino perchè le ceneri hanno un punto di rammollimento molto basso.

L'aumento della percentuale fino reca seri fastidi sulle griglie a catena che hanno
carbone magnum vagliato.

I corpi duri contenuti nel carbone hanno recato seri fastidi nei mulini del carbone
negli alberghi serianamente specialmente quelli di Catania.

Negli altri lo stesso sardo che è molto più duro degli altri carboni determina dei
parti macinanti e riduce la producibilità dei mulini.

Siccome il potere calorifero del carbone sardo è notevolmente inferiore a quello dei
carboni normali si riduce fortemente e per doppia ragione la prestazione di ogni singola unità.

Infine l'ultimo inconveniente lamentato è cioè il fatto che le ceneri del sardo ram-
mollite dalla calore delle camere di combustione, oltre a far perdere una parte di combustibile che viene
rannollite, provoca gravi danni alle griglie e alle murature.

A Catania si sono dovute lamentare proprio in questi ultimi giorni inconvenienti ch-
e re fuori servizio intempestivamente due caldaie.

Si allega al riguardo una interessante relazione inviata dall'ing. di quelle centrali.
Intanto proprio adesso la società è più che mai in gravi difficoltà a causa delle

Al giorno 8 settembre la situazione era la seguente:

A Porto Empedocle 81. tonn. di carbone estero il che vuol dire che se si dovesse chiudere
attualmente in servizio che funziona con sardo, dopo un giorno si sarebbe costretti a

A Palermo si è andati avanti con carbone fornito dal deposito locale delle Ferrovie
elettriche che il piroscalo di estero annunciato per il giorno 5 per Palermo non arriverà per-
che le ferrovie hanno sosospeso il prestito. Pertanto la Centrale fermerà entro il 10 corrente.

A Catania ci sono 163 tonn.

Come si vede la situazione è molto grave.

Si è in attesa delle assegnazioni di estero per il mese di settembre mentre, non
giunge spettante per il mese di agosto.

Per tutto quanto detto si insiste perchè, almeno per questi mesi prossimi,
1) venga aumentata l'assegnazione mensile di carbone alla Società Generale Elettrica
2) i quantitativi assegnati arrivino con regolarità
3) si porti al massimo l'assegnazione di buon carbone d'importazione riducendo o meglio
assegnazione di carbone sardo.

6

niture più recenti di carbone sardo sono peggiorate in qualità e per la pezzatura per-
quale di fino e per il fatto che il carbone contiene molti corpi estranei pietrosi e in-
tro un punto di rammollimento molto basso.

ing the inevitable requirements of the island.

The bad quality of manganese coal which in some ~~years~~ cannot be employed; ships of the British Electric Co are ~~now~~ often out of service for shortage of scheme should be revised and more imported coal allocated.

coal consumption of the largest ~~other~~ consumers (State Railways and Electric Co)
(see pg. 4)

The amount of coal received is identical ^{To} with the allotment. The higher consumption over allotment is due to transport of war veterans as well as sulphur, corn, transport took place in April, May, and June but steps were immediately taken in order to prevent that no coal would be received in July and nearly all August, the traffic essential transports (fertilizers, cement, sulphur, asphalt and building material) amount of coal ^{was} extremely small and a reduction was necessary on the railways. he revoked short time after, following new coal supply received on August 13. and now the storage is very small and will only allow for ~~one~~ another week of operation.

It must be remembered that when the coal supply was discontinued from July until Aug
 1943, coal could only be provided utilizing 6104 Tons of coal salvaged from the ships
 had been sunk during the war.

~~Also~~ Also the 9000 Tons allocated to State Railways can only permit a very poor
 passenger train twice a week (on nearly all lines) and plus goods transport of goods, traffic with com-
 munal, asphalt and building material).

A sufficient goods traffic requires 3000 more Tons of coal per month and a
 in passenger trains (one pair a day) requires another 3000 Tons a month.
 on all lines
 plus local services

Also the reserve storage should be restricted to provide for possible delay in the
 This could be obtained by means of an emergency allocation of 10,000 Tons.

