AC. PUBLIC WORKS ASPHALT.
Highway Equipment Office.
Florence, Tel. 1525.

TO : 84 C.R.E. Works, Florence.
SUBJECT : Ponte a Buriano Quarry.
REF : AD/7.
DATE : 26 August 1945.

1. To comply with your request I visited yesterday the Ponte a Buriano quarry together with Ing. Agostini, who is the representative of the Genio Civile, for operation of Highway Equipment.

2. Operation of all equipment in the quarry is the responsibility of Signor ALFIO CUNGI; he is paid by U.S.V.S., since July 25th when the Indicatore plant was turned over. He is a capable man and I deem that he is doing a satisfactory work, as foreman of the whole civilian crew. He has a good mechanic EUGENIO BURRONI while Sig. GIOVANNI BANTI is supposed to give some help as an interpreter with the Military personnel and to control the trucks which are hauling materials. He is the Italo-American civilian who was put on this job by a British Corporal of the 276 Wks. Sec. on August 10th; and Genio Civile was supposed to pay him from August 14th on. The Genio Civile is actually paying him but I don't think his activity very valuable in the future.

The contractor ANTONIO MORETTI is only in charge of supplying unskilled laborers and pay them for Genio Civile.

3. On August 25th, the mechanics carried out such modifications of the Primary crusher as requested by the D.C.R.E. and Capt Croft: the moveable jaw plate was tightened and the output of the Primary unit is at present satisfactory, maybe even of a too small size in my opinion; but the stress for both crushers does not seem too high and the amount of fuel needed is now quite normal.

1348

(2)

4. The output is now about 70 cu.mts. per day ; it could be increased if the shovel be used for a longer time than it is used at present (only 3½ or 4 hours per day), because they say that the Military personnel is now ready to work only 1½ hours in the morning (10.00 to 11.30) and 2 hrs. in the afternoon (2.00 to 4.00). And when the shovel is idle, the dumpers are idle too and also the crushers cannot be properly supplied with stone.

5. The 2 mixers, loaned by you to Genio Civile, are in good shape and working. A third one (MF/MG/1226) is idle, because it broke down (the magneto has to be changed) while some belting was used for one of the other two mixers.

Respectfully submitted

For Highway Equipment Officer

REF : AD/7.

DATE : 13 AUGUST 1945.

1. Ref. memor to Ing. CROCETTA dated 27 July 1945 about location of crushing units and quarries to be operated in the future.

2. From Ing. CROCETTA himself, according to Mr. GRIFFITH's instructions, I understood in Rome that only 3 crushing plants, (Primary and Secondary) or at the most 4, will be left for operation in your Compartimento.

3. After investigations and discussions with Genio Civile and contractors, the policy for operation of the crushers was established by the Highway Equipment Officer as follows, according to a report dated 1st August 1945 submitted to Ing. Tizzano by our Liaison Officer:

a) A certain number of proper quarries, where to operate the crushers, will be selected in the areas, so that each quarry will supply about 100 kms of State roads with an yearly output of 20 cu.mts. of stone per km.

b) Each crushing plant will be operated in 4 quarries for about three months per year and will, therefore, supply about 400 kms. of roads.

c) One contractor will operate, on a contract basis, all the quarries, where each crushing unit will be moved throughout one year and be responsible for its maintenance.

4. It is, therefore, requested that a definite plan be prepared of the quarries which might be used in

your Compartimento, in order to submit it to the Highway Equipment Officer for approval together with the names of the contractors proposed for this job.

 Paolo ~~Highway Equipment Officer~~

TRADUZIONE.

1. Con riferimento al promemoria all'Ing. CROSETTA in data 27/7/45 intorno all'ubicazione dei frantoi e delle cave da adoperare nel futuro.

2.) Dello stesso Ing. CROSETTA, secondo le istruzioni di Mr. Griffith, ho appreso a Roma che solo tre impianti di frantumazione (Primerario e Secondario), od al massimo quattro, saranno lasciati per l'impiego nel Vostro Compartimento.

