19 July 45.

Subject: Completion of Energie Electric Transmission Line  
between Austria and Italy.

To : Regional Commissioner, Venezia Region.  
Attn: Capt. P.M. Vannoy.

1. Transmitted herewith is a copy of a letter from the Energie-Gesellschaft, dated 9 July 1945, referring to the completion of their electric transmission line between Austria and Italy.

2. As will be noted from our letter to you, dated 5 July, File 245/PWU, Subject: Energy Company - Bolzano, there is no objection from the Public Works and Utilities Sub-Commission to the completion of the line provided that materials and equipment are available, and provided that scarce items of both are not obtained by taking them from other projects which are important. From back here, however, it seems that you may find more urgent uses for material and equipment, than for the reconstruction of the Energie Line.

3. The one point in their letter which suggests needed action at this time covers the material in storage. It is recommended that assistance be given in reducing the possibility of these materials being lost through theft.

4. Will you kindly inform the Energie-Gesellschaft that their 9 July letter has been received by this Sub-Commission, and also tell them of our thoughts here, together with any modification which you may have, in view of local considerations.

By Command of Rear Admiral STONE:

Bressanone, the 9th Jul 45

RE : 120 KV Transmission line Italy - Austria.

After having conferred with the Engineering Section of the Provincial AMG Bolzano on account of the construction of the above mentioned line we were referred to you as competent.

You will find here enclosed our report from Juni 6th to the Lt. Col. Thompson of the AMG Bolzano.

It treats of the permission to finish the 120 KV line from Bressanone (Alto Adige - Italy) to Innsbruck (Austria). This line was constructed by us during the war by order and with the aid of the German board controlling the electrical energy.

The purpose of this line, 72.6 Km = 45 miles long, at two trifase Transmissions systems with about 160 MVA capacity is the connections to the 120 KV power net of Alto Adige (and also the power net of nord Italy) with that of Nord Tirol (and also the power net of south Germany) to the exchange of the energy (to better utilize the electrical Plants, economy of coal and its transport).

This line is situated in two different States. The construction has much progressed, the greatest part of the materials - made after orders from Italy - for the finishing of one system is in the store rooms and staples (see report).

6226

The "Energie" is a company founded in Bolzano conforming to Italian law. Its partners and managers are Austrians and returned in their country at the end of April. The bancacconnt of ca 6.000.000 Lire was blockaded.

The direction of the construction of the line is in Bressanone (Prov. Bolzano) and is enabled and legaly authorized to continue the construction.

The direction of the construction asks the Allied Commission:

- 1.) to consent and to approve the finishing of the Transmission line and the continuation of these works.
- 2.) if you consent we suppose that the Provincial AMG, competent to the single questions, will help us, that the money will be liberated and that the liberty of actions will be confirmed to us.
- 3.) If you do not consent or if you defer we should collect the materials in stores without any responsability for loss, theft and damages, the inspections of all the stores being very difficult. The Finance office has to liberate the money for the costs of the stores.
- 4.) will you give us a written confirmation that the material for the 120 KV line will not be used for other plants.
- 5.) For the purpose of discussing the technical particularities especially the connection if the line we should advise an interview with on of your experts.

As the works in the montains can only be executed in summer we beg you for an early answer.

We are at your disposal for any further information you may require.

Sincerely

Copy : to the Engeneering Section

5 July 1945

Subject : Energy Company - Bolzeno  
(Energie Gesellschaft - Bozen)To : REGIONAL COMMISSIONER VENEZIA REGION  
(Att. Regional Engineer)

1. With reference to letter 27 June 1945, File PMV/pp from Capt. Vannoy concerning the completion of the high voltage transmission line between Bressanone (Italy) and Innbruck (Austria) we comment as follows :

2. It should be remembered that all materials in connection with transmission line construction are in extremely short supply and can only be allocated to work which is necessary for the exchange of power.

3. We understand that the electrical situation in Austria is satisfactory and we also believe that allowing for seasonal changes and export to Central Italy the whole of the power in Northern Italy can be absorbed.

4. Under these circumstances the completion of the line to Innsbruck does not justify using materials which are presently in short supply but if the companies are able to proceed with the work without interfering with the other work which they have in hand we see no objection to their completing the line if they so desire.

By Command of Rear Admiral STONE,

SUBJECT : Energy Company - Bolzano  
 TO : Chief Elect. Div., Public Works & Util. S/C  
 Headquarters, Allied Commission

Refer to your letter of 5 July Reference 245/PWU, to the Regional Commissioner, Venetia Region paragraph 4.

The Allied Commission has jurisdiction only in Italy and can therefore authorize work only in its territory. The completion of the line from Bressanone to the Austrian border would accomplish nothing unless some effort was made to complete the Austrian end of the line.