Società Generale Elettrica della Sicilia

Current allocation is shown in Table B and C (3700 imperial + 7800 medium = 11500
 permitting a production of 7.5 millions mWh per month from the steam plants (Palermo, Pto Zm
 It had been requested that the allocation be increased to 15,000 Tons in order to compensate
 production due to abnormal dry weather. 9.5 - 10 millions mWh could then be produced.

(page 5) in the coal supply was discontinued from July until August 18; ^{more} ~~several~~ ^{days} utilizing 6104 Tons of coal salvaged from the ship "Empire Moon" which

(4)

allocated to State Railways can only permit a very poor service (as one pair of
and plus ~~good~~ ^{more} transport of goods, traffic with continental Italy, ^{to} wine,
duty material)

ii (a day) requires another 3000 Tons a month.

line
local service

should be restored, to provide for possible delay in the delivery of coal, and
by means of an emergency allocation of 10.000 Tons.

Società Generale Elettrica della Sicilia

Table B and C (3700 imported + 7800 medium = 11500 Total Tons/month)

5 millions MWh per month from the steam plants (Palermo, ^{1/2} Enna, Cefalù, Catania)

an allocation be increased to 1500 Tons in order to compensate for the insufficient hydroelectric
dry weather. 9.5 - 10 millions MWh could then be produced.

It is necessary on the other hand that the amount of sodium coal be reduced to a minimum at the same time the delivery of impacted coal, due to serious trouble encountered in the steam plants with sodium coal (outages, damage to boilers)

The most recent deliveries of sodium coal are still work (more fine grain coal, stones, at low temperature) and provide trouble to the grates stokers.

Coal crushers are also damaged by stones mixed with coal as well as by the ~~stone~~ ^{heat} operation. Considering now that the BTU ^{contents} of sodium coal ~~are~~ lower than on impacted coal, seen that the efficiency of all units is considerably affected.

Damage to stokers and masonry refractories are due to the melting of the ashes or provides a form of fuel which is incorporated in the ashes.

Serious troubles were recently reported at Calumet and two boilers were put out of service (affidavit report of the chief engineer, with pictures) - difficulties are now experienced

The situation on September 8th, was as follows.

- a) At 81 tons of impacted coal at \$16 Impedite (that means if maintenance work should be done operating with sodium coal, the station would be out of service ~~as~~ after 1 day)
- b) Calumet Station was operating with coal supplied from the local Railway storage - the been discontinued following the information that the ship carrying impacted coal will

that the amount of sodium coal be reduced to a minimum, increasing
 of unpeated coal, due to serious trouble encountered in the operation of
 coal (outages, damage to boilers) (5)

sodium coal at all times (more fine grain coal, stones, a low melting of ashes

ACTION

1; CINCMED reports that failures in supply of electric power from CATANIA Power Station to naval dockyards in SICILY are occurring 6 to 8 times daily. (Ref your 5018 to SNO ESY). Reason is stated to be unduly high proportion of dust and very small coal in allocations of coal made locally to power station.

2. Request you take this up with AC PALERMO and report results. If this is not the reason suggest that Italian Govt be asked to send expert to SICILY to investigate causes of failure and institute remedial action.

SUBJECT: Removal of Societa Generale Elettrica
della Sicilia Turbine to Naples.

TO : Italian Ministry of Public Works,
Attn: Prof. A. Asta.

23

1. Transmitted herewith for your information is a copy of a memorandum signed by the parties concerned, and relating to the movement of a 3,500 KW turbine generator from Piedimonte d'Alife to Naples. This machine is the property of the Societa Generale Elettrica della Sicilia, and was formerly installed in the Alto Belice Plant of the Generale Elettrica Company. It was removed from the plant in the Spring of 1944, and transported to Italy, by order of the Central Electrical Board, a military agency of Allied Armies in Italy.