3. Dopo indagini e discussioni con il Genio Civile ed imprenditori, il sistema di gestione dei frantoi è stato stabilito dell'Highway Equipment Officer come segue, in conformità alla relazione in data 1/8/45 trasmessa all'Ing. TIZZANO del nostro Ufficiale di collegamento:

a) Un certo numero di dette cave, dove far funzionare i frantoi, verrà prescelto nella regione, in modo che ogni cava possa provvedere a circa 100 km. di Strade Statali, con una produzione annua di più di 20 mc. per km.

b) Ogni impianto di frantoi verrà impiegato in 4 cave per circa tre mesi all'anno e potrà perciò provvedere a circa 400 km. di strade.

c) Una sola Impresa gestirà, in forza di un contratto, tutte le cave dove ogni stesso frantocio verrà spostato durante l'anno e sarà responsabile della sua manutenzione.

4. Si prega pertanto di provvedere alla compilazione di un piano ben definito di distribuzione delle cave nel Vostro Compartimento dove si possono usare i frantoi, allo scopo di trasmettere il piano stesso all'Highway Equipment Officer per l'approvazione insieme con i nominativi dell'Imprese proposte per tale lavoro.

R E P O R T : Situation Graders

AD/7/32

The graders arrived at Roma Ostiense and there the mechanics of Immobiliare took care of them.

Among the lot one had been damaged (rubber pipes cut). According with the mechanics most had dead batteries, but nobody stated that anyone was missing. = All the tanks were full of oil.=

Later the graders that were supposed to be guarded have been transferred at the Farnesina Yard by the drivers sent by " Immobiliare".

There, in accordance with the statement of the foreman MARTA, ~~some~~ some people took the diesel oil off the tanks of the graders, using a truck to transport it.

Checking the batteries, it has been recently discovered that 16 batteries were missing on saturday 6 May 1945 =

Then a new check made by Eng. Rubino brought the total of batteries missing to n° 18.=

Date 26 June 1945

SUBJECT : Equipment Operation

TO : Mr. F.O. GRIFFITH, Highway Equipment Officer
Rome.

Ref. to what I reported to you yesterday by telephone, it is necessary that the Italian Ministry of Public Works give proper instructions to the Genio Civile in this matter of Highway Equipment.

I talked last night with Dott. Ing. Casalini Ispettore Generale of the Compartimento of the Genio Civile, and his assistant Dott. Ing. Zambelli, Ispettore of the Genio Civile about this and they, too, don't seem to have received any clear instructions from the Ministry. Since the A.M.G. Region has closed and is moving out I deem it better that such instructions be given to them for Ing. Giunta by the Ministry and not by the Regional Engineer. That will be easier, too, if handled directly between your Office and the Italian Ministry.

I must draw your attention to the fact that they don't seem to have understood that they are not helping us in our job, but we are helping them in theirs.-

Lack of proper instructions from the Ministry may produce lack of understanding here, what will be easily avoided if such instructions be given at once clearly and definitely.-

I am going along with Ing. Giunta quite well; you know that he is a capable and efficient man, but I can't blame him if the real policy of this whole matter of equipment issues and operation is not clear to him yet, since he only received a copy of Col. Thompson's letter 078/3/PWU, dated 5 April 45 and, as far as I know, no further instructions from his Ispettore Compartimentale or Ministry.-

I have mentioned this matter myself to Ing. Reggiani this morning by telephone.

TRADUZIONE.

Riguardo a quanto Vi ho riferito ieri per telefono, è necessario che il Ministero dei LL.PP. impartisca opportune istruzioni al Genio Civile in questa materia del macchinario stradale.

Ho parlato ieri sera di questo con il Dr. Ing. Casalini, Ispettore Generale del Genio Civile per questo Compartimento, e con il suo assistente Dr. Ing. Zambelli, Ispettore del Genio Civile; e sembra che neppure essi abbiano ricevuto dal Ministero chiare istruzioni. Poichè la Regione A.M.G. ha chiuso e sta per partire, ritengo preferibile che tali istruzioni per l'Ing. Giunta vengano date loro dal Ministero piuttosto che dall'Ingegnere Regionale A.M.G. - Ciò sarà anche più facile se trattato direttamente tra il vostro Ufficio ed il Ministero Italiano.