The Bolzano Province A. M. G. has frozen all funds of the Energy Company due to political implications of the venture and the members of the company. This action appears to be well founded. It has forbidden the disposal of the company's materials which are now located in the Province of Bolzano.

The company had no other work in hand since, as I reported before, it was organized after the Italian armistice for the sole purpose of connecting the power grid of Italy with that of Austria and Germany.

I suggest that this subject be included on the agenda of the 30 August meeting of the Advisory Committee on Electric Power (Northern Italy). Ing. Maestranzi of Bolzano, who is a newly appointed director of the company, would welcome an invitation to present the facts of the project.

TO: Chief Electrical Division - Public Works & Utilities S/C  
H.M. Allied Commission

Attached is a translation of reports submitted by the Energy Gesellschaft, Bozen to the Bolzano Province A.O.G. A field inspection has revealed that the estimates and reports concerning the present status of the construction of the transmission line are essentially correct.

Information has been obtained that this project was conceived and dictated by some political or military force of German origin.

A brief review of the attached tables of Hydroelectric Plants in Bolzano, Belluno and Trento provinces indicates the large amount of power which the Energy Company was attempting to transmit into Germany.

I wish to point out that the present power situation in Northern Italy is very good. It will be from three to five years before industry, transportation, etc., can be rehabilitated sufficiently to require the full output of these generating stations. At least for the present, Italy will not benefit by the completion of this line.

Also attached is a letter of transmittal from the Deputy Provincial Commissioner of Bolzano requesting negotiation of a

Subject : Energy Company - Bolzano **VENEZIA REGION A M G**  
Energie Gesellschaft - Bozen

To : REGIONAL COMMISSIONER VENEZIA REGION  
(through Regional Engineer - Att. Capt. P.M. Vennoy)

1. Ref. 245/PWU/5 July 1945 - your PMV/pp/27 June 1945.
2. Our letter 5 July 1945, file 245/PWU set forth the views of this Sub-Commission on the completion of the Bressanone (Italy) to Innbrock (Austria) electric transmission line which had been started by the German authorities.
3. In order that we will be informed, the position and attitude of the A.C. of Austria should also be made known since both Italy and Austria will be effected. It is requested that you obtain all information possible on the following points :
  - (a) Is it desired by A.C.C. in Austria that the transmission line be completed and if completed what would be, in their opinion, the expected schedule for transfer of power?
  - (b) Will transformer and other necessary substation facilities be available in Austria for this service? Also would it be desirable to complete both circuits?
  - (c) It is understood that all material for this line was fabricated in Italy from Italian stocks and not completely paid for by the Germans. If the line is to be completed in accordance with original plan it will be a joint affair between Austria and Italy with A.C.C. approval. In such a case what is Austria's position as to assistance in the completion of the work?
  - (d) Assuming that neither Italy nor Austria consider the line a practical or necessary measure it would be desirable to dismantle the line and return the materiel to Italy. What arrangements are necessary with A.C.C. in Austria to effect such a procedure?

6219

All material can be used in Italy for rehabilitations of other important transmission lines here.

- (e) What group of personnel or organization is presently authorized to act in behalf of this project and by what authority. What funds are there available and in whose custody do they exist?
- (f) Any other information that you consider necessary in a settlement and final disposition of this project and the material involved.

4. Would you therefore arrange to visit the Allied Commission authorities in Austria and discuss the matter in person.

5. Permission to travel in Austria should be taken up with the 86th Area Commanders Office.

By Command of Rear Admiral STONE,

*George Parker*

ENGLISH COMEDAY LIMITED  
E O Z C L

-Trized, June 5th 1945

Construction of the 120,000 KV line Brixen (Bressano) - Innsbruck

The line is built on square iron masts with iron cement foundations.  
Double line for every three conducting ropes with 307 mm<sup>2</sup>. For the time  
being three conducting ropes are being suspended.

Total length km 72.6

Southern stretch : From the power station Brixen (Bressano) to the  
Brenner (Trentino) frontier length km 42.8 with  
172 masts.

Northern stretch : From the Brenner (Trentino) frontier to Innsbruck  
(substation Vilten) length 29.8 km with 111 masts.