2. The original intention was to place the unit in operation at the site of the demolished Matese II Plant. The scheme was not carried out however, and the machine was subsequently stored at Piedimonte d'Alife. The Societa Generale Elettrica della Sicilia requested the assistance of the Electrical Division in transporting the unit back to Sicily. Help was obtained from military sources in the form of a large truck and necessary road repairs, and late in August 1945 the equipment was moved to Naples from where it can be carried by rail or sea to Sicily. The Electrical Division will endeavour to assist, informally, in arranging for transportation from Naples to Palermo if necessary; however that territory is now under Italian Government jurisdiction, and the Generale Elettrica Company should first try to obtain transportation through the normal sources.

3. The machine was removed from the Alto Belice plant by personnel of the Societa Generale Elettrica della Sicilia, under the general supervision of Lt-Col. V.S. Bentin and Tech.Sgt. A.M. Anzivino of the Allied Commission. Complete cooperation was given by the company.

Due to extreme drought practically all hydroelectric plants in SICILY are inoperative. Last thermal electric plants burn coal and are operating only at loss of efficiency due to lack of coal or low quality Sardinian coal furnished increased in utilization diesel or could take some load off electric company because some ice and other plants have alternate diesel power supply and could use local diesel generated power in lieu of power from electric company. City of CATANIA now without electricity due to lack of coal. Imperative that quantity and quality coal supplied SICILY be increased as soon as possible. Situation slightly different from north due to drought which is worst in many decades. Living conditions not good will be worse unless relief is given power company on which no many industries and municipalities depend. Recommend ALLIED COMMISSION take immediate measures to correct situation. The urgent need is now and until some days after rains come.

1. Reference is made to your Inter Office Memorandum dated 14 July, File NSC/2939, Subject: Electricity supply to Messina.

2. Lieutenant Commander T.G. Proctor did visit offices of the Public Works and Utilities Sub-Commission on 16 July 1945; his visit resulted in the following:

a) - The Coal Division, Allied Commission reported that the Island of Sicily is receiving its regular allocation of coal.

b) - The Ministry of Public Works were instructed by the Public Works and Utilities Sub-Commission to notify their Sicilian representative that essential facilities, such as the Messina Dockyard and associated works, must receive a continuous supply, and that electricity rationing must be done at the expense of less important uses. Furthermore, instructions were given stating that non-essential load must be reduced to the point where normal systems frequency can be maintained.

c) - Lieutenant Commander Proctor reported that he was going to endeavour to locate boiler tubes which would be suitable to make repairs to the Catania boilers.

3. It is expected that the action as outlined in sub-paragraph 2b of the foregoing will remedy the condition. In the event that the improvement is not sufficient, this Sub-Commission would appreciate being informed.

7445

SUBJECT: ELECTRICITY SUPPLY TO MESSINA.

FROM THE SENIOR NAVAL OFFICER, EASTERN SICILY, MESSINA.
(The Commanding Officer, H.M.S. "HAMILCAR").

DATE 7th July, 1945.

No. A9/7/373.

TO THE VICE ADMIRAL, MALTA AND CENTRAL MEDITERRANEAN.

RECEIVED (Copies to:-

The Commander-in-Chief, Mediterranean Station.

The Allied Commission, Rome.

Società Generale Elettrica Sicilia,

Direzione Generale, Via Liberta 46, Palermo.)

16 JUL 1945 0524

In recent months interruptions of electricity supply together with low frequency, and at times abnormally low voltage, have impeded work in Messina Dockyard and caused difficulty with essential services in the town.

2. Some improvements have been made following on a meeting with the Societas engineers who are doing their best to assist. The difficulties, however, are considerable and appear, in the main, to be as follows:-

(a) Load is increasing rapidly with general rehabilitation.

{(b)} Water supply at the hydro electric plants is abnormally low and reserves will be used up before the end of the summer.

(c) Coal allocation is insufficient for present loading and the present allocation is not always received, with the result that reserves in the island are diminishing.

(d) Coal supplied is of a very poor quality causing difficulties in pulverisation and combustion.

(e) Steaming capacity at the principal thermal station in Catania is continually being reduced due to lack of boiler tubes for routine replacement.

3. A system of rationing is in operation. The allocation for the Messina district is 65,000 kWh, per day. In order to meet local requirements 30,000 kWh per day are at present being allowed but approximately 90,000 kWh are necessary if essential services in the town are not to be interrupted. In order to meet this requirement alone an increased allocation of 600 tons of coal a month is apparently required.