Devo attirare la Vostra attenzione sul fatto che non sembra abbiano compreso che non essi stanno aiutando noi nel nostro lavoro ma bensì noi stiamo assistendo loro.

Mancanza di adeguate istruzioni del Ministero potrebbe produrre mancanza di comprensione qui, il che sarà facilmente evitato, se tali istruzioni siano impartite subito con chiarezza ed in maniera definitiva.

L'Ing. Giunta ed io andiamo avanti insieme molto bene; Voi sapete che è persona molto capace ed efficiente, e non posso biasimarla se la reale posizione di tutta questa materia della distribuzione ed operazione del macchinario non gli è ancora chiara, dato che egli ha solo ricevuto copia delle istruzioni del Col. Thompson (Lettera 078/3/PWU del 5 Aprile 1945) e per quanto mi risulta, non altre ulteriori istruzioni dal suo Ispettore Compartimentale o dal Ministero.-

Ho fatto cenno io stesso di quanto sopra all'Ing. Reggiani questa mattina per telefono.

Florence, Tel. 1523 - Ext. 37 -

TO : Ing. Giunta, Chief Engineer USVS, Florence
SUBJECT : Equipment Operations and Storage.

REF : AD/7

DATE : 7 JUNE 45 -

In order to avoid any misunderstandings and improve the present situation, I deem it useful to outline to you the following directions:

According to letter AD/7 dated 1st of May 45 from Mr. Griffith, you have to take over immediately operation of the equipment, for which you have already signed the Memorandum receipts for the equipment (one Primary and one Secondary crusher and one compressor) at Cortona quarry and for other six compressors, memorandum receipts will be submitted to you as soon as possible.

The equipment which was or will be transferred to Florence, will be issued to you according to Mr. Griffith's instructions and will be stored by you in your store-house and yard.

Spare parts and tools for all equipments will be collected and stored in your other store-house and issued to you, after having checked it and prepared the inventory.

The equipment which was or will be shipped to Florence, will be received and stored by you; all cases or boxes will be opened by your personnel and the equipment issued to you, or transferred elsewhere, according to instructions.

It is therefore necessary that you give to Geometra Dabene and Signor Armichiarri particular instructions to enable them to fulfill their respective tasks with some personal initiative and to organize their work more satisfactorily.

I don't want to interfere with the organization of your offices, but I feel that Signor Dabene is not yet completely aware of what must be done, as quickly as possible, to operate all equipments or at least doesn't show initiative enough to this and that Signor Armichiarri needs more help to do his part of this job. He is working very hard, but cannot do too many things at the same time.

In order to avoid any misunderstandings and improve the present situation, I deem it useful to outline to you the following directions:

According to letters AD/7 dated 1st of May 45 from Mr. Griffith, you have to take over immediately operation of the equipment, for which you have already signed the Memorandum receipts: for the equipment (one Primary and one Secondary crusher and one compressor) at Corfona quarry and for other six compressors, memorandum receipts will be submitted to you as soon as possible.

The equipment which was or will be transferred to Florence, will be issued to you according to Mr. Griffith's instructions and will be stored by you in your store-house and yard.

Spare parts and tools for all equipments will be collected and stored in your other store-house and issued to you, after having checked it and prepared the inventories.

The equipment which was or will be shipped to Florence, will be received and stored by you; all cases or boxes will be opened by your personnel and the equipment issued to you, or transferred elsewhere, according to instructions.

It is therefore necessary that you give to Geometra Dabbeni and Signor Armichiarri particular instructions to enable them to fulfill their respective tasks with some personal initiative and to organize their work more satisfactorily.

I don't want to interfere with the organization of your offices, but I feel that Geom. Dabbeni is not yet completely aware of what must be done, as quickly as possible, to operate all equipments or at least doesn't show initiative enough to this end that Signor Armichiarri needs more help to do his part of this job. He is working very hard, but cannot do too many things at the same time. You have at present at your disposal one jeep, one light truck, three 3-Tonners and one tractor-truck with trailer. These vehicles have been assigned to you for the operation of this permanent. It is necessary that all these vehicles be used for this particular job, first of all, according to its necessities.

Please give orders so that Geom. Dabbeni and Sign. Armichiarri may use them, according to your instructions and under your control, as 1st priority; any time you deem that they don't need them or you will give them some other transport, you will let somebody else use these vehicles for different purposes.