Progress of the construction on May 1st 1945

a) Southern stretch -

|                                      | <u>Finished</u> | <u>to be finished</u> |
|--------------------------------------|-----------------|-----------------------|
| Foundations for masts                | 171             | 7                     |
| Erecting of masts                    | 165 (68% - 95%) | 7 (36% - 52%)         |
| Conducting rope (3 phases) suspended |                 |                       |
| Brixen - Sterzing (Vipiteno)         | 29 km           |                       |
| Sterzing - Brenner                   |                 | 13.8 km               |

The iron parts for the 7 masts still to be erected are deposited in the  
workshop, the greater part already bear the foundation of the masts.  
The aluminum conducting ropes, various fittings and isolators for the  
rope-stretch still to be suspended are stored in the works-yard. For the  
foundations of the masts still to be built 12 tons of cement are required.

b) Northern stretch -

|                            | <u>Finished</u>     | <u>to be finished</u> |
|----------------------------|---------------------|-----------------------|
| Foundations for masts      | 74 1/2 (328 to 65%) | 0                     |
| Erecting of masts          | 75 1/2 (45 to 65%)  | 36 1/2 (45 to 65%)    |
| Conducting rope (3 phases) |                     | 20                    |

The line is built on spaced iron nests with iron cement foundations. Double line for every three conducting ropes with 307 mm<sup>2</sup>. or the time being three conducting ropes are being suspended.

Total length km 72.6

Southern stretch : from the power station Brixen (Bressanone) to the Brenner (Brennero) frontier length km 42.8 with 172 nests.

Northern stretch : from the Brenner (Brennero) frontier to Innsbruck (substation Wilten) length 29.8 km with 111 nests.

Progress of the construction on May 1st 1945

a) Southern stretch -

|                                      | <u>finished</u>  | <u>to be finished</u> |
|--------------------------------------|------------------|-----------------------|
| Foundations for nests                | 171              | 1                     |
| Brackets of nests                    | 165 (64% to 95%) | 7 (36% - 5%)          |
| Conducting rope (3 pieces) suspended |                  |                       |

Brixen - Sterzing(Vipiteno) 29 km

Sterzing - Brenner  
The iron parts for the 7 nests still to be erected are deposited in the works-yard, the greater part already near the foundations of the masts. The aluminum conducting ropes, various fittings and isolators for the rope-stretch still to be suspended are stored in the works-yard. For the foundations of the nests still to be built 12 tons of cement are required.

b) Northern stretch -

|                                     | <u>finished</u>     | <u>to be finished</u> |
|-------------------------------------|---------------------|-----------------------|
| Foundations for nests               | 74 1/2 (328 b. 66%) | 36 1/2 (nearly 50%)   |
| Brackets of nests                   | 0                   | 29.8 km               |
| Conducting rope(3 pieces) suspended |                     |                       |

The iron parts for the 36 1/2 masts still to be erected are in the works-yard, but some parts are missing owing to damage through bombs on the transport. Reserve parts are in Brixen, Treviso and Vobarno.

The aluminum power conducting rope for the 29.8 km stretch still to be hung up is stored in the works-yard; for 15.2 km the rope is already laid out for suspension along the line. Various fittings and isolators are also to be found in the stores of the works-yard.

ENERGIE Company Limited

D o z e n

Brixen, June 4th 1945

Sir,

We refer to our visit of June 1st 1945 and we have already drawn up the desired report in German concerning the purpose and situation of the 120,000 V power conducting line from Brivio to Innsbruck.

Yesterday our director Mr. Rieder, engineer, was called to Mr. Mestruzzi, engineer, director of the Azienda Elettrica Comunale of Bolzano ( Electric Plant of Bolzano ). Mr. Mestruzzi declared to have been appointed commissary director of the Energia Company Limited by the Prefect.

Since you wished to receive the above-mentioned report as soon as possible we are forwarding it to you and at the same time beg to inform you of the imminent change in the direction of this Company.

In consideration of the extent of the plants concerned it would have to be examined if a commissary director, in case he should necessarily have to be appointed, could not be selected among the actual managers of the Company, thus guaranteeing a quicker proceeding of all business transactions.

Furthermore the fact that both the plants, as well as the property of the Company are situated in two different States, is to be considered when appointing a commissary director.

120,000 V power conducting line from Innsbruck to Leestrenzi, our director Mr. Fieder, engineer, was called to Mr. Bolzano ( Electric Plant of Solzeno ). Mr. Leestrenzi declined to have been appointed commissary director of the Dienerie Company Limited by the Prefect.

Since you wished to receive the above-mentioned report as soon as possible we are forwarding it to you and at the same time beg to inform you of the imminent change in the direction of this Company.

In consideration of the extent of the plants concerned it would have to be examined if a commissary director, in case he should necessarily have to be appointed, could not be selected among the actual managers of the Company, thus guaranteeing a quicker proceeding of all business transactions.

Furthermore the fact that both the plants, as well as the property of the Company are situated in two different States, is to be considered when appointing a commissary director.

BETRIFF:

Wir beziehen uns auf unseren Besuch vom 1.6.45 und haben den gewünschten Bericht über Zweck und Baustand der Leitung in deutsch bereits abgefaßt.

Samstag wurde unser Baulerter, Herr Dipl.Ing. Rieder, zum Direktor Dr.Ing.Maestranzi der Azienda Elettrica Comunale Bolzano gerufen.