4. Low system frequency occasioned by overloading results in inefficient operation of dock pumping plants, machine tools etc. It is understood that an increase in monthly coal allocation of 3500 tons to 25,000 tons in conjunction with supplies of boiler tubes is required to rectify this. A total of 1000 tubes is required, 200 urgently. If coal quality were materially improved the increase in tonnage allocation given above could be reduced. This alternative would be preferred by the Societas.

5. The possibility of using fuel oil, which might be more conveniently obtainable than coal, has been investigated but has been found to be

with low frequency, and at times abnormally low voltage, have impeded work in Messina Dockyard and caused difficulty with essential services in the Town.

2. Some improvements have been made following on a meeting with the Societas engineers who are doing their best to assist. The difficulties, however, are considerable and appear, in the main, to be as follows:-

- (a) Load is increasing rapidly with general rehabilitation.
- (b) Water supply at hydroelectric plants is abnormally low and reserves will be used up before the end of the summer.
- (c) Coal allocation is insufficient for present loading and the present allocation is not always received, with the result that reserves in the Island are diminishing.
- (d) Coal supplied is of a very poor quality causing difficulties in pulverisation and combustion.
- (e) Steaming capacity at the principal thermal station in Catania is continually being reduced due to lack of boiler tubes for routine replacement.

3. A system of rationing is in operation. The allocation for the Messina district is 65,000 kWh. per day. In order to meet local requirements 80,000 kWh. per day are at present being allowed but approximately 90,000 kWh. are necessary if essential services in the town are not to be interrupted. In order to meet this requirement alone an increased allocation of 600 tons of coal a month is apparently required.

4. Low system frequency occasioned by overloading results in inefficient operation of dock pumping plants, machine tools etc. It is understood that an increase in monthly coal allocation of 3500 tons to 15,000 tons in conjunction with supplies of boiler tubes is required to rectify this. A total of 1000 tubes is required, 200 urgently. If coal quality were materially improved the increase in tonnage allocation given above could be reduced. This alternative would be preferred by the Societa.

5. The possibility of using fuel oil, which might be more conveniently obtainable than coal, has been investigated but has been found to be impracticable.

6. It is understood that the Societas requirements were reported in detail to the Allied Commission some months ago and that Col. Barber and Col. Oxley are familiar with the position. In view of the importance of electricity supply to the Royal Navy in Messina it is proposed that my representative, Electrical Lieutenant Commander T.G. Procter, RNZVR, should visit Rome in the near future for discussions with Allied Commission, following on which observations by Allied Commission in reply to this letter will be appreciated.

SUBJECT : Electrical plant for Sicily.

TO : Ministry of Public Works
(att: Eng. Asta)

1. During my visit to North Italy the following information was obtained in connection with the electrical plant which the Società Generale Elettrica della Sicilia were enquiring about:-

2. The parts for the turbo-alternator are in Milan and ready to be shipped. They were made in the Swiss works and the Milan works of Brown Boveri have been told not to part with them until payment is made to Switzerland in Swiss francs.

3. It will, of course, be necessary to discuss this matter further with Messrs. Brown Boveri.

SUBJECT : Hydro generating set of Belice.

According to previous information given directly by Ispett.Gen. Elettricità Acque e Gas of the Ministry of Public Works to the direction of this Company, the hydro generating set of Belice plant is available to be moved back to the plant.

The set is stored at Piedimonte d'Alife Railways Station and the Administration of the Comune, following instructions of R.Prefettura of Benevento, is in charge to keep it.

It is necessary for a technical employee of the Company to come to this Office in order to take all the necessary agreements before going to Piedimonte d'Alife and borrow the machinery.

It would be appreciated if the date of arrival of the employee of the Company would be communicated by telegraph.

Napoli, 5 aprile 1945

Alla Società Generale Elettrica della
Sicilia

PAL 27/45

Oggetto: gruppo idroelettrico del Belice.