(1)

I have given to both of them the instructions, which I received from Mr. Griffith; it is now their task to submit to you for approval their schemes to work them out and their needs, while all difficulties, which they may anticipate, will be reported to this office as soon as possible without waiting until such difficulties have actually arisen.

Will you please submit to this office every Sunday morning a weekly report in two copies covering the activity in the proceeding week of your office in this matter of highway equipment.

Please have painted, as soon as possible, on each item of equipment which has been issued to you our Plant Number as indicated in the Memorandum Receipt, like the numbers already painted on the 3 Tonners and trailer.

TRANSLATION

Alloscopo di evitare equivoci e migliorare l'attuale
situazione, ritengo conveniente di esporle in breve le ~~1979~~
direttive:

In conformità alle lettere AD/7 di Mr. Griffith in data
1 Maggio 45, Ella deve provvedere immediatamente a prendere in
consegna e far funzionare con il suo personale il macchinario per
cui ha firmato i Memorandum receipts; per l'altro macchinario
(un frantocio primario e un secondario e un compressore) nello esre
di Cortona e per altri 6 compressori, li saranno rimessi i memo-
randum receipts al più presto possibile.

Il macchinario che è stato e sarà trasferito a Firenze,
sarà consegnato secondo le istruzioni di Mr. Griffith, al suo ufficio
che provvederà al suo ricovero nel Magazzino.

I pezzi di ricambio ed attrezzi per tutti i macchinari de-
vono essere trasportati e raccolti nell'altro magazzino presso
la Casa Camponiere e verranno trasferiti al suo ufficio dopo che
sare statti controllati e inventariati.

Il macchinario, che è stato o sarà spedito a Firenze,
sarà ricevuto e ritrovato dal suo ufficio; tutte le scuse e gar-
anzie saranno aperte dal suo personale ed il macchinario assegnato
al suo ufficio o trasferito altrove secondo le istruzioni.

D'pertanto necessario che Ella impartisca speciali instru-
zioni al Geom. Dabbene e al Sig. Aranchiari per metterli in grado
di adempiere ai loro rispettivi compiti espliando una certa iniziati-
tiva personale e di organizzare il loro lavoro in modo più soddisfa-
cente.

(2)

Non desidero di interferire nell'organizzazione dei miei uffici, ma ho l'impressione che il Geom. Dabbene non si sia ancora reso completamente conto di quello che deve essere fatto, al più presto possibile, per far funzionare tutti i macchinari o che almeno non dimostrò abbastanza iniziativa a tale scopo e che il Sig. Armichiari ubbisogni di maggiore aiuto per fare la sua parte di questo lavoro. Egli lavora molto intensamente, ma non può fare troppe cose allo stesso tempo.

Ella ha sua disposizione attualmente una jeep, un camioncino, 3 autocarri da 3 ton. e un trattore con rimorchio. Questi veicoli le sono stati assegnati per il funzionamento del macchinario in questione. Occorre che tutti questi veicoli siano usati, prima di tutto, per questo lavoro, secondo le sue necessità.

La prego di impartire ordine affinchè il Geom. Dabbene e il Sig. Armichiari li possano adoperare, secondo le sue istruzioni e sotto il suo controllo, con assoluta precedenza; ogni qualsivolta Ella ritenga che non occorrano a loro oppure provveda ad assegnar loro altri mezzi di trasporto, Ella autorizzerà altre persone ad impiegare tali veicoli per scopi differenti.

Ho trasmesso ad entrambi le istruzioni che ho ricevuto da Mr. Griffith; è ora loro compito di sottoporre a lei per l'approvazione le loro proposte per l'attuazione ed i loro bisogni, mentre tutte le difficoltà presumibili dovranno essere segnalate a questo ufficio appena possibile, senza aspettare che tali difficoltà si siano effettivamente ormai presentate.

Le prego di trasmettere a questo ufficio, ogni domenica mattina, una relazione settimanale, in due copie, sull'attività del suo ufficio nelle precedente settimana per quanto riguarda il macchinario stradale di cui si tratta.