Herr Maestranzi gab an, vcm Präfekten zum kommissarischen Leiter der Energie Ges.m.b.H. ernannt worden zu sein.

Da Sie den Bericht dringend haben wollten, werden wir Ihnen denselben wunschgemäß überreichen und machen Sie hiemit ordnungshalber auf obgenannte bevorstehende Änderung in der Leitung der Gesellschaft aufmerksam.

Infolge des Umfanges der Anlagen wäre zu prüfen ob nicht ein eventuell vorgeschriebener kommissarischer Leiter aus den ehemaligen Mitarbeitern der Gesellschaft gewählt werden sollte um schnellere Abwicklung der Geschäftsführung zu gewährleisten.

Bei der Ernennung eines kommissarischen Leiters wäre zu berücksichtigen, daß die Anlage und das investierte Vermögen der Gesellschaft sich in zwei Staaten befindet.

Brixen, June 4th 1945  
Re : Out-door switchplants for connecting to the 120.000 V line from  
Brixen to Innsbruck

The extenstions of the line are connected in the switchplants of the power station in Brixen and in the substation Innsbruck.

Switchplant Brixen. - The plans for the connection are ready. They were worked out in consideration of the economical importance of the line and the then reigning political circumstances. If the now different conditions require a change of the plans the authorities are asked to make such proposals.

According to the plan already worked out the greatest part of the material required for the connection of the single line is in Brixen; about 1000 kg are in Trento, 25000 kg in Milan. For this line 150.000.- have still to be paid. The work has already begun. There is wanted :

- a) confirmation from the ALG concerning the release of our materials in Brixen, Trento and Milan;
  - b) assignment of 6000 kg cement from Trento;
  - c) permission to transport the materials from Trento and Milan to Brixen;
  - d) release of blocked amounts by the ALG for the payment of accounts and the workers' wages (about 300.000.- for the single line).
- The single line can be connected in two months from the date of the definite settlement of the plans with the competent authorities.
- Substation Innsbruck (Tillten). The connection will be executed by the TIWAG (Tiroler Wasserstraftwerke A.G.), Innsbruck with material partly furnished by us.

The extremities of the line are connected in the switchboards of the power station in Brizzi and in the substation Innsbruck.

Switchboard Brizen. - The plans for this connection are ready. They will be worked out in consideration of the economic importance of the line and the then reigning political circumstances. If the now different conditions require a change of the plans the authorities are asked to make such proposals.

According to the plan already worked out the greatest part of the material required for the connection of the single line is in Brizzi: about 1000 kg are in Trento, 25000 kg in Milan. For this there lire 150.000.- have still to be paid. The work has already begun. There is wanted:

- a) connection from the ANG concerning the telese of our materials in Brizzi, Trento and Milan;
- b) assignment of 6000 kg cement from Trento;
- c) permission to transport the materials from Trento and Milan to Brizzi;
- d) release of blocked amounts by the ANG for the payment of accounts and the workers' wages (about lire 200.000.- for the single line).

The single line can be connected in two months from the date of the definite settlement of the plans with the competent authorities.

Substation Innsbruck (Wilten). The connection will be executed by the TITAG (Tiroler Wasserkraftwerke A.G.), Innsbruck with material partly furnished by us.

Should the work not be continued we shall have expenses having to complete the already begun fittings and because of the reduction of value and destruction of materials that can not otherwise be utilized.

Brixen, den 4. Juni 1945

**BETRIFF:** Schaltanlagen für den Anschluß der 120.000 Volt Leitung  
Brixen - Innsbruck.

Die zwei Enden der Leitung werden in die Schaltanlagen des Kraftwerkess  
Brixen und des Umspannwerkes Wilten eingebunden.  
Schaltstelle Brixen. Für den Anschluß liegen die Pläne bereit. Diese

wurden mit Rücksicht auf die wirtschaftliche Be=  
fertigt. Wenn die eingetreteten andersartigen politischen Verhältnisse ange=  
zeigt werden, so werden entsprechende Vorschläge seitens  
der Behörden gemacht werden.

Für den Anschluß der Einfachleitung unter Zugrundelegung der Ausführung  
entsprechend der vorhandenen Plänen, ist der größte Teil des Materials  
in Brixen. Etwa 1000 kg liegen in Trient und 25000 kg in Mailand, dafür  
sind etwa noch 150.000 Lire zu bezahlen. Die Arbeiten sind bereits in  
Angriff genommen worden. Man benötigt:

- a) Bestätigung seitens des AMG betreffend Freigabe unseres in Brixen,  
Trient und Mailand liegenden Materials.
- b) Zuweisung von 6000 kg Zement aus Trient
- c) Transportfreigabe für das Material von Mailand und Trient nach Brixen.
- d) Freigabe seitens des AMG der Beträge für die Bezahlung der Lieferanten=  
rechnungen und Arbeitszeit.