Giusto quanto già comunicato dall'Ispettorato Generale Elettricità Acqua e Gas del Ministero LL.PP. direttamente alla Direzione Generale di codesta Società, il gruppo idroelettrico dell'impianto del Belice è a disposizione di codesto ente per il ritorno a quell'impianto.

Il gruppo è giacente imballato alla Stazione ferroviaria di Piedimonte d'Alife e l'amministrazione comunale provvede alla custodia a seguito disposizioni della Regia Prefettura di Benevento.

In relazione a quanto significato dal preceduto Ispettorato Generale è necessario che un funzionario tecnico di codesta Società si presenti a questo Ufficio per gli opportuni accordi prima di recarsi a Piedimonte per prendere direttamente in consegna il macchinario dagli incaricati.

Si prega preavvisare telegraficamente il giorno della venuta del funzionario di codesta Società.

SUBJECT: Electricity Sicily.

TO : Ministry of Public Works
(att: Eng. Asta)

1. We understand that the Messina brewery has received notice from the Electricity Company Sicily that a curtailment will be made in the electricity supply to these works.
2. As the product from the Messina brewery is used entirely for distribution to Allied troops, it is requested that you ask the Electricity Company to see that no curtailment of electricity supply is made to this factory.
3. Will you please inform me regarding the arrangements which you make with the Sicilian Electricity Company.

SUBJECT : Drawing of Alto Belice (Casuccio) Turbine

TO : Società Generale Elettrica delle Sicilie

1. Subsidiating our letter dated 21 March 1945, there is transmitted herewith one set of three prints showing details of the Casuccio unit. A careful search has been made to locate the original blueprint obtained by Lt. Col. A.W. Page, but thus far has not been successful. Tracings of the original blueprint were made, however, and were used to produce the blueprints now sent.

2. It is regretted that the original blueprints have been mislaid. If they are located they will be returned immediately. In the mean time, it is hoped that the prints now being furnished will be suitable for your purposes.

R.M. LAPER

REB/RCM : Drawing of Alto Delice Turbine.
TO : APIC, Engineer Section (PW)

1. This acknowledges receipt of one set of blueprints showing details of the Alto Delice Turbine, sent with your letter dated 2 April 1945. Your work in searching for the original prints is deeply appreciated.
2. It is not believed necessary at this time to request information from Lt. Col. A.W. Page concerning the location of the original prints. However, during the time that Col. Page was in this theater, he borrowed a book relating to the Adige-Crespano (North Italy) from Lt. Col. V.S. Denton, this Headquarters. Since this book was borrowed in turn any information as to its present location would be appreciated.

For the Chief Commissioner.

Reference your PWU 150 dated 19 March.

1. A careful search has been made to locate the original blueprint, but it seems that having changed hands several times, it has been mislaid.
2. Tracings were made however, and enclosed are 11 GE Works Drgs 218, 219, and 220, which we think will give all the information likely to be required by the Societa Generale Elettrica della Sicilia.
3. Additional copies of these drawings may be obtained from 170 GE Works and if you wish we will try to contact Lt.-Col. A.W.PAGE in UK to obtain further information about the originals, but this will take some time.
4. It is greatly regretted that the blueprint has been mislaid and when it subsequently comes to light it will be returned to you.

SUBJECT : Drawing of Alto Salice Turbine.
TO : AFHQ Engineer Branch (British)

1. In the spring of 1944, a turbine generator unit was removed from the Alto Salice (Casunno) hydro station, Sicily, for intended installation on the Italian Mainland.

2. At that time, Lt.col. A.W. Page went to Sicily, to study the machine, it being planned that he would supervise the installation in Italy. Later No. 3 District became concerned with installing the machine. While in Sicily, Col. Page borrowed, from the Societa' Generale Elettrica della Sicilia, owners of the machine, a blueprint showing the layout and details of the machine. The electric company has asked if they now might have the print back, it being their only copy.

3. It would be appreciated if AFHQ Engineer Section, No. 3 District, and 170 RE could check their files in an effort to locate the blueprint, so that it might be returned to the Societa' Generale Elettrica della Sicilia.