La prego inoltre di far dipingere, al più presto possibile, sopra ogni singolo macchinario che le è stato trasferito, il nostro Numero di Impianto (Plant Number); come indicato nel rispettivo Memorandum receipt, analogamente ai numeri già dipinti sui tre autocarri e sul rimorchio.

MEMORANDUM

FOC/BS

REFERENCE : 202/PWU.
SUBJECT : Tires.
TO : H.H. Townsend, Civilian A.M.G.

22 April 1945

1. Ing. Posso, is reporting to you for assistance in the selecting and issue of 129 salvaged tires for which he has the necessary requisitions.

2. You are directed to select 12-600x16 jeep tires from this issue for your asphalt kettles. Ing. Posso will wait for an assist in the changing of the tires for the civilian tires with which your kettles are now equipped and will bring the civilian tires, without tubes, to Rome.

3. The least possible time should be used in this tire change so as not to unduly delay Ing. Posso who is urgently needed in Rome.

SUBJECT: Construction Equipment.

TO : Public Relations Branch (att: Major Leacacos)

1. Nearly a year ago the Public Works and Utilities Sub-Commission, with the approval of A.F.H.Q., placed a requisition in the United States for approximately 4,000 tons of heavy highway construction equipment including trucks and other transportation equipment.

2. In view of the need for this equipment in other theatres we were not able to obtain any of this equipment until very recently. The following is a list of equipment which has actually arrived in Italian ports:-

- 3 Trailers - 8 ton capacity
- 3 Trailers - 16 ton capacity
- 2 Carry all Scrapers - 8 Cu.Yd. Capacity
- 17 Cargo trucks - 3 tons
- 3 Trucks - 1 $\frac{1}{2}$ ton
- 1 Air compressor
- 5 Crushing and screening plants
- 26 Asphalt Kettles
- 1 Asphalt mixing plant complete.

Some of this equipment has been assembled and is already in use. The other equipment is being assembled and made ready for operation and will be put in use as soon as it is assembled.

3. The equipment which has already arrived represents approximately 10% in tonnage. About 10 to 15% more has been assigned and is supposed to be on the way to Italy, but we have no notice as yet of any further arrivals.

4. It should be pointed out, however, that so far ~~1326~~ the equipment such as trailers and scrapers have arrived here without the power unit to move these pieces of equipment. Without these

Highway Equipment

In the early months of 1944 this Sub-Commission requisitioned approximately 4000 tons of highway construction equipment for use in connection with the Military Highway. Considerable difficulty was encountered in having the various items made available as Military requirements had first priority on stocks but in February the first shipments arrived. To date the following items have been delivered:

- 3 Trailers - 8 ton capacity
- 3 Trailers - 16 ton capacity
- 2 Caway all scrapers - 6 Cu.Yd. Capacity
- 17 Cargo trucks - 3 tons
- 3 Trucks - 1 $\frac{1}{2}$ ton
- 1 Air compressor
- 5 Crushing and screening plants
- 26 Asphalt Kettles
- 1 Asphalt mixing plant complete.

The above items, aggregating approximately 375 Tons of the total, are now in use on operating projects or are being assembled for immediate use.

Information has been received on the remaining items which indicate that deliveries can be expected during April and May and completed by the end of May.

SUBJECT : Rock Crushers.

TO : Chief Public Works Division AC, APO 394.
(Attention: Lt. Colonel V.S. Thompson, PCE)

1. Please be advised that Penbase's road maintenance program for the immediate future calls for gigantic quantities of crushed stone.
2. It will be impossible for Penbase to meet this demand with the present equipment they now have on hand, as much of this equipment will be withdrawn from existing quarries and shipped forward.
3. Hence it is imperative that we install AC rock crushing plants in civilian quarries which are likely to be evacuated by Penbase if we do not want our road program to suffer.
4. This matter has been discussed with Lt. Col. M. Broyles, Chief Construction Branch, PBS, who informs me that the minimum requirements will be 10 complete sets, i.e. 10 Primary and 10 Secondary units with their accompanying air compressors.
5. It is my understanding that an additional shipment of rock crushing plants and air compressors is expected shortly.
6. May I have your permission to allow Penbase to set these up for us in strategic quarries as with the previous group?
